1.1 Purpose of Scoping Report

The Santa Clara Valley Transportation Authority (VTA) is serving as the Lead Agency under the California Environmental Quality Act (CEQA) for VTA's Bay Area Rapid Transit (BART) Silicon Valley—Phase II Extension Project (Phase II Project). As the CEQA Lead Agency, VTA issued a Notice of Preparation (NOP) for the 3rd Supplemental Environmental Impact Report (SEIR3) and initiated an environmental scoping period from January 30 to March 2, 2015. The SEIR3 will update information presented in the previous environmental documents for VTA's BART Silicon Valley Program (formerly known as the BART Extension to Milpitas, San Jose, and Santa Clara), specifically the 2004 BART Extension to Milpitas, San Jose, and Santa Clara Draft Environmental Impact Statement/Environmental Impact Report (Draft EIS/EIR), 2004 BART Extension to Milpitas, San Jose, and Santa Clara Final Environmental Impact Report (FEIR), the 2007 BART Extension to Milpitas, San Jose, and Santa Clara Draft and Final Supplemental Environmental Impact Report (SEIR1), and the 2010 BART Silicon Valley Phase I – Berryessa Extension Draft and Final 2nd Supplemental Environmental Impact Report (SEIR2).

The SEIR3 will be prepared as a joint document with a Supplemental Environmental Impact Statement (SEIS) that will be prepared in accordance with the National Environmental Policy Act (NEPA). The Federal Transit Administration (FTA) will serve as the federal Lead Agency for the SEIS. The purpose of the scoping report is to document and consolidate the comments received on the scope of the project, the alternatives to be considered, and the environmental issues to be addressed in the SEIS/SEIR3.

1.2 Project Background

VTA's BART Silicon Valley Program is the extension of the BART system from Fremont through Milpitas and San Jose to Santa Clara. The 16-mile-long extension of the BART system would begin at the Warm Springs Station in Fremont, continue south along the Union Pacific Railroad (UPRR) to Santa Clara Street in San Jose, continue west in a subway through downtown San Jose, and terminate at grade near the Caltrain Station in Santa Clara. This project, previously named the Silicon Valley Rapid Transit Corridor Project (SVRTC Project), was analyzed in the Draft EIS/EIR, FEIR, and SEIR1. The FEIR and FSEIR1 were certified by the VTA Board of Directors in December 2004 and June 2007, respectively.

Although VTA was committed to building the full 16-mile extension, the state of the economy in 2010 required that the BART Silicon Valley Program be built using a phased-construction approach. The BART Silicon Valley Program was split into two phases. VTA's BART Silicon Valley Berryessa Extension (Phase I) Project consists of the first 10 miles of the extension, beginning from the planned terminus at the approved Warm Springs Station in Fremont through Milpitas to the Berryessa neighborhood in San Jose. Phase I includes the Milpitas and Berryessa Stations. The SEIR2 addressed design changes since certification of the FSEIR1 and evaluated the associated environmental impacts applicable to the Phase 1 Project only. The FSEIR2 was certified by the VTA

Board of Directors in March 2011. Phase I is currently under construction and is scheduled to begin operation in late 2017.

The Phase II Project is the remaining 6 miles of the BART Silicon Valley Program and would begin at the terminus of the Phase I Project and end near the Santa Clara Caltrain Station. The potential environmental impacts of the Phase II Project are now being considered. A description of the Phase II Project is provided in Section 1.3, *Project Description and Location*.

1.3 Project Description and Location

The Phase II Project would be constructed in the cities of San Jose and Santa Clara in Santa Clara County. The 6-mile-long Phase II Project would begin at the terminus of the Phase I Project east of U.S. Highway 101 (U.S. 101) and south of Mabury Road in San Jose. The Phase II Project would be at grade where it connects to the Phase I Project and then descend into an approximately 5-mile-long subway tunnel that continues through downtown San Jose and terminates at grade in Santa Clara near the Santa Clara Caltrain Station (see **Figure 1**). Four stations are proposed as part of this Phase II Project: three in San Jose (Alum Rock, Downtown San Jose, and Diridon Stations), and one in Santa Clara, (Santa Clara Station). Parking structures are proposed at the Alum Rock and Santa Clara Stations; "kiss-and-ride" (passenger drop-off) facilities are proposed at Alum Rock, Diridon, and Santa Clara Stations. The station facilities would include electrical and ventilation systems as well as communication equipment. A maintenance yard (Newhall Yard maintenance facility) is proposed near the Santa Clara Station. Passenger service for the Phase II Project would start in 2025 assuming funding is available.

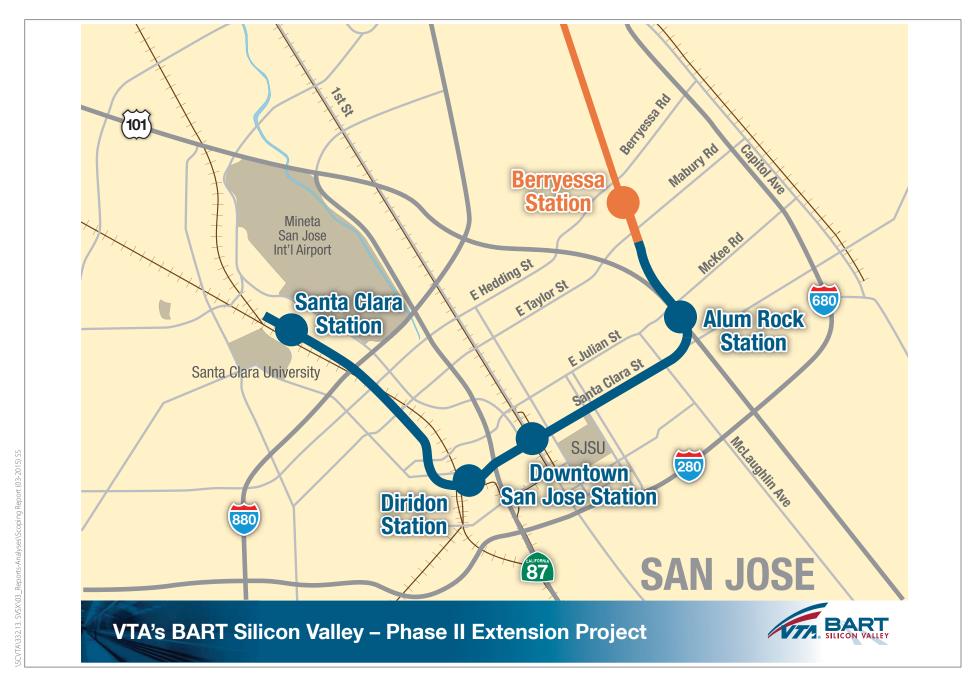

Figure 1 Project Location Map

2.1 Environmental Process Background

The scoping process for the SVRTC Project originally began in January 2002 when VTA distributed an NOP to advise agencies, interested parties, and the public that an EIR would be prepared for the project. In February 2002, VTA conducted scoping meetings for SVRTC Project. In March 2004, the Draft EIS/EIR was released for public review in accordance with federal and state law. Following circulation of the Draft EIS/EIR, it was determined that the opportunity for securing federal funds at that time was limited. The VTA Board of Directors certified the Final EIR on December 9, 2004.

Following certification of the FEIR, project design continued and necessitated the preparation of the SEIR1 to evaluate the environmental impacts associated with the design changes. Additional environmental scoping was conducted for the SEIR1. VTA distributed an NOP for SEIR1 in July 2006, and four public scoping meetings were conducted in August 2006. The Draft SEIR1 was released for public review in January 2007, and the VTA Board of Directors certified the Final SEIR1 on June 7, 2007.

After certification of the SEIR1, design continued through the Preliminary Engineering phase (35% design level) and progressed to an approximately 65% design level. The federal environmental document, the Environmental Impact Statement (EIS), was processed separately. The Draft EIS was released on March 13, 2009 and included two build alternatives: the 10-mile Berryessa Extension Project (BEP) Alternative and the 16-mile Silicon Valley Rapid Transit Project (SVRTP) Alternative. FTA signed the Record of Decision for the 10-mile BEP Alternative (now called the Phase I Project) on June 24, 2010. VTA then initiated the preparation of the SEIR2 to describe the design changes to the Phase I Project and to disclose the substantive new information that had become available since certification of the SEIR1 in 2007. Additional environmental scoping was conducted for the SEIR2. VTA distributed an NOP for the SEIR2 in August 2010 and conducted one public scoping meeting in September 2010. The Draft SEIR2 was released for public review in November 2010, and the VTA Board of Directors certified the Final SEIR2 on March 3, 2011. As discussed above, the Phase I Project is under construction, and revenue service is forecasted to begin in late 2017.

2.2 3rd Supplemental Environmental Impact Report

The SEIS/SEIR3 will evaluate the impacts of the proposed Phase II Project in light of changes to project design and the regulatory and environmental settings that have occurred since the certification of the FEIR and FSEIR1. Generally, these changes consist of: 1) vertical and horizontal alignment changes, 2) revised station designs and configurations, 3) refinements to the design and location of system facilities, 4) changes in the existing conditions and regulatory setting, and 5) project schedule changes.

The purpose of the SEIS/SEIR3 is to fully disclose the environmental consequences of the proposed changes listed above for the Phase II Project. The SEIS/SEIR3 will determine the extent to which the

design changes associated with the Phase II Project would result in environmental impacts and will discuss actions to reduce or eliminate such impacts.

Probable environmental effects related to the following resource areas will be examined in the SEIS/SEIR3.

- Air quality
- Biological resources and wetlands
- Community services and facilities
- Cultural resources
- Electromagnetic fields
- Energy
- Geology, soils, and seismicity
- Greenhouse gas emissions
- Hazards and hazardous materials
- Land use
- Noise and vibration
- Security and system safety
- Socioeconomics
- Transportation, including transit, parking, pedestrians, bicycles, and traffic
- Utilities
- Visual quality and aesthetics
- Water resources, water quality, and floodplains
- Environmental justice

Impacts resulting from the changes in design and environmental setting since certification of the FEIR and FSEIR1 will be identified for the construction period and long-term operation of the Phase II Project.

2.3 Purpose of the Scoping Process

Federal and state laws require a formal review of projects that may affect the environment. Since certification of the FEIR and SEIR1, the project design has changed, including 1) vertical and horizontal alignment changes, 2) revised station designs and configurations, 3) refinements to the design and location of system facilities, 4) changes in the existing conditions and regulatory setting, and 5) project schedule changes. The SEIS/SEIR3 will evaluate the impacts of these changes. Overall, the SEIS/SEIR3 will update the existing regulatory and environmental setting, analyze the potential impacts from construction and operation of Phase II, and identify mitigation measures to reduce or eliminate potential environmental impacts.

The scoping process for the Phase II Project invited agencies and interested parties to provide input on the Phase II Project, the proposed topics of evaluation and potential impacts, and mitigation measures to be considered. As part of the SEIS/SEIR3 scoping process, VTA conducted three public scoping meetings (on February 12, 17, and 19, 2015) to notice agencies, interested parties, and the public that a Draft SEIS/SEIR3 is being prepared and to initiate public involvement in the environmental review process.

2.4 Scoping Notification

The scoping process for the Phase II Project began with formal agency notification. On January 30, 2015, VTA distributed an NOP to advise interested agencies and the public that VTA intends to prepare an SEIS/SEIR3 for the Phase II Project. VTA distributed the NOP to approximately 225 agencies, elected officials, and interested parties and organizations in the study area.

VTA also notified potentially interested individuals and organizations regarding the scoping process and public scoping meetings for the Phase II Project. VTA used multiple methods to announce the scoping process and public meetings:

- Display advertisements in local newspapers
- Mailings to addresses located in the vicinity of the Phase II Project
- Emails sent to recipients on the VTA emailing list
- News releases posted on the VTA website
- Social media postings on VTA's Facebook page and Twitter account.

The display advertisements ran in the following periodicals: *San Jose Mercury News* (published in the daily newspaper of January 30, 2015), *Santa Clara Weekly* (published in the weekly newspaper of February 4, 2015), *El Observador* (published in the weekly newspaper of February 6, 2015), *VIETNAM* (published in the weekly newspaper of February 6, 2015), *The Korea Times* (published in the weekly newspaper of February 6, 2015), *Philippines Today* (published in the weekly newspaper of February 4, 2015), and *Sing Tao Daily* (published in the daily newspaper of February 6, 2015). VTA distributed approximately 58,000 mailers to addresses located within 0.25-mile of the proposed Phase II Project alignment and within 1-mile of proposed Phase II Project station areas. The mailers were translated into five languages (Spanish, Vietnamese, Korean, Chinese, and Portuguese) and provided an overview of the Phase II Project, information regarding the scoping meetings, and instructions on how to submit comments. Emails were also sent to approximately 1,052 recipients on the VTA emailing list to inform recipients of the scoping meetings.

Information on the Phase II Project, scoping meetings, and instructions on how to provide comments were also posted on the VTA News Release website and on the VTA's BART Project website. Social media postings on VTA's Facebook page and Twitter account also notified the public.

Appendix A includes copies of the NOP, display advertisements, general mailer, and the news release posted on the VTA website.

Report on Scoping Meetings

VTA conducted three formal environmental scoping meetings to gather input and comments prior to the development of the SEIS/SEIR3.

- Environmental Scoping Meeting #1
 Thursday, February 12, 2015, 5:30 7:30 p.m.
 Santa Clara Council Chambers
 1500 Warburton Avenue, Santa Clara, CA 95050
- Environmental Scoping Meeting #2
 Tuesday, February 17, 2015, 5:30 7:30 p.m.

 VTA Customer Service Center
 55 West Santa Clara Street, San Jose, CA 95113
- Environmental Scoping Meeting #3
 Thursday, February 19, 2015, 5:30 7:30 p.m.

 Mexican Heritage Plaza
 1700 Alum Rock Avenue, San Jose, CA 95116

Each public scoping meeting included a sign-in/open house portion of the meeting, where the public could view Phase II Project informational display boards of the alignment and concept exhibits for the proposed stations, and a presentation portion of the meeting during which VTA staff provided an overview of the project and environmental process in PowerPoint format. The display boards and PowerPoint presentation from the scoping meetings are provided in **Appendix B**. Materials provided at the scoping meeting, including handouts, sample comment cards, and sign-in sheets are provided in **Appendix C**.

Following the presentation, formal public comments on the changes to the Phase II Project design since certification of the FSEIR1 and the potential environmental impacts were documented. Oral comments provided at the meetings were transcribed by a court reporter. Written comments were accepted at the meetings and via mail or email to VTA until the comment deadline. **Table 1** presents the number of attendees and comment cards collected at each meeting. Copies of the meeting transcript and written comments received at the scoping meetings are provided in **Appendix D**.

Table 1. Number of Attendees and Comments Collected at Scoping Meetings

	Environmental Scoping Meeting #1	Environmental Scoping Meeting #2	Environmental Scoping Meeting #3
General Public Attendees	39	70	108
Oral Comments	4	5	15
Written Comment Cards Collected	5	18	15

The following is a summary of the key issues raised orally and in writing at the three scoping meetings, as well as comments received by VTA through mail and email. Copies of these comments, including the court reporter transcript and comment cards from the scoping meetings, are provided in **Appendix D**. The key issues raised during the scoping period fall into one of the following three categories.

- Topics and concepts previously analyzed; these will not be re-evaluated in the SEIS/SEIR3.
- Topics and concepts not feasible or outside of the scope of the environmental process; these will not be evaluated in the SEIS/SEIR3.
- New topics and concepts that are feasible and within the scope of the environmental process; these will be evaluated in the SEIS/SEIR3.

4.1 Project Description and Design

General

- Request for Wi-Fi at stations and in trains.
- Consider design interfaces to all other transit options (BART, Caltrain, light rail, bus routes, and future high-speed rail) with a focus on reducing duplication.
- Consider private funding options by selling the naming rights of the proposed stations.
- Discuss station prioritization among the four considered in case of funding limitations.
- Discuss the intermodal interface of BART connections to other existing transit systems in the area, such as VTA's light rail and Caltrain, as well as future planned transit systems such as high-speed rail and bus rapid transit projects.
- Consider design features that would improve the intermodal passenger experience, such as wayfinding and timetable signage, integrated ticketing, and short connection distances by foot or wheelchair.
- Discuss changes to the Phase II Project elements since the 2007 FEIR.
- Discuss changes to on-street parking and whether street parking spaces will be removed in the vicinity of the new BART stations or BART supporting facilities.
- Discuss station access, including connectivity with other transit/modes, usability, placemaking, safety, security, and maintenance.
- Request to have subway under San Fernando Street instead of Santa Clara Street.
- Request for route between various stations and the Downtown San Jose Station to be reduced in length so that travel time is minimized.
- Consider an alignment located under Santa Clara Street near Diridon Station for seamless transfer to and from Caltrain and BART.

Consider ending service at Diridon Station to avoid duplication of service with Caltrain.

Purpose and Need - Ridership Projections

- Describe discrepancies between projected ridership and actual ridership.
- Ridership projections should reflect whether riders transfer from BART to Caltrain at the Diridon Station or at the Santa Clara Station.
- Discuss impact on ridership demand at the Santa Clara Station after Caltrain-to-BART connection is completed at the Diridon station.
- Discuss impact on ridership demand after Caltrain has been electrified.
- Update ridership projections to be consistent with BART's current ridership levels and fleet planning activities.

Alum Rock Station

- Consider keeping 28th Street/Alum Rock Station if there is a funding shortfall.
- Request for a pedestrian and bike path on 28th Street at the Alum Rock Station.
- Request to name this station Alum Rock at 28th Street Station.
- Request to name this station Five Wounds.
- Consider additional areas surrounding the proposed station for BART-related development (use
 of areas from Julian Street to Five Wounds Lane and from U.S. 101 west through the UPRR rightof-way).
- Consider joint development of the ground level (and above) of proposed station for a transitoriented community.
- Consider multiple parking facilities versus a single parking lot and multi-level parking versus single-level parking.
- Consider distributing parking across the 13-acre site of the Alum Rock Station and 28th Street.
- Consider a public/private joint venture development with the Five Wounds Village to incorporate shared parking for the Phase II Project and the Village.
- Discuss the underground tunnel at the Alum Rock Station and whether it entails tunneling under U.S. 101 and Julian Street.
- Consider traversing U.S. 101 north of the Julian Street/U.S. 101 interchange instead of tunneling under U.S. 101.
- Discuss whether the Project will impact the Western Pacific Train Trestle crossing Silver Creek.
- Consider locating the station under 28th Street instead of at the current proposed location.
- Consider expanding bridge width of rail crossing at U.S. 101 to allow for double tracking and for pedestrian and bicycle utilization.
- Describe development and value capture opportunities related to using the rail bridge route versus the tunnel option at U.S. 101.

- Consider expanding the parking structure to handle traffic and prevent parking overflow onto adjacent neighborhoods.
- Consider 28th Street Station built with direct U.S. 101 access off the existing southbound frontage road.
- Discuss the interface of the proposed parking structure with the proposed station.
- Discuss what VTA will do to enhance the development of this site during and after underground construction is complete.
- Consider providing parking with good access from the U.S. 101/McKee Road and U.S. 101/Alum Rock Avenue interchanges.
- Discuss pedestrian access to the Alum Rock Station, especially from across U.S. 101 on Julian Street/McKee Road and Santa Clara Street/Alum Rock Avenue.
- Consider use of the VTA-owned parcels in the vicinity of the Alum Rock Station for a maintenance and storage facility.
- Consider the addition of other transit services, such as a bus rapid transit stop, to the Alum Rock Station to allow for connections to BART.

Downtown San Jose Station

- Consider adding exits to First and Third Streets for the West Option.
- Consider providing station entrances on Santa Clara Street for both Downtown San Jose Station Options.
- Consider providing access to City Hall from the Downtown San Jose Station East Option.
- Consider an extended, non-cut-and-cover station for the downtown to include entrances at both the city hall/university area and the convention center/entertainment district.
- Discuss the depth of the existing timber pile foundations supporting the Coyote Creek Bridge under Santa Clara Street near 19th Street.

Diridon Station

- Discuss traffic, parking, and potential loss of business to SAP Center during construction and operations.
- Discuss if any streets off The Alameda will be impacted by train operations when trains leave the Diridon Station to Stockton Avenue.
- Consider building an underground transit plaza and passageway from the existing passageway at the Caltrain Diridon Station to the future BART Diridon Station.
- Consider parking structures at Diridon Station.
- Consider coordinating parking areas for high-speed rail and Caltrain in an integrated structure.
- Consider providing more than two entry/exit points at the station due to future development south of the proposed station.

- Consider providing platforms at the Diridon Station that are compatible with Caltrain and highspeed rail.
- Do not provide parking at Diridon Station.

Santa Clara Station

- Consider not providing parking structure at the Santa Clara Station.
- Preference for the East Parking Option located on Coleman Avenue at the Santa Clara Station.
- Consider a crossing under the Caltrain tracks to provide pedestrian access from Santa Clara University to the Santa Clara Station.
- Discuss the need for Santa Clara Station.
- Station entry/exit points are lacking on the east and west sides.
- Discuss how the Santa Clara Station will affect the old train station.

Parking, Pedestrian, and Bicycles Facilities

- Consider potential for any of the proposed parking structures to be built underground instead of using valuable developable land aboveground.
- Request for parking structures to be situated so that the frontages of the parking structures facing city streets can still be utilized for retail, office, or residential uses.
- Request for the abandoned railroad bridge over U.S. 101, north of Five Wounds Village, to be used for pedestrian and bicycle use.
- Request for the Project to include strong bike and pedestrian infrastructure in the immediate vicinity of each proposed station.
- Request for the Project to integrate design suitable for seniors and people with disabilities at each proposed station.
- Request for the Project to include on-site bike lockers and expanded bike lanes along cycling arteries leading to the proposed stations.
- Request to include bike facilities in the underground stations so bicyclists do not have to carry their bikes over stairs.
- Request that parking structures be built in such a way that additional parking floor can be easily added in the future without having to rebuild or reinforce the original structure.
- Consider the requirements for the size of the portal escalators, stairways and elevators, and supportive infrastructure such as the width of sidewalks, lighting, and accessible routes.

Construction Activities

- Discuss when initial construction will begin.
- Discuss which areas will require digging underground, when construction will begin in those areas, how much earth or material will be moved, where it will go, and if there will be any testing on the materials to see whether it is hazardous.

- Discuss impacts from road closures due to construction activities.
- Discuss construction impacts on The Anne Darling School, Five Wounds Church, and Cristo Rey San José Jesuit High School.
- Consider the possibility of not using cut-and-cover for the development of the underground stations.
- Discuss the truck haul routes to be used during Project construction.
- Describe measures to reduce construction impacts on businesses impacted by construction activities.
- Discuss the conceptual construction management plan along the route including proposed truck routes, staging areas, and worker parking.
- Consider mining downtown stations to reduce construction impacts.

Operation and Maintenance

- Discuss the operational activities and train movements that could be expected from the scale of facility proposed for the Newhall Yard.
- Consider constructing a maintenance and storage facility for implementation of the Phase II Project.
- Consider impacts on BART's core system.
- Consider a common ticketing system that is compatible with all other transit systems serving the Project area.
- Discuss operational impacts on The Anne Darling School, Five Wounds Church, and Cristo Rey San José Jesuit High School.
- Consider maintaining service levels on other transportation modes when Phase II Project is operational, focusing on areas where ridership is the highest, including low-income communities.

4.2 Environmental Analysis

Air Quality and Greenhouse Gases Emissions

- Discuss impacts on air quality and greenhouse gas emissions in the Bay Area and on sensitive receptors in the vicinity of the Phase II Project.
- Discuss expected sea rise and storm surges impacts of the future due to climate change.
- Describe opportunities for reduction of vehicle miles traveled and greenhouse gas emissions from the Project.
- Discuss how much dust would be generated from Project construction and how will it be mitigated.
- Describe dust impacts on adjacent residential uses.

Biological Resources

- Discuss impact on Silver Creek and on wildlife that uses this waterway as a feeding and resting place, especially during migratory seasons.
- Discuss loss of trees due to project construction, specifically along Stockton Avenue.

Community Services and Facilities

Discuss impacts on Theodore Lenzen Park.

Cultural Resources

- Consider ways to preserve and maintain historic trestle railroad bridge over Silver Creek.
- Analyze potential impacts on historically significant structures along the route, particularly the Five Wounds Church and historic buildings along Santa Clara Street in downtown San José.
- Discuss impacts on the historic character of the Western Dental Building because this structure is a candidate city landmark and a contributing structure to the Downtown San Jose Commercial District, which is a historic district listed on the National Register of Historic Places.

Energy

 Update discussion about potential peak power distribution reliability problems in the San Jose area.

Geology, Soils, and Seismicity

• Discuss impact from liquefaction and earth settlement.

Hazards and Hazardous Materials

Discuss impacts from buried hazardous materials given the previous uses of the proposed sites.

Land Use

- Disclose eminent domain or condemnation issues involved with the Phase II Project.
- Discuss potential for disruptions and displacement of residents and businesses along the Phase II Project alignment.
- Consider current and future housing and commercial costs along the Phase II Project alignment and include in displacement analysis for residents and businesses.
- Analyze Phase II Project consistency and potential conflicts with relevant land use plans and policies.

Noise and Vibration

Discuss noise and vibration impacts related to the tunnel exit approaching the Santa Clara
 Station given all the new and proposed housing in that area.

- Discuss operational noise and vibration impacts on established communities along the Phase II Project alignment.
- Discuss impact of vibration and noise on nearby schools and Five Wounds Church.
- Discuss cumulative noise impacts on neighborhoods adjacent to Diridon Station considering existing Caltrain operation noise.
- Disclose the maximum and average noise levels from project construction and whether there will there be noise barriers.

Socioeconomics

- Discuss how the Alum Rock Station will impact low-income residents in the vicinity of the station location, and how negative impacts will be mitigated.
- Discuss how many jobs will be accessible to low-income residents in the Alum Rock area as a result of the Project.
- Discuss economic and socio-economic impacts of cut-and-cover Downtown San Jose Station under East Santa Clara Street.
- Discuss environmental justice implications on low-income and minority communities as a result
 of the redirecting of funds from local bus services and other transit services to the Phase II
 Project.
- Consider impacts due to gentrification.
- Assess impacts on the local community if the Alum Rock Station is not built.

Security and System Safety

• Discuss if there will be added security at the proposed stations and if patrolling at these new stations will be assigned to BART police or the local police department in those areas.

Transportation

- Consider commitment of a "fair share contribution" toward the improvement of the affected roadways.
- Use the City of San Jose's Transportation Level of Service Policy for determining thresholds of significance when evaluating vehicular traffic impacts of the Project.
- Provide bicycle- and pedestrian-friendly facilities and connections.
- Discuss temporary construction impacts on traffic, circulation, and parking.
- Discuss traffic impact of the opening of the Berryessa BART Station prior to the building of the Mabury Road interchange at U.S. 101.
- Discuss traffic impacts on: U.S. 101/McKee Road interchange, McKee Road between U.S. 101 and Interstate 680 (I-680), North King Road/Silver Creek intersection, Berryessa Road between BART station and I-680.
- Discuss changes to roadway vehicle capacity resulting from the Project.

- Discuss impact on bus service and light rail service in the vicinity of the Downtown San Jose Station during construction and operations.
- Discuss how the Phase II Project will affect bus service levels in Santa Clara County.
- Consider traffic impact on the existing and planned regional pedestrian trail network.
- Evaluate impacts on the state highway system.
- Provide an updated traffic forecast for the environmental document, including park-and-ride and kiss-and-ride trips by station for all proposed new BART stations.
- Discuss pedestrian safety at crosswalks that will be impacted by the Project.
- Discuss traffic and parking operational impacts on SAP Center under cumulative conditions, peak hours, and during Project construction and operation.

Utilities

- Discuss management of utilities, particularly those that need to be relocated as part of the tunnel, station construction, and other supportive infrastructure.
- Discuss anticipated service disruptions, estimated duration, and potential impact on the surrounding areas and any mitigation strategies.

Water Resources, Water Quality, and Floodplains

- Update discussion on impacts to flooding based on the Federal Emergency Management Agency's current flood insurance rate maps.
- Discuss impacts on water table from tunneling under the Guadalupe River and Los Gatos Creek.

Cumulative Impacts

- Evaluate the Phase II Project's permanent and temporary impacts on existing Caltrain infrastructure, service, and active Caltrain projects.
- Evaluate the Downtown Extension to Transbay as part of cumulative impacts.
- Evaluate the U.S. 101 Express Lanes project as part of cumulative impacts.

4.3 Project Alternatives

- Consider a connection to the Mineta San Jose Airport.
- Consider a bridge alignment over U.S. 101 to save money.
- Consider devoting the railroad bridge over U.S. 101 to pedestrian and bicycle use.
- Eliminate extension to Santa Clara beyond the Diridon Station.
- Consider the extension to Santa Clara beyond the Diridon Station as a separate and later phase.
- Consider additional station locations: Fountain Alley Station, Mineta San Jose International Airport (SJIA) Station, San Jose State University Station

- Study an alternative based on the BayRail Alliance's Caltrain Metro East alignment proposal, either with a BART spur or standard gauge (LRT or Caltrain/High Speed Rail) connecting San Jose Diridon, San Jose Mineta, North 1st Street, and Milpitas.
- Study an alternative of the BayRail Alliance's Caltrain Metro East alignment proposal with a station (alternative to Diridon) located adjacent to State Route 87.
- Study alternative tunnel opening locations as the trains leave downtown San Jose toward Santa Clara and approach the Newhall Yard, specifically a tunnel located south and east of I-880.
- Study an alternative with light rail on Santa Clara Street/Alum Rock Avenue with a spur to Berryessa BART Station.
- Study an alternative with dedicated bus ramps from U.S. 101 and Santa Clara Street along the rail right-of-way to Berryessa BART Station to provide enhanced bus rapid transit service.
- Study alternative locations for train storage, maintenance activities, and train reversal if the Santa Clara extension is not built in this phase.
- Study alternative locations for stations that do not duplicate existing Caltrain service.
- Consider continuing alignment to City College, Valley Medical Center, Valley Fair, and Santana Row beyond the Diridon Station.
- Consider using the Great Mall rail yard as maintenance facility.
- Consider a link to Avaya Stadium.
- Consider using alternative technology.
- Consider extending the alignment along El Camino Real to Palo Alto.
- Consider upgrading existing BART facilities in Hayward to handle the Project's train storage requirements instead of using the Newhall Yard.
- Consider using diesel multiple units for the segment from Diridon Station to Santa Clara Station.
- Consider the option of elevating BART through San Jose rather than tunneling.
- Consider additional station in Santa Clara along San Carlos Street and Stevens Creek near Valley Fair and Santana Row.
- Consider the most direct line between Great Mall and Downtown San Jose Station with an intermediate station placed about half way.

4.4 Coordination with Agencies and Public Outreach

Coordination with Other Agencies

- Identify BART and Santa Clara Valley Water District (SCVWD) in the SEIS/SEIR3 and consult with them as responsible agencies under CEQA.
- Request for VTA to collaborate closely with BART and share information early in the environmental review process.

- Construction of Phase II Project railroad tracks should comply with the California Public Utilities Commission's regulations.
- Obtain SCVWD permit pursuant to SCVWD's Water Resources Protection Ordinance for crossings of SCVWD facilities.
- Obtain necessary land rights for crossings of SCVWD property.
- Obtain an encroachment permit from Caltrans for work or traffic control that encroaches onto the state right-of-way.

Public Information/Involvement

- Request to post information on the Project website regarding Project design features, community meetings, and funding information.
- The scoping period was restrictive and should have been a 45-day, not 30-day, period.
- Consider establishing a Downtown working group to address the planning and design details for Downtown San Jose and Diridon Stations.

4.5 Funding/Costs

- Discuss the cost of the Phase II Project.
- Discuss the likelihood of receiving funding for the Project.

Reviewing Agencies and Organizations

Santa Clara Valley Transportation Authority Environmental Programs and Resources Management 3331 North 1st Street, Building B-2 San Jose, CA 95134

SUBJECT: Notice of Preparation of a 3rd Draft Supplemental Environmental Impact Report for VTA's BART Silicon Valley – Phase II Extension Project

The Santa Clara Valley Transportation Authority (VTA), as the lead agency, will prepare a 3rd Supplemental Environmental Impact Report (SEIR) for the project identified below. We need to know the views of your agency regarding the scope and content of the environmental information that is germane to your agency's statutory responsibilities in connection with the proposed project. The 3rd SEIR will supplement the Final EIR, the 1st Final SEIR, and the 2nd Final SEIR which were certified by the VTA Board of Directors on December 9, 2004; June 7, 2007; and March 3, 2011, respectively. Your agency will need to use the Final EIR, 1st Final SEIR, and 3rd SEIR prepared by our agency when considering your permit or other approvals for the project.

The project description, location, overview, and potential environmental effects are contained in the attached materials. A copy of the initial study \square is \square is not attached.

Because of time limits mandated by state law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Please send your response to <u>Thomas W. Fitzwater</u> at the address shown above. Please provide the name of a contact person in your agency.

Project Title: VTA's BART Silicon Valley – Phase II Extension Project

Project Applicant, if any: Santa Clara Valley Transportation Authority

Project Description: See attachment

Date: 1/30/2015 Signature:

Name: Thomas W. Fitzwater

Title: Manager, Environmental Programs and Resources Management

Telephone: (408) 321-5705

Reference: California Code of Regulations, Title 14, (State CEQA Guidelines) Sections 15082(a), 15103, 15375.

NOTICE OF PREPARATION

ATTACHMENT

3rd Supplemental Environmental Impact Report for VTA's BART Silicon Valley – Phase II Extension Project

Lead Agency: Santa Clara Valley Transportation Authority

Project Description and Location

VTA's Bay Area Rapid Transit (BART) Silicon Valley – Phase II Extension Project (Phase II Project) would be constructed in Santa Clara County. The 6-mile-long Phase II Project would begin at the terminus of the BART Silicon Valley – Phase I Berryessa Extension Project (Phase I Project) (currently under construction and scheduled to be operational in late 2017) south of Mabury Road in the City of San Jose. The Phase II Project would be at grade where it connects to the Phase I Project and then descend into approximately 5-mile-long subway tunnels that continue through downtown San Jose and terminate at grade in the City of Santa Clara near the Santa Clara Caltrain Station (see Figure 1). Four stations are proposed, three in San Jose, the Alum Rock, Downtown San Jose, and Diridon Stations, and one in Santa Clara, the Santa Clara Station. Parking structures are proposed at the Alum Rock and Santa Clara Stations; "kiss-and-ride" (passenger drop-off) facilities are proposed at Alum Rock, Diridon, and Santa Clara Stations. The station facilities would include electrical and ventilation systems as well as communication equipment. A maintenance yard is proposed near the Santa Clara Station.

Several project changes have occurred since the 1st SEIR was approved in 2007. In the 2007 1st SEIR, the project was a 16-mile-long extension of the BART system from the Warm Springs Station in the City of Fremont to Santa Clara and was called the Silicon Valley Rapid Transit Corridor Project (SVRTC Project). The 16-mile-long SVRTC Project is now called the BART Silicon Valley Program. In 2010, VTA decided to construct the BART Silicon Valley Program in phases. The 2nd SEIR, approved in 2011, addressed design changes applicable to the Phase I Project only. The Phase I Project consists of the first 10 miles of the BART Silicon Valley Program and is currently under construction and scheduled to open in late 2017. The Phase I Project begins at the future BART Warm Springs Station in the City of Fremont, continues through the Cities of Milpitas and San Jose, and terminates just north of U.S. 101 in San Jose. The Phase I Project followed the former Union Pacific Railroad (UPRR) right-of-way (ROW) owned by VTA.

The Phase II Project, the remaining 6 miles of the BART Silicon Valley Program from the terminus of the Phase I Project to Santa Clara, is now being considered for clearance.

3rd SEIR and Supplemental Environmental Impact Statement

In accordance with the California Environmental Quality Act (CEQA), VTA intends to prepare a 3rd SEIR for the BART Silicon Valley – Phase II Extension Project. The 3rd SEIR will be prepared as a joint document with a Supplemental Environmental Impact Statement (SEIS) that will be prepared in accordance with the National Environmental Policy Act (NEPA). The Federal Transit Administration (FTA) will serve as the federal lead agency.

The 3rd SEIR will evaluate the impacts of the proposed Project in light of design changes as well as changes to the regulatory and environmental settings that have occurred since certification of the 1st Final SEIR on June 7, 2007. Generally, the changes include (1) vertical and horizontal alignment changes, (2) revised station designs and configurations, (3) refinements to the design and location of system facilities, (4) changes in the existing conditions and regulatory setting, and (5) project schedule changes.

Environmental Process Background

In February 2002, VTA initiated the environmental process by conducting scoping meetings for the Silicon Valley Rapid Transit Corridor (SVRTC) Project. In March 2004, the Draft Environmental Impact Statement/Draft Environmental Impact Report (EIS/EIR) was released for public review, in accordance with state and federal law. Following circulation of the Draft EIS/EIR in April 2004, it was determined that the opportunity for securing federal funds at that time was limited. The Final EIR was certified by the VTA Board of Directors on December 9, 2004. Following certification of the Final EIR, design continued. A Draft SEIR was released for public review in January 2007. The Final SEIR was certified by the VTA Board of Directors on June 7, 2007. The federal environmental document, the Environmental Impact Statement, was processed separately. The Draft EIS was released on March 13, 2009. FTA signed the Record of Decision for the Phase I Project on June 24, 2010. In 2011, a 2nd Supplemental FEIR was certified by the VTA Board of Directors to address design changes applicable to the Phase I Project. The Phase I Project is under construction, and revenue service is forecast for late 2017. The remaining phase of the BART Silicon Valley Program from the Berryessa area in San Jose to Santa Clara is now being considered for clearance under a combined CEQA/NEPA document.

Probable Effects

The purpose of the 3rd SEIR is to disclose the environmental consequences of the proposed Phase II Project. The 3rd SEIR will determine the extent to which the Phase II Project, as defined, would result in environmental impacts and discuss actions to reduce or eliminate such impacts. Probable effects to be examined in the 3rd SEIR are related to air quality; biological resources and wetlands; community services and facilities; cultural resources; electromagnetic fields; energy; geology, soils, and seismicity; greenhouse gas emissions; hazards/hazardous materials; land use; noise and vibration; safety and security; transportation, including transit, parking, pedestrians, bicycles, and traffic; utilities; visual quality and aesthetics; and water resources, water quality, and floodplains. Impacts resulting from project and setting changes will be identified for both long-term operation of the project and the construction period. To ensure that the full range of issues is addressed and all significant impacts are identified, comments and suggestions are invited from all interested parties.

Comment Due Date

Written scoping comments must be received no later than 30 days after receipt of this notice and sent to:

Thomas W. Fitzwater, Manager, Environmental Programs and Resources Management Santa Clara Valley Transportation Authority

3331 North First Street

San Jose, CA 95134-1927

They can also be sent via email to BARTphase2EIS-EIR@vta.org.

Scoping Meetings

Scoping will continue through correspondence and discussions with interested persons; organizations; and federal, state, and local agencies. In addition, public scoping meetings will be held on:

• Thursday, February 12, 2015; 5:30 p.m. to 7:30 p.m. at Santa Clara City Council Chambers, 1500 Warburton Avenue, Santa Clara, CA 95050.

(This location is served by VTA Bus, 22, 32, 60, and 522)

• Tuesday, February 17, 2015; 5:30 p.m. to 7:30 p.m. at VTA Customer Service Center, 55 West Santa Clara Street, San Jose, CA 95113

(This location is served by VTA Bus, 22, 63, 66, 68, 72, 73, 81, 82, 522 and Light Rail)

• Thursday, February 19, 2015; 5:30 p.m. to 7:30 p.m. at School of Arts and Culture at Mexican Heritage Plaza, 1700 Alum Rock Ave, San Jose, CA 95116

(This location is served by VTA Bus, 22, 23, 77, and 522)

Project information will be presented at the meetings. Scoping material will be available as well. Persons with disabilities will be able to access the buildings used for the scoping meetings. Individuals who require language translation, American Sign Language, or other assistance are requested to contact VTA Community Outreach at (408) 321-7575, TTY (408) 321-2330, at least five (5) business days before the public information meeting. All meeting facilities are accessible to persons with disabilities.

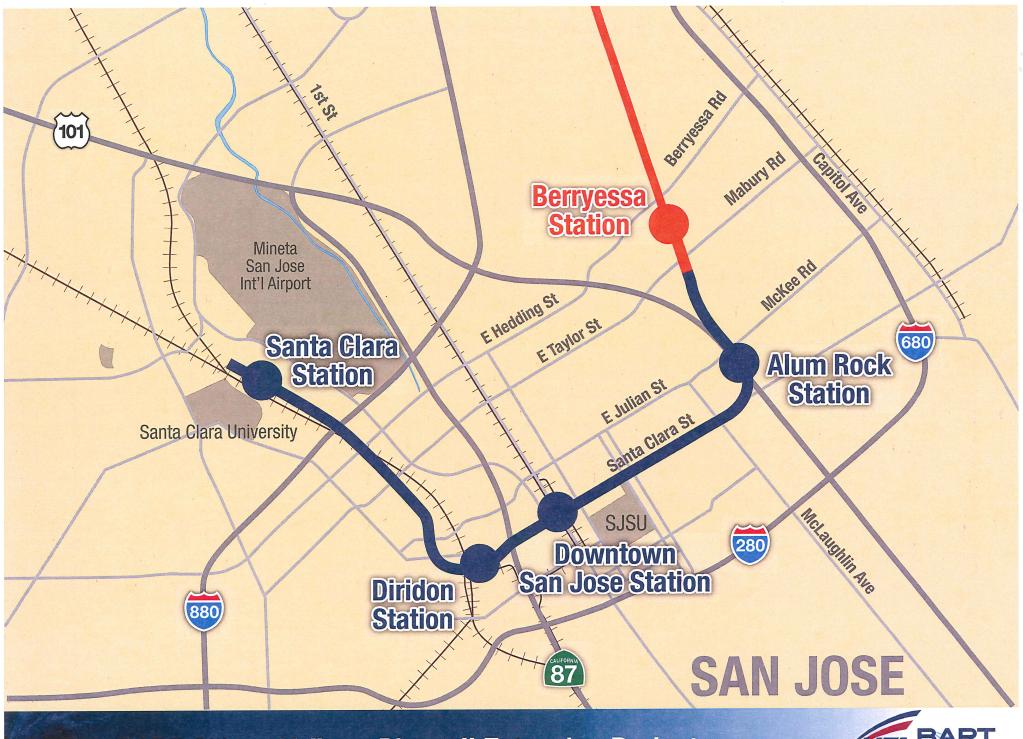

For Further Information

Contact Mr. Thomas W. Fitzwater at the address above, at (408) 321-5705, or at BARTphase2EIS-EIR@vta.org to be included on the Project mailing list and receive additional information about the Project.

Issued on: 30, 2015.

Thomas W. Fitzwater

Manager, Environmental Programs and Resources Management

PUBLIC MEETINGS

VTA's BART Silicon Valley Phase II Extension

Project Overview

Federal Transit Administration (FTA) and the Santa Clara Valley Transportation Authority (VTA) are initiating an environmental study for the proposed construction of an approximately 6-mile extension of the Bay Area Rapid Transit (BART) system from the Berryessa BART Station (under construction) in San Jose to the City of Santa Clara. The Project plans to include four stations: the Alum Rock, Downtown San Jose, Diridon, and Santa Clara Stations. The environmental study will be in compliance with the federal National Environmental Policy Act (NEPA) and state California Environmental Quality Act (CEQA) environmental process by preparing a combined Supplemental Draft Environmental Impact Statement (SEIS) and 3rd Supplemental Draft Environmental Impact Report (SEIR3). The study will include an analysis of the following two alternatives: 1) the Future No-Build and 2) VTA's BART Silicon Valley Phase II Extension Project. The Draft SEIS/SEIR3 will address short- and long-term environmental impacts of both project alternatives.

VTA will be holding three scoping meetings to listen to comments about the project. Scoping is the first step in the environmental process. The purpose of scoping is to narrow the focus of the study (Draft SEIS/SEIR3) to significant environmental issues, eliminate insignificant impacts from detailed study, and identify alternatives to be analyzed. To learn more or offer comments, please attend one of the public meetings. All the meetings will provide the same information.

PUBLIC MEETINGS

Meeting 1 - February 12, 2015 Open House 5:30-6:30 p.m. Formal Presentation & Comments 6:30-7:30 p.m. Santa Clara City Council Chambers 1500 Warburton Avenue, Santa Clara, CA 95050 This location is served by VTA Bus 22, 32, 60, and 522.

Meeting 2 - February 17 Open House 5:30-6:30 p.m. Formal Presentation & Comments 6:30-7:30 p.m. VTA Customer Service Center 55-A West Santa Clara Street, San Jose, CA 95113 This location is served by VTA Bus 22, 63, 66, 68, 72, 73, 81,

82, 522 and Light Rail. Meeting 3 - February 19 Open House 5:30-6:30 p.m.

Formal Presentation & Comments 6:30-7:30 p.m. School of Arts and Culture at Mexican Heritage Plaza 1700 Alum Rock Avenue, San Jose, CA 95116 This location is served by VTA Bus 22, 23, 77, and 522.

Reuniones de la Comunidad

Fase II de la Extensión de BART en Silicon Valley de VTA

Panorama General del Proyecto:

La Administración Federal de Transporte (FTA) y Santa Clara Valley Transportation Authority (VTA) están iniciando un estudio ambiental para la propuesta construcción de una extensión de aproximadamente 6 millas del sistema Bay Area Rapid Transit (BART) desde Berryessa BART Station (la cual está bajo construcción) en San José a la Ciudad de Santa Clara. El Proyecto incluiría cuatro estaciones: las estaciones Alum Rock, Downtown San Jose, Diridon, y Santa Clara. El estudio ambiental estará en conformidad con el proceso ambiental de la Ley Nacional sobre Política Ambiental (NEPA, por sus siglas en inglés) y de la Ley de Calidad Ambiental del Estado de California (CEQA, por sus siglas en inglés) mediante la redacción de una Declaración Preliminar Suplemental del Impacto Ambiental (SEIS, por sus siglas en inglés) y un 3er Informe Preliminar Suplemental del Impacto Ambiental (SEIR3, por sus siglas en inglés). Las redacciones preliminares de SEIS/SEIR3 incluirán un análisis de las dos alternativas siguientes: 1) La futura no-construcción y 2) La Fase II del Proyecto de Extensión de BART en Silicon Valley de VTA. Las redacciones preliminares de SEIS/SEIR3 tratarán sobre los impactos ambientales a corto y largo plazo de ambos proyectos alternos.

VTA celebrará tres reuniones de estudio preliminar para escuchar los comentarios sobre el proyecto. La reunión del estudio preliminar es el primer paso en el proceso ambiental. El propósito de la reunión del estudio preliminar es de limitar el enfoque de la redacción Preliminar de SEIS/SEIR3 a los problemas ambientales importantes, eliminar del estudio detallado los impactos insignificantes e identificar las alternativas que serán analizadas. La reunión del estudio preliminar también sirve para dar aviso al público y a otras agencias de que la redacción Preliminar de SEIS/SEIR3 está siendo preparada y con ello inicia su participación en el proceso. Para informarse más o para ofrecer sus comentarios, le invitamos a acudir a una de las reuniones públicas. Se proporcionará la misma información en todas las reuniones.

Reuniones Públicas

1a Reunión - 12 de febrero de 2015 (de 5:30 p.m. a 7:30 p.m.)
Reunión de puerta abierta, de 5:30 p.m. a 6:30 p.m.
Presentación formal, de 6:30 p.m. a 7:30 p.m.

Salones del Concejo (Council Chambers) de la Ciudad de Santa Clara 1500 Warburton Avenue, Santa Clara, CA 95050 A este lugar se puede llegar utilizando las Líneas de Autobuses 22, 32, 60 y 522 de VTA.

2a Reunión - 17 de febrero de 2015 (de 5:30 p.m. a 7:30 p.m.)
Reunión de puerta abierta, de 5:30 p.m. a 6:30 p.m.
Presentación formal, de 6:30 p.m. a 7:30 p.m.

Centro de Servicio al Pasajero de VTA 55 West Santa Clara Street, San Jose, CA 95113

A este lugar se puede llegar utilizando el tranvía y las Líneas de Autobuses 22, 63, 66, 68, 72, 73, 81, 82 y 522 de VTA.

3a Reunión - 19 de febrero de 2015 (de 5:30 p.m. a 7:30 p.m.) Reunión de puerta abierta, de 5:30 p.m. a 6:30 p.m. Presentación formal, de 6:30 p.m. a 7:30 p.m.

School of Arts and Culture en Mexican Heritage Plaza 1700 Alum Rock Avenue, San José, CA 95116

A este lugar se puede llegar utilizando las Líneas de Autobuses 22, 23, 77 y 522 de VTA.

Các Buổi Họp Cộng Đồng: Dự Án Nối Dài BART Silicon Valley Giai Đoạn II của VTA

Tổng Quan Dư Án:

Cơ Quan Quản Lý Vân Chuyển Liên Bang (FTA) và Cơ Quan Vân Chuyển Thung Lũng Santa Clara (VTA) đang bắt đầu một nghiên cứu môi trường cho dư án nối dài khoảng 6 dặm hệ thống Vân Chuyển Tốc Hành Vùng Vinh (BART) từ Tram Berryessa BART (đang xây cất) tai San Jose tới Thành Phố Santa Clara. Dư Án này sẽ bao gồm bốn tram: Alum Rock, Trung Tâm San Jose, Diridon, và Santa Clara. Nghiên cứu môi trường này sẽ tuân thủ Đao Luât Liên Bang Chính Sách Môi Trường Quốc Gia (NEPA) và quy trình môi trường của Đao Luât Chất Lương Môi Trường tiểu bang California, qua việc chuẩn bị Dư Thảo Bổ Sung Tuyên Bố Tác Đông Môi Trường (SEIS) và Dư Thảo Bổ Sung Báo Cáo Tác Đông Môi Trường Lần 3 (SEIR3). Dư Thảo SEIS/SEIR3 sẽ phân tích hai lưa chon thay thế sau đây: 1) Không Xây Cất Trong Tương Tai (Future No-Build) và 2) Dư Án Nối Dài BART Silicon Valley Giai Đoan II của VTA. Dư Thảo SEIS/SEIR3 sẽ đề cập tới các tác động về môi trường ngắn hạn và dài han của cả hai lưa chọn thay thế.

VTA sẽ tổ chức ba buổi họp trong tâm để lắng nghe các ý kiến nhất xét về dư án này. Buổi họp trong tâm là bước đầu tiên trong quy trình về môi trường. Mục đích của buổi họp trong tâm là tóm tắt lai trong tâm của Dư Thảo SEIS/SEIR3, tập trung vào các vấn đề môi trường đáng kể, loại bỏ các tác động không đáng kể từ nghiên cứu chi tiết, và xác định các lựa chọn thay thế cần phân tích. Buổi họp trong tâm cũng thông báo cho công đồng và các cơ quan khác rằng Dư Thảo SEIS/SEIR3 đang được chuẩn bị và bắt đầu tham gia vào quy trình. Để tìm hiểu thêm hoặc đóng góp ý kiến nhân xét, xin quý vi vui lòng tham dư một trong các buổi họp công đồng. Tất cả các buổi họp đều cung cấp thông tin giống nhau.

Các Buổi Hop Công Đồng

Buổi Hop 1 - ngày 12 tháng Hai, 2015 (5:30 chiều - 7:30 tối) Giới Thiêu Thông Tin 5:30 chiều - 6:30 tối Trình Bày Chính Thức 6:30 tối - 7:30 tối

Phòng Hôi Đồng Thành Phố Santa Clara (Santa Clara City Council Chambers) 1500 Warburton Avenue, Santa Clara, CA 95050 Các Tuyến Xe Buýt VTA 22, 32, 60 và 522 phục vụ địa điểm này.

Buổi Họp 2 - ngày 17 tháng Hai, 2015 (5:30 chiều - 7:30 tối) Giới Thiêu Thông Tin 5:30 chiều - 6:30 tối Trình Bày Chính Thức 6:30 tối - 7:30 tối

Trung Tâm Dich Vu Khách Hàng của VTA (VTA Customer Service) 55 West Santa Clara Street, San Jose, CA 95113 Các Tuyến Xe Buýt VTA 22, 63, 66, 68, 72, 73, 81, 82, 522 và Xe Điên VTA phục vụ địa điểm này.

Buổi Hop 3 - ngày 19 tháng Hai, 2015 (5:30 chiều - 7:30 tối) Giới Thiêu Thông Tin 5:30 chiều - 6:30 tối Trình Bày Chính Thức 6:30 tối - 7:30 tối

Trường School of Arts and Culture tại Mexican Heritage Plaza 1700 Alum Rock Ave, San Jose, CA 95116 Các Tuyến Xe Buýt VTA 22, 23, 77 và 522 phục vụ địa điểm này.

공청회: VTA의 BART 실리콘밸리2단계 연장사업

사업 개요:

미국연방교통국(FTA, Federal Transit Administration)과 산타클라라 밸리 교통국(VTA)은 산호세 Berrvessa BART 역(건설 중)에서부터 산타클라라 시까지 BART를 약 6마일 연장하는 사업인과 관련하여 환경영향평가를 위한 연구를 시작할 예정입니다. 이번 사업에는 Alum Rock, Downtown San Jose, Diridon, Santa Clara의 네 개 역이 포함될 것입니다. 환경영향평가를 위한 연구는 추가환경영향평가서 초안(SEIS, Supplemental Draft Environmental Impact Statement) 및 제3차 추가환경영향평가보고서 초안(SEIR3, Supplemental Draft Environmental Impact Report)을 함께 작성하여 연방 국가환경정책법(NEPA, National Environmental Policy Act)과 캘리포니아환경품질법(CEQA, California Environmental Quality Act)에 따른 환경보호 절차를 준수하게 됩니다. SEIS/SEIR3 초안에는 다음의 두 가지 대안을 분석한 내용이 포함됩니다. 1) 향후 미 건설, 2) VTA의 BART 실리콘밸리 2단계 연장사업. SEIS/SEIR3 초안에서는 두 가지 대안이 장단기적으로 환경에 미치는 영향에 대해 다루게 됩니다.

VTA는 본 사업에 대한 의견을 수렴하기 위한 설계회의를 세 차례에 걸쳐 개최할 예정입니다. 설계회의는 환경영향평가를 위한 첫 번째 절차입니다. 설계회의의 목적은 SEIS/SEIR3 초안의 초점을 중대한 환경 사안으로 좁히고. 미미한 영향에 관한 부분은 세부 연구에서 제외하는 동시에 분석할 대안을 파악하는 것입니다. 또한 설계회의를 통해 시민들과 기타 기관에 SEIS/SEIR3 초안을 준비하고 있다는 점을 알리고 전 과정에 이들의 참여를 이끌어 냅니다. 보다 자세한 정보를 듣고 의견을 제시하려면 공청회에 참석해 주시기 바랍니다. 세 차례에 걸친 모든 공청회에서는 동일한 정보가 제공됩니다.

공청회

1차 공청회 - 2015년 2월 12일 (오후 5:30 ~ 오후 7:30) 식전 프로그램 오후 5:30 ~ 오후 6:30 공식 발표 오후 6:30 ~ 오후 7:30 산타클라라 시의회(Santa Clara City Council Chambers) 1500 Warburton Avenue, Santa Clara, CA 95050 VTA 버스 22, 32, 60, 522번이 운행됩니다.

2차 공청회 - 2015년 2월 17일 (오후 5:30 ~ 오후 7:30) 식전 프로그램 오후 5:30 ~ 오후 6:30 공식 발표 오후 6:30 ~ 오후 7:30 VTA 고객서비스센터(VTA Customer Service Center)

55 West Santa Clara Street, San Jose, CA 95113 VTA 버스 22, 63, 66, 68, 72, 73, 81, 82, 522번과 VTA 경전철이 운행됩니다

3차 공청회 - 2015년 2월 19일 (오후 5:30 ~ 오후 7:30) 식전 프로그램 오후 5:30 ~ 오후 6:30 공식 발표 오후 6:30 ~ 오후 7:30 Mexican Heritage Plaza, School of Arts and Culture 1700 Alum Rock Ave. San Jose, CA 95116 VTA 버스 22, 23, 77, 522번이 운행됩니다.

PUBLIC MEETINGS

VTA's BART Silicon Valley Phase II Extension

Project Overview

The Federal Transit Administration (FTA) and the Santa Clara Valley Transportation Authority (VTA) are initiating an environmental study for the proposed construction of an approximately 6-mile extension of the Bay Area Rapid Transit (BART) system from the Berryessa BART Station (under construction) in San Jose to the City of Santa Clara. The Project plans to include four stations: the Alum Rock, Downtown San Jose, Diridon, and Santa Clara Stations. The environmental study will be in compliance with the federal National Environmental Policy Act (NEPA) and state California Environmental Quality Act (CEQA) environmental process by preparing a combined Supplemental Draft Environmental Impact Statement (SEIS) and 3rd Supplemental Draft Environmental Impact Report (SEIR3). The study will include an analysis of the following two alternatives: 1) the Future No-Build and 2) VTA's BART Silicon Valley Phase II Extension Project. The Draft SEIS/SEIR3 will address shortand long-term environmental impacts of both project alternatives.

VTA will be holding three scoping meetings to listen to comments about the project. Scoping is the first step in the environmental process. The purpose of scoping is to narrow the focus of the study (Draft SEIS/SEIR3) to significant environmental issues, eliminate insignificant impacts from detailed study, and identify alternatives to be analyzed. To learn more or offer comments, please attend one of the public meetings. All the meetings will provide the same information.

PUBLIC MEETINGS

Meeting 1 - February 12, 2015 Open House 5:30-6:30 p.m.

Formal Presentation & Comments 6:30-7:30 p.m.

Santa Clara City Council Chambers, 1500 Warburton Avenue, Santa Clara, CA 95050 This location is served by VTA Bus 22, 32, 60, and 522.

> Meeting 2 - February 17 Open House 5:30-6:30 p.m. Formal Presentation & Comments 6:30-7:30 p.m.

VTA Customer Service Center, 55 West Santa Clara Street, San Jose, CA 95113 This location is served by VTA Bus 22, 63, 66, 68, 72, 73, 81, 82, 522 and Light Rail.

Meeting 3 - February 19
Open House 5:30-6:30 p.m.
Formal Presentation & Comments 6:30-7:30 p.m.
School of Arts and Culture at Mexican Heritage Plaza
1700 Alum Rock Ave., San Jose, CA 95116
This location is served by VTA Bus 22, 23, 77, and 522.

公開會議 VTA BART 矽谷捷運延長線第二階段項目

項目概況:

聯邦捷運系統管理局 (Federal Transit Administration,FTA) 和聖達卡拉谷交通局 (VTA) 負責為灣區捷運系統 (BART) 長約 6 哩延長線建議工程進行環境評估研究;這段延長線從聖荷西市 Berryessa BART 捷運站 (施工中) 起至聖達卡拉市為止。此項目包含四個捷運站:Alum Rock、Downtown San Jose、Diridon 和 Santa Clara 等站。此環境評估研究 將遵照聯邦環境政策法案 (National Environmental Policy Act,NEPA) 和加州環境品質法案 (CEQA) 的環境評估程序,編寫「環境影響書補充草案」(Supplemental Draft Environmental Impact Statement,SEIS) 和「環境影響報告第三次補充草案」(3rd Supplemental Draft Environmental Impact Report,SEIR3) 的綜合報告。SEIS/SEIR3草案 將對以下兩項備選方案進行分析:1)未來不興建 2) VTA BART 矽谷捷運延長線第二階段項目。SEIS/SEIR3草案將討論兩項備選方案的短期和長期環境影響。

VTA 將舉辦三次項目徵求意見會議,以聆聽民眾對此項目的意見。項目 徵求意見是環境評估程序的第一個步驟。項目徵求意見的目的是使旨在 將 SEIS/SEIR3 草案重點討論重大環境問題,詳細研究中不重要的影響 可以刪除,確定需要分析的備選方案。在項目徵求意見會議中,VTA 也 將通知民眾和其他機構有關 SEIS/SEIR3 草案編寫及參與此程序的事 宜。若要了解更多或提供意見,請參加其中一次的公開會議。所有會議 將提供相同的資訊。

項目網站: www.vta.org/bart

Reuniões Públicas: Fase II da extensão do BART em Silicon Valley, da VTA

Perspectiva geral do Projecto:

A Administração Federal do Trânsito (FTA) e a Entidade dos Transportes de Santa Clara Valley (VTA) estão a iniciar um estudo de impacto ambiental para a proposta de construção de uma extensão com aproximadamente 6 milhas (9,7 km) do Sistema de Trânsito Rápido da Bay Area (BART), desde a estação BART de Berryessa (que está a ser construída), em San Jose, até à Cidade de Santa Clara. O Projecto incluiria quatro estações: Alum Rock, centro da cidade (Downtown) de San Jose, Diridon e Santa Clara. O estudo de impacto ambiental estará em conformidade com o processo ambiental da Lei Federal de Política Ambiental Nacional (Federal National Environmental Policy Act (NEPA)) e da Lei de Qualidade Ambiental do Estado da Califórnia (California Environmental Quality Act (CEQA)), através da preparação de uma Declaração de Impacto Ambiental Complementar Preliminar (Supplemental Draft Environmental Impact Statement (SEIS)) e do 3º Relatório do Impacto Ambiental Complementar Preliminar (3rd Supplemental Draft Environmental Impact Report (SEIR3)), combinados. O SEIS/SEIR3 Preliminar incluirá uma análise das seguintes duas alternativas: 1) Não Construção no Futuro

3331 North First Street, San Jose, CA 95134-1927

Public Meetings: VTA's BART Silicon Valley Phase II Extension

MEETING DATES: February 12, 17, and 19, 2015

www.vta.org/bart

(Future No-Build) e 2) Fase II da extensão do BART em Silicon Valley, da VTA (VTA's BART Silicon Valley Phase II Extension Project). O SEIS/SEIR3 Preliminar irá abordar os impactos ambientais a curto e a longo prazo de ambas as alternativas do projecto.

A VTA efectuará três reuniões exploratórias para escutar os comentários acerca do projecto. A fase exploratória é o primeiro passo no processo ambiental. O propósito da fase exploratória é estreitar o foco do SEIS/SEIR3 Preliminar às questões ambientais significativas, eliminar impactos insignificantes do estudo detalhado e identificar alternativas que devam ser analisadas. A fase exploratória também serve para informar o público e outras repartições de que o SEIS/SEIR3 Preliminar está a ser preparado e que se vai iniciar o seu envolvimento no processo. Para se informar melhor ou para oferecer comentários, por favor participe numa das reuniões públicas. Todas as reuniões irão fornecer as mesmas informações.

Reuniões Públicas:

Reunião 1 – 12 de Fevereiro de 2015 (das 17:30 horas às 19:30 horas) Reunião aberta informal das 17:30 horas às 18:30 horas Apresentação formal das 18:30 horas às 19:30 horas

Santa Clara City Council Chambers 1500 Warburton Avenue, Santa Clara, CA 95050 Este local é servido pelos autocarros da VTA: 22, 32, 60 e 522.

Reuniones de la Comunidad: Fase II de la Extensión de BART en Silicon Valley de VTA

Panorama General del Proyecto:

La Administración Federal de Transporte (FTA) y Santa Clara Valley Transportation Authority (VTA) están iniciando un estudio ambiental para la propuesta construcción de una extensión de aproximadamente 6 millas del sistema Bay Area Rapid Transit (BART) desde Berryessa BART Station (la cual está bajo construcción) en San José a la Ciudad de Santa Clara. El Proyecto incluiría cuatro estaciones: las estaciones Alum Rock, Downtown San Jose, Diridon, y Santa Clara. El estudio ambiental estará en conformidad con el proceso ambiental de la Ley Nacional sobre Política Ambiental (NEPA, por sus siglas en inglés) y de la Ley de Calidad Ambiental del Estado de California (CEQA, por sus siglas en inglés) mediante la redacción de una Declaración Preliminar Suplemental del Impacto Ambiental (SEIS, por sus siglas en inglés) y un 3er Informe Preliminar Suplemental del Impacto Ambiental (SEIR3, por sus siglas en inglés). Las redacciones preliminares de SEIS/SEIR3 incluirán un análisis de las dos alternativas siguientes: 1) La futura no-construcción y 2) La Fase II del Proyecto de Extensión de BART en Silicon Valley de VTA. Las redacciones preliminares de SEIS/SEIR3 tratarán sobre los impactos ambientales a corto y largo plazo de ambos proyectos alternos.

VTA celebrará tres reuniones de estudio preliminar para escuchar los comentarios sobre el proyecto. La reunión del estudio preliminar es el primer paso en el proceso ambiental. El propósito de la reunión del estudio preliminar es de limitar el enfoque de la redacción Preliminar de SEIS/SEIR3 a los problemas ambientales importantes, eliminar del estudio detallado los impactos insignificantes e identificar las alternativas que serán analizadas. La reunión del estudio preliminar también sirve para dar aviso al público y a otras agencias de que la redacción Preliminar de SEIS/SEIR3 está siendo preparada y con ello inicia su participación en el proceso. Para informarse más o para ofrecer sus comentarios, le invitamos a acudir a una de las reuniones públicas. Se proporcionará la misma información en todas las reuniones.

Reuniones Públicas

1a Reunión - 12 de febrero de 2015 (de 5:30 p.m. a 7:30 p.m.) Reunión de puerta abierta, de 5:30 p.m. a 6:30 p.m. Presentación formal, de 6:30 p.m. a 7:30 p.m.

Salones del Concejo (Council Chambers) de la Ciudad de Santa Clara 1500 Warburton Avenue, Santa Clara, CA 95050

A este lugar se puede llegar utilizando las Líneas de Autobuses 22, 32, 60 y 522 de VTA.

2a Reunión - 17 de febrero de 2015 (de 5:30 p.m. a 7:30 p.m.) Reunión de puerta abierta, de 5:30 p.m. a 6:30 p.m.

Presentación formal, de 6:30 p.m. a 7:30 p.m.

Centro de Servicio al Pasajero de VTA

55 West Santa Clara Street, San Jose, CA 95113

A este lugar se puede llegar utilizando el tranvía y las Líneas de Autobuses 22, 63, 66, 68, 72, 73, 81, 82 y 522 de VTA.

3a Reunión - 19 de febrero de 2015: 5:30 p.m. a 7:30 p.m. Reunión de puerta abierta, de 5:30 p.m. a 6:30 p.m. Presentación formal, de 6:30 p.m. a 7:30 p.m.

School of Arts and Culture en Mexican Heritage Plaza

1700 Alum Rock Ave., San José, CA 95116

Các Buổi Họp Công Đồng: Dư Án Nối **Dài BART Silicon Valley Giai Đoan II** của VTA

Tổng Quan Dư Án:

Cơ Quan Quản Lý Vận Chuyển Liên Bang (FTA) và Cơ Quan Vận Chuyển Thung Lũng Santa Clara (VTA) đang bắt đầu một nghiên cứu môi trường cho dự án nối dài khoảng 6 dặm hệ thống Vận Chuyển Tốc Hành Vùng Vịnh (BART) từ Trạm Berryessa BART (đang xây cất) tại San Jose tới Thành Phố Santa Clara. Dự Án này sẽ bao gồm bốn trạm: Alum Rock, Trung Tâm San Jose, Diridon, và Santa Clara. Nghiên cứu môi trường này sẽ tuân thủ Đao Luât Liên Bang Chính Sách Môi Trường Quốc Gia (NEPA) và quy trình môi trường của Đao Luật Chất Lương Môi Trường tiểu bang California, qua việc chuẩn bị Dư Thảo Bổ Sung Tuyên Bố Tác Đông Môi Trường (SEIS) và Dư Thảo Bổ Sung Báo Cáo Tác Đông Môi Trường Lần 3 (SEIR3). Dư Thảo SEIS/SEIR3 sẽ phân tích hai lưa chon thay thế sau đây: 1) Không Xây Cất Trong Tương Tai (Future No-Build) và 2) Dư Án Nối Dài BART Silicon Valley Giai Đoạn II của VTA. Dự Thảo SEIS/SEIR3 sẽ để cập tới các tác động về môi trường ngắn hạn và dài han của cả hai lưa chon thay thế.

VTA sẽ tổ chức ba buổi họp trọng tâm để lắng nghe các ý kiến nhật xét về dự án này. Buổi họp trọng tâm là bước đầu tiên trong quy trình về môi trường. Mục đích của buổi họp trọng tâm là tóm tắt lại trọng tâm của Dự Thảo SEIS/SEIR3, tập trung vào các vấn đề môi trường đáng kể, loại bỏ các tác động không đáng kể từ nghiên cứu chi tiết, và xác định các lựa chọn thay thế cần phân tích. Buổi họp trọng tâm cũng thông báo cho cộng đồng và các cơ quan khác rằng Dự Thảo SEIS/SEIR3 đang được chuẩn bị và bắt đầu tham gia vào quy trình. Để tìm hiểu thêm hoặc đóng góp ý kiến nhân xét, xin quý vi vui lòng tham dư một trong các buổi họp công đồng. Tất cả các buổi họp đều cung cấp thông tin giống nhau.

Các Buổi Họp Cộng Đồng

Buổi Hop 1 - ngày 12 tháng Hai, 2015 (5:30 chiều - 7:30 tối) Giới Thiệu Thông Tin 5:30 chiều - 6:30 tối Trình Bày Chính Thức 6:30 tối - 7:30 tối Phòng Hôi Đồng Thành Phố Santa Clara (Santa Clara City Council Chambers) 1500 Warburton Avenue, Santa Clara, CA 95050

공청회: VTA의 BART 실리콘밸리 2단계 연장사업

사업 개요:

미국연방교통국(FTA, Federal Transit Administration)과 산타클라라 밸리 교통국(VTA)은 산호세 Berryessa BART 역(건설 중)에서부터 산타클라라 시까지 BART를 약 6마일 연장하는 사업인과 관련하여 환경영향평가를 위한 연구를 시작할 예정입니다. 이번 사업에는 Alum Rock, Downtown San Jose, Diridon, Santa Clara의 네 개 역이 포함될 것입니다. 환경영향평가를 위한 연구는 추가환경영향평가서 초안(SEIS, Supplemental Draft Environmental Impact Statement) 및 제3차 추가환경영향평가보고서 초안(SEIR3, Supplemental Draft Environmental Impact Report)을 함께 작성하여 연방 국가환경정책법(NEPA. National Environmental Policy Act)과 캘리포니아환경품질법(CEQA, California Environmental Quality Act)에 따른 환경보호 절차를 준수하게 됩니다. SEIS/SEIR3 초안에는 다음의 두 가지 대안을 분석한 내용이 포함됩니다. 1) 향후 미 건설, 2) VTA의 BART 실리콘밸리 2단계 연장사업. SEIS/SEIR3 초안에서는 두 가지 대안이 장단기적으로 환경에 미치는 영향에 대해 다루게 됩니다.

VTA는 본 사업에 대한 의견을 수렴하기 위한 설계회의를 세 차례에 걸쳐 개최할 예정입니다. 설계회의는 환경영향평가를 위한 첫 번째 절차입니다. 설계회의의 목적은 SEIS/SEIR3 초안의 초점을 중대한 환경 사안으로 좁히고, 미미한 영향에 관한 부분은 세부 연구에서 제외하는 동시에 분석할 대안을 파악하는 것입니다. 또한 설계회의를 통해 시민들과 기타 기관에 SEIS/SEIR3 초안을 준비하고 있다는 점을 알리고 전 과정에 이들의 참여를 이끌어 냅니다. 보다 자세한 정보를 듣고 의견을 제시하려면 공청회에 참석해 주시기 바랍니다. 세 차례에 걸친 모든 공청회에서는 동일한 정보가 제공됩니다.

1차 공청회 - 2015년 2월 12일 (오후 5:30 ~ 오후 7:30) 식전 프로그램 오후 5:30 ~ 오후 6:30

공식 발표 오후 6:30 ~ 오후 7:30 산타클라라 시의회(Santa Clara City Council Chambers) 1500 Warburton Avenue, Santa Clara, CA 95050 VTA 버스 22, 32, 60, 522번이 운행됩니다.

2차 공청회 - 2015년 2월 17일 (오후 5:30 ~ 오후 7:30) 식전 프로그램 오후 5:30 ~ 오후 6:30 공식 발표 오후 6:30 ~ 오후 7:30

VTA 고객서비스센터(VTA Customer Service Center) 55 West Santa Clara Street, San Jose, CA 95113 VTA 버스 22, 63, 66, 68, 72, 73, 81, 82, 522번과 VTA 경전철이 은행됩니다.

3차 공청회 - 2015년 2월 19일 (오후 5:30 ~ 오후 7:30) 식전 프로그램 오후 5:30 ~ 오후 6:30 공식 발표 오후 6:30 ~ 오후 7:30 Mexican Heritage Plaza, School of Arts and Culture 1700 Alum Rock Ave, San Jose, CA 95116

VTA 버스 22, 23, 77, 522번이 운행됩니다.

의견 제출 방법:

의견을 작성한 후 **2015년 3월 2일** 월요일까지 우편 또는 이메일을 통해 보내주십시오.

VTA's BART Silicon Valley Phase II Extension Kicks Off with Three Public Meetings in February

2/10/2015 10:18 AM | Brandi Childress

in 8⁺ 🖘

16

The Federal Transit Administration (FTA) and the Santa Clara Valley Transportation Authority (VTA) are initiating an environmental study for the proposed construction of an

approximately 6-mile extension of BART from the now under construction Berryessa BART Station in San Jose to the City of Santa Clara. The Project is planned to include four stations: the Alum Rock, Downtown San Jose, Diridon, and Santa Clara Stations.

The environmental study will be in compliance with the federal National Environmental Policy Act (NEPA) and state California Environmental Quality Act (CEQA) environmental process. The combined report will address short- and long-term environmental impacts after analyzing a no-build approach or a build-out approach known as VTA's BART Silicon Valley Phase II Extension Project.

VTA will be holding three public meetings during this first phase of the environmental process known as the scoping period. The purpose of scoping is to narrow the focus of the study to significant environmental issues, eliminate insignificant impacts from detailed analysis, and identify alternatives to be analyzed. Scoping also notices the public and initiates their involvement in the process. All three meetings will feature an open house from 5:30 p.m. to 6:30 p.m. and a formal presentation and comment period from 6:30 p.m. to 7:30 p.m.

BART Silicon Valley

VTA's Bay Area Rapid Transit (BART) Silicon Valley Project is a 16-mile extension of the existing BART system to San Jose, Milpitas and Santa Clara, which will be delivered through a phased approach. The first phase, the Berryessa Extension, is a 10-mile, twostation extension, beginning in Fremont south of the future BART Warm Springs Station and proceeding in the former Union Pacific Railroad right-of-way through Milpitas, the location of the first station, and then to the Berryessa area of north San Jose, at the second station. VTA continues project development activities for the second phase of the project that includes a subway tunnel through downtown San Jose. Construction on the second phase of the project will commence as additional funding is secured.

For more information, please contact VTA Community Outreach at (408) 934-2662, TTY (408) 321-2330, or visit www.vta.org/bart.

Environmental Scoping Meetings February 2015

Meeting Schedule

Open house

5:30 p.m. to 6:30 p.m.

Presentation and comment period

6:30 p.m. to 7:30 p.m.

Meeting Agenda

- Welcome/Meeting purpose
- Project overview
- Environmental process
- Public comments on scope of environmental document
- Next steps
- Adjournment

What is Scoping?

- The process of determining the focus and content (scope) of an environmental document through public outreach.
- Provides notice to the public and other agencies that a draft environmental document is being prepared, and initiates their involvement in the process.

Scoping ~ Environmental Kick-off

- Scoping period January 30, 2015 March 2, 2015
- Scoping Meetings:

February 12, 2015, 5:30 p.m.— 7:30 p.m. City of Santa Clara Council Chambers

February 17, 2015, 5:30 p.m.— 7:30 p.m. VTA Customer Service Center, Downtown San Jose

February 19, 2015, 5:30 p.m.— 7:30 p.m. School of Arts and Culture at Mexican Heritage Plaza

Public Comments at Scoping Meetings

- Verbal comments at the scoping meetings will be recorded by a court reporter
- Please submit a speaker card if you wish to speak
- Speakers will be called up in order
- Comments will be recorded

Project Overview

Approved California Environmental Quality Act (CEQA) Project

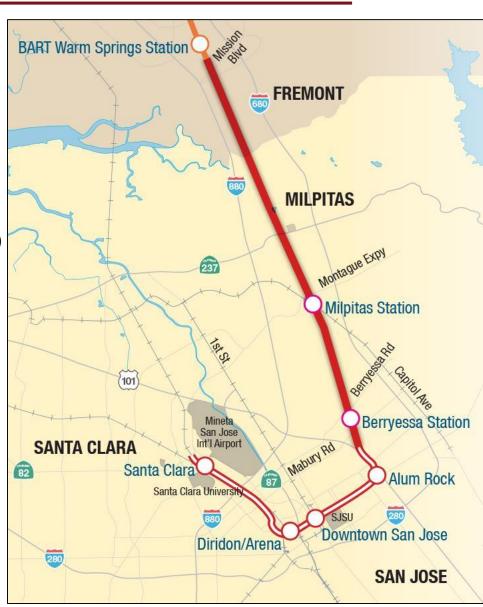

Berryessa Extension Project

- 10-mile extension under construction
- Two stations: (Milpitas and Berryessa)
- Forecast opening: Fall 2017
- Anticipated opening day ridership: 23,000

Phase II Extension

- 6-mile extension
- Four stations (Alum Rock, Downtown San Jose, Diridon, Santa Clara), and Newhall Yard maintenance facility
- Anticipated year 2035 ridership: 55,000

Project Purpose

- Improve public transit service
- Enhance regional connectivity
- Increase transit ridership
- Support transportation solutions that will maintain the economic vitality and continuing development of Silicon Valley
- Improve mobility options
- Enhance level and quality of transit service to areas of existing and planned affordable housing
- Improve regional air quality
- Support local and regional land use plans

Alternatives to be Evaluated

- No-Build Alternative (Berryessa Extension Project)
- Build Alternative (Six-mile, 4-Station extension with maintenance facility)

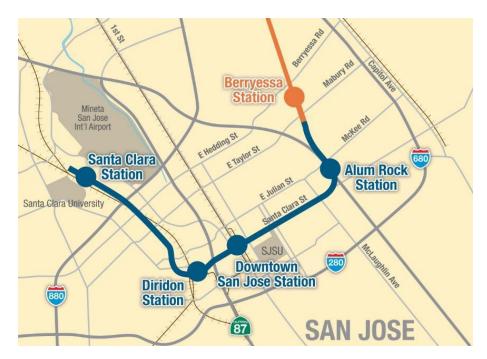

Build Alternative: Phase II Extension Project

Build Alternative: Phase II Extension Project

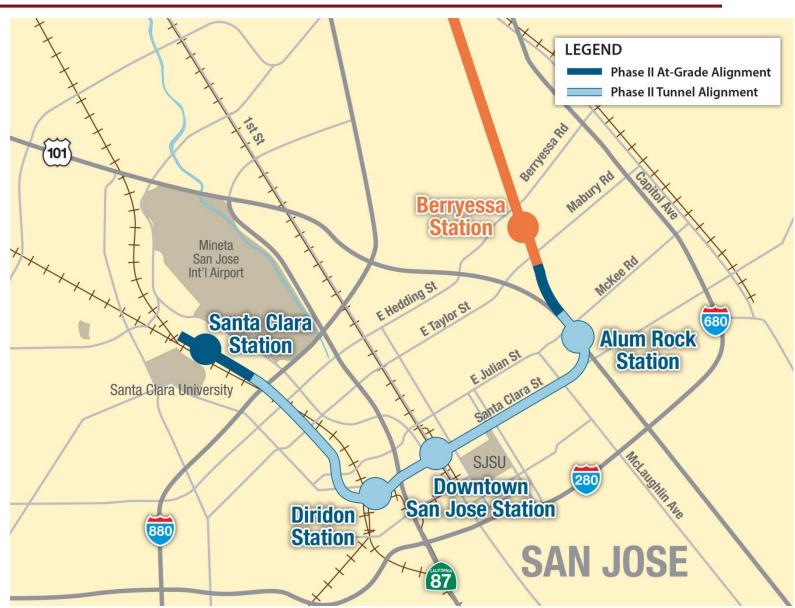

- 6-mile extension
- 4 Stations
 - Alum Rock (underground)
 - Downtown San Jose (underground)
 - Diridon (underground)
 - Santa Clara (at-grade)

- Maintenance Facility in San Jose/Santa Clara
- Anticipated ridership of 55,000

Future Community Engagement Activities

- Ongoing community outreach and engagement during environmental process
- Focused Outreach Sessions Spring 2015, some topics may include:
 - Economic and Community Benefits
 - Funding
 - Station Planning
 - Transportation connectivity
 - Station walking tours
 - Construction Methods

Environmental Process

Project History – Environmental Studies

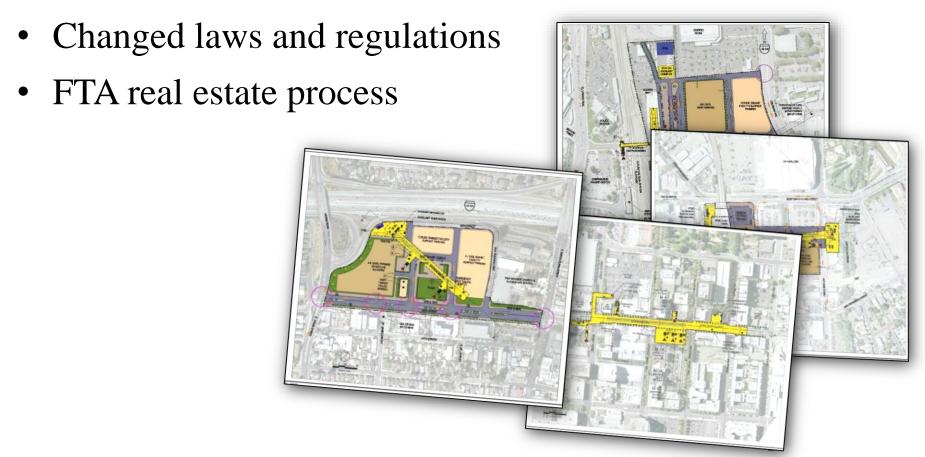

- 2004 State clearance (CEQA) on Final Environmental Impact Report (EIR): 16-mile project
- 2007 CEQA clearance on Final Supplemental EIR (SEIR): 16-mile project
- 2010 Federal clearance National Environmental Policy Act (NEPA) on Final Environmental Impact Statement (EIS): 10-mile project
- 2011 CEQA clearance on 2nd SEIR: 10-mile project
- 2015 Joint CEQA and NEPA document (SEIS/SEIR3): 6-mile project

Supplemental EIS/3rd Supplemental EIR

- Minor changes to project
- Integration with updated land-use and development plans

Purpose of Scoping Meeting

- Describe proposed project and environmental review process
- Early consultation process to solicit input on document scope to address potential major environmental issues
- Scoping does not result in the ultimate decision or selection of an alternative

Objectives of the Environmental Document

- Document environmental impacts from project features
- Gather public input
- Coordinate with federal, state, and other agencies
- Provide decision makers with environmental information

Environmental Review Steps

Initiate Environmental Process

Early Consultation/Scoping

BART Silicon Valley Extension Project FACT SHEET

Overview

VTA is extending the BART regional heavy rail system to Milpitas, San Jose and Santa Clara. The 16-mile extension will travel along the existing Union Pacific Railroad alignment south of the future Warm Springs Station in Fremont to Milpitas and North San Jose, and then will tunnel underneath downtown San Jose, rising to street level in Santa Clara. When completed, this fully grade-separated project is planned to include: six stations — one in Milpitas, four in San Jose and one in Santa Clara; a 5-mile tunnel in downtown San Jose; and a new maintenance and storage facility in Santa Clara.

Project Benefits:

Improves Connectivity:

The new extension will connect Santa Clara County residents to a 109-mile BART system including the cities of San Francisco and Oakland. The project will provide enhanced commuter connections to VTA Light Rail and Buses, Caltrain, Altamont Commuter Express, Capitol Corridor and Amtrak, as well as planned connections to Mineta San Jose International Airport and High Speed Rail.

• Supports the Economy:

This project will create thousands of temporary and permanent jobs in the region while supporting local and regional transit-oriented development along the corridor. The project provides a high return on investment: for every dollar spent on construction, and operations and maintenance, approximately 4 to 10 dollars will be returned to the region.

• Enhances the Community:

BART Silicon Valley creates more options where we work and live by serving downtown San Jose, San Jose State University, SAP Center, Santa Clara University, major employment and shopping centers and other cultural destinations. The project will offer a new transit option for commuters and connect residents to the rest of the Bay Area region.

Responsible to the Environment:

Taking cars off congested corridors eliminates 16,000 tons of greenhouse gases per year, decreasing foreign oil dependency and global warming.

Delivering VTA's BART Silicon Valley

VTA's BART Silicon Valley Extension will be delivered in phases. The first phase is the Berryessa Extension, a 10-mile, two station project that begins at the future Warm Springs Station in Fremont and ends in the Berryessa area of north San Jose. The Berryessa Extension project received significant funding from the federal New Starts Program. Design and engineering of this phase is complete, and construction began in 2012. The state and federal process will begin on VTA's BART Phase II project in early 2015.

Project Support

- In 2000, over 70% of Santa Clara County voters approved a 30-year, half-cent local sales tax measure for transit, with BART Silicon Valley as the priority project.
- In 2008, over 66% of Santa Clara County voters approved an additional eighth-cent sales tax to fund BART Silicon Valley's annual operating and maintenance expenses once state and federal funding have been secured.
- Local and regional support from the Silicon Valley Leadership Group, San Jose Chamber of Commerce, local governments, and other labor and business organizations.
- The Metropolitan Transportation Commission, the transportation planning and financing agency for the nine-county San Francisco Bay Area, has included the project in its current Regional Transportation Plan.
- Recommended for Federal New Starts Program Full Funding Grant Agreement for project's first phase.

What's Next

Phase I-Berryessa Extension

• Construction	017
• System Testing	017
• Passenger Service	118*

* Current construction proposals include accelerated schedules, therefore passenger service may begin sooner.

Phase II

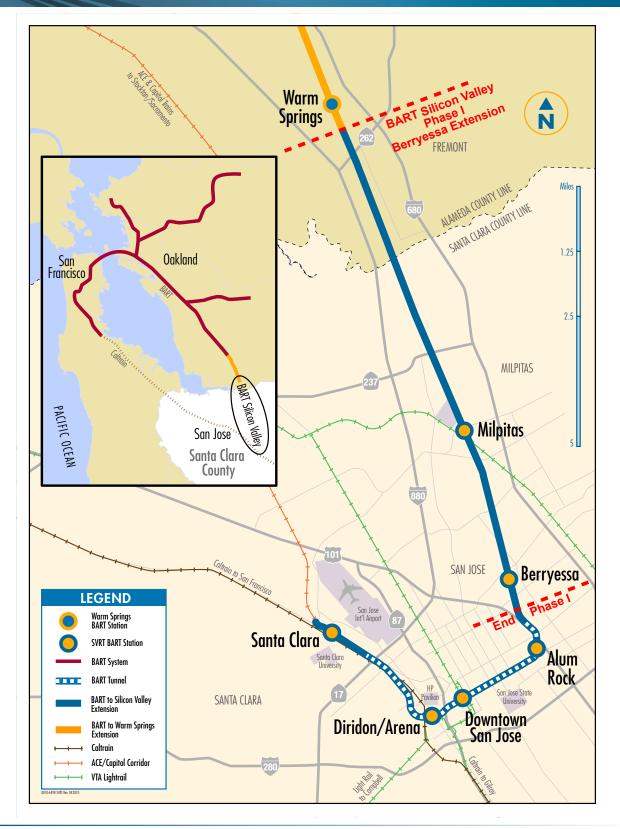

- Begin State and Federal Environmental Process January 2015
 Persue Federal Funding
- on Recommended Project First Quarter 2016

How to Reach Us

For more information about VTA's BART Silicon Valley, please contact VTA-BART Community Outreach (408) 934-2662, TTY for the hearing impaired (408) 321-2330. You may also visit us on the web at www.vta.org/bart, or email us at vta.org.

BART Silicon Valley Extension Project FACT SHEET

BSV 120114

BART 矽谷捷運線 説明書

概況

BART 矽谷捷運線包括:將 BART 重軌系統延伸至苗必達市、聖荷西市和聖達卡拉市。這段 16 英哩捷運延長線將從佛利蒙市未來的 Warm Springs 車站以南開始,沿著目前的聯合太平洋鐵路 (Union Pacific Railroad) 行進,通往苗必達市和聖荷西市北部,然後轉入聖荷西市區中心地下隧道通行,進入聖達卡拉市後再升高至地面街道行駛。這項完全採取立體交叉結構的項目完工後將包括:六個車站 - 一個位於苗必達市、四個在聖荷西市,另一個在聖達卡拉市;聖荷西市區中心的 5 哩隧道;以及聖達卡拉市內一處全新的維修倉儲設施。

項目收益

• 改善交通網的銜接:

BART 捷運新延長線建成之後,聖達卡拉縣居民將能夠使用可通達舊金山和屋崙市的全長達 109 哩的BART 捷運系統。項目完成之後,通勤將更加便利,可銜接 VTA 輕軌鐵路和公車、Caltrain、Altamont Commuter Express、Capitol Corridor 和 Amtrak 鐵路,將來還計劃銜接至 Mineta 聖荷西國際機場和高鐵 (High Speed Rail)。

• 支持經濟:

此項目將為沿線區域創造數千個臨時和固定工作機會,同時還將支援捷運通道上地方和區域的運輸相關發展。 此項目的投資報酬率很高:工程、營運和維修方面每 支出 1 美元,沿線區域可獲得約 4 至 10 美元的回饋。

• 提升社區生活:

BART 矽谷捷運線為我們的工作和生活提供更多選擇, 沿線將服務聖荷西市區中心、聖荷西州立大學、HP Pavilion、聖達卡拉大學、主要辦公區域和購物中心以 及其他文化景點。此項目將為通勤者提供交通新選項, 使居民連接至灣區其他地區。

• 有助實現環保:

減少行駛車輛,舒緩道路堵塞,每年可因此減少 16,000 噸的廢氣排放量,降低對外國石油的倚賴性和 全球暖化效應。

BART 矽谷捷運線工程電施

BART 矽谷捷運線將分階段實施。第一階段是全長 10 哩包括兩個車站的 Berryessa 捷運延長線,從未來的佛利蒙市 Warm Springs 車站開始,最後以聖荷西市北邊的 Berryessa 區為終點。聯邦新氣象方案 (New Starts Program) 目前為 Berryessa 捷運延長線項目提供大筆資金。此階段的設計和工程已近完成,施工則預計於2012 年開始進行。BART 矽谷捷運線最後六哩的項目開發活動則在繼續進行中。

項目支援

- 2000年,聖達卡拉縣70%選民通過為期30年徵收 二分之一美分地方銷售稅的交通議案。BART 矽谷捷 運線是此議案列為優先進行的項目。
- 2008年,聖達卡拉縣超過66%選民同意,一旦 BART 矽谷捷運線建設順利獲得加州和聯邦資金,即 可增加八分之一美分銷售稅,以支付BART 矽谷捷運 線的年度營運和維修費用。
- 以下地方和區域團體提供了支援:矽谷領導團體 (Silicon Valley Leadership Group)、聖荷西商會 (San Jose Chamber of Commerce)、地方政府和其他勞工 和商業組織。
- 都市交通委員會 (Metropolitan Transportation Commission) 已將此項目納入其目前的區域交通計劃 (Regional Transportation Plan)。該委員會是舊金山灣區九縣的 交通規劃和財務機構。
- 此項目第一階段獲推薦實施聯邦新出發方案 (Federal New Starts Program) 的「完全撥款協議」(Full Funding Grant Agreement)。

接下來的工作

Berryessa 捷運延長線第一階段

● 9 億美元聯邦補助款 2012 年 3 月	
• 施工 2012-2016 年	
• 系統測試 2016-2017 年	
• 客運服務	
* 目前的施工提案有加速工期的內容,因此客運服務可能會提 前開始。	3

最後6哩

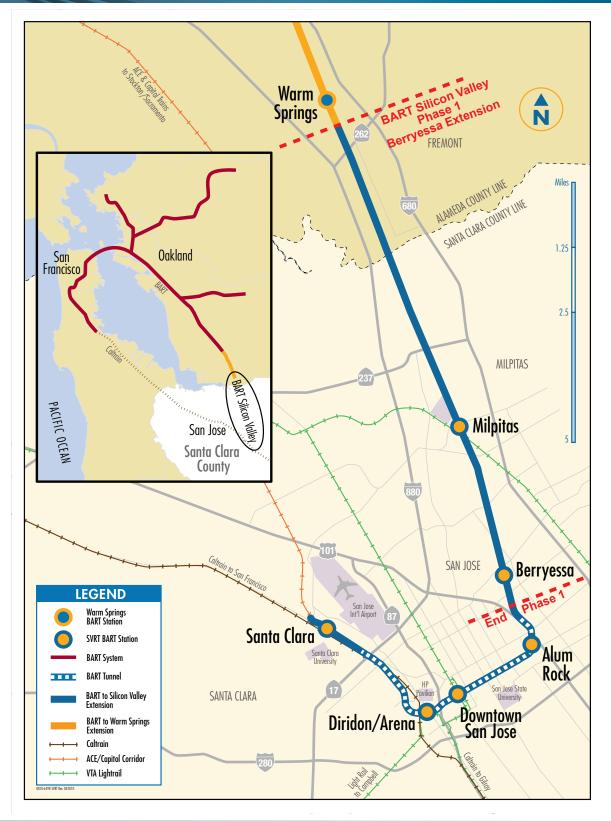

• 獲得贊助資金

如何與我們聯絡

欲了解有關 BART 矽谷捷運線的詳情,請致電 (408) 934-2662 與 VTA-BART 社區外展部 (Community Outreach) 聯絡;聽障者請致電 TTY 專線 (408) 321-2330。您亦可上網站 www.vta.org/bart 瀏覽,或寄電子郵件至 vtabart@vta.org 與我們聯絡。

BART 矽谷捷運線 説明書

BSV 102811

BART Silicon Valley HOJA INFORMATIVA

Panorama general

Bay Area Rapid Transit (BART) Silicon Valley consiste en la extensión del sistema ferroviario pesado BART a Milpitas, San José y Santa Clara. La extensión de 16 millas de longitud seguirá la alineación ya existente del ferrocarril de Union Pacific Railroad al sur de lo que en el futuro será la estación Warm Springs en Fremont hacia Milpitas y el norte de San José, y luego pasará por un túnel subterráneo bajo el centro de San José para emerger a nivel de la calle en Santa Clara. Se ha planificado que, en su conclusión, este proyecto de cruce totalmente separado incluirá: seis estaciones — una en Milpitas, cuatro en San José y una en Santa Clara; un túnel de 5 millas de extensión en el centro de San José, y nuevas instalaciones de mantenimiento y almacenamiento en Santa Clara.

Beneficios del Proyecto:

Mejora las conexiones:

La nueva extensión comunicará a los residentes del Condado de Santa Clara con las 109 millas de extensión del sistema BART, incluyendo las ciudades de San Francisco y Oakland. Este proyecto proporcionará mejores conexiones a los pasajeros habituales con los tranvías y autobuses de VTA, Caltrain, Altamont Commuter Express, Capitol Corridor y Amtrak, y también con conexiones planificadas al Aeropuerto Internacional Mineta de San José y al Ferrocarril de Alta Velocidad.

· Apoya la economía:

Este proyecto creará miles de empleos tanto temporales como permanentes en la región mientras que, al mismo tiempo, da apoyo a obras de desarrollo de transporte tanto local como regional a lo largo del trayecto. El proyecto proporciona un alto rendimiento por la inversión: por cada dólar invertido en las obras de construcción, en las operaciones y en mantenimiento, se generará aproximadamente de 4 a 10 dólares en la región.

Mejora la comunidad:

BART Silicon Valley crea un mayor número de opciones en donde trabajamos y vivimos al brindar servicio en el centro de San José, San Jose State University, HP Pavilion, Santa Clara University, importantes centros de empleo y áreas comerciales, así como otros destinos culturales. El proyecto les ofrecerá a los pasajeros habituales una nueva opción de transporte y conectará a los residentes con el resto de la región de Área de la Bahía.

• Es responsable del ambiente:

El hecho de retirar automóviles de las congestionadas carreteras elimina 16,000 toneladas de gases de invernadero al año, disminuyendo así nuestra dependencia en el petróleo extranjero y reduciendo el calentamiento global.

Entrega de las obras de BART Silicon Valley

El proyecto BART Silicon Valley será entregado en fases. La primera fase es la Extensión a Berryessa, proyecto de 10 millas de extensión con dos estaciones que inicia en la futura estación de Warm Springs en Fremont y termina en el área de Berryessa, norte de San José. El proyecto de Extensión a Berryessa recibe una cantidad importante de financiamiento por parte del programa federal New Starts. Las actividades de diseño e ingeniería de esta fase están a punto de concluir y las obras de construcción darán inicio en 2012. Continúan las actividades de desarrollo de las últimas seis millas del proyecto BART Silicon Valley.

Apoyo al proyecto

- En 2000, más del 70% de los votantes del Condado de Santa Clara aprobó una medida de medio centavo en los impuestos locales de ventas durante 30 años para fines de transporte, dándole importancia prioritaria al proyecto BART Silicon Valley.
- En 2008, más del 66% de los votantes del Condado de Santa Clara aprobó un aumento adicional de un octavo de centavo en los impuestos de ventas destinado a financiar los gastos anuales de operación y mantenimiento de BART Silicon Valley una vez que se haya garantizado el financiamiento estatal y federal.
- Apoyo local y regional por parte del Silicon Valley Leadership Group, San Jose Chamber of Commerce, los gobiernos locales y otras organizaciones sindicales y empresariales.
- La Comisión Metropolitana de Trasporte (Metropolitan Transportation Commission), la cual es la agencia de planificación y financiamiento del transporte en los nueve condados del Área de la Bahía, ha incluido este proyecto en su Plan de Transporte Regional actual.
- La primera fase del proyecto está recomendada por el Federal New Starts Program Full Funding Grant Agreement.

¿Qué sigue?

Fase 1-Extensión a Berryessa

• Subvención federal de \$900 millones Ma	arzo de 2012
• Construcción	. 2012-2016
• Realización de pruebas del sistema	. 2016-2017
Servicio a los pasaieros	2018*

^{*} Las propuestas actuales de construcción incluyen calendarios acelerados, por lo que el servicio a pasajeros podría dar inicio antes de lo planificado.

Cómo comunicarse con nosotros

Si desea obtener mayor información sobre el proyecto BART Silicon Valley, por favor sírvase comunicarse con el programa de extensión en la comunidad, Community Outreach de VTA-BART al (408) 934-2662, TDD para personas con incapacidades auditivas (408) 321-2330. También puede visitarnos en Internet en www.vta.org/bart, o enviarnos un e-mail a vtabart@vta.org.

BART Silicon Valley HOJA INFORMATIVA

BSV 102811

BART Silicon Valley TÖ THÔNG TIN

Tổng Quan

Cơ Quan Vận Chuyển Tốc Hành Vùng Vịnh (BART) Silicon Valley đang mở rộng hệ thống đường sắt trong vùng của BART tới Milpitas, San Jose và Santa Clara. Đoạn đường mở rộng dài 16 dặm sẽ đi dọc theo Union Pacific Railroad hiện tại thẳng phía nam Nhà Ga Warm Springs tương lai tại Fremont đến Milpitas và Bắc San Jose, và sau đó sẽ đi ngầm dưới trung tâm San Jose, và đi lên trên tại Santa Clara. Khi hoàn thành, dự án đường lập thể đầy đủ này dự tính bao gồm: sáu nhà ga — một nhà ga tại Milpitas, bốn nhà ga tại San Jose và một nhà ga tại Santa Clara; một đường hầm dài 5 dặm tại trung tâm San Jose; và một cơ sở bảo hành và kho chứa mới tai Santa Clara.

Các Lơi Ích của Dư Án:

• Tăng Khả Năng Kết Nối:

Đường mới mở rộng này sẽ đưa các cư dân Quận Santa Clara tới hệ thống BART dài 109 dặm trong đó bao gồm các thành phố San Francisco và Oakland. Dự án này sẽ tăng khả năng kết nối với Xe Điện và Xe Buýt VTA, Caltrain, Altamont Commuter Express, Đường Vành Đai Capitol (Capitol Corridor) và Amtrak, cũng như kết nối theo dự tính với Sân Bay Quốc Tế Mineta San Jose (Mineta San Jose International Airport) và Xe Điện Cao Tốc (High Speed Rail).

Phát Triển Kinh Tế:

Dự án này sẽ tạo ra hàng nhiều ngàn công việc tạm thời và việc làm ổn định trong vùng và giúp phát triển giao thông địa phương và khu vực dọc theo đường vành đai. Dự án này đem lại hiệu quả cao về mặt đầu tư: Với mỗi đô la chi cho việc xây cất, hoạt động và bảo hành, khoảng 4 tới 10 đô la sẽ tạo cho vùng.

• Nâng Cao Cộng Đồng:

BART Silicon Valley tạo ra nhiều lựa chọn hơn tại nơi chúng ta sống và làm việc bằng việc phục vụ trung tâm San Jose, trường San Jose State University, HP Pavilion, trường Santa Clara University, các trung tâm việc làm và mua sắm chính và các địa điểm văn hóa khác. Dự án sẽ đưa ra lựa chọn giao thông mới cho khách thông hành và kết nối các cư dân tới khu vực còn lai của Vùng Vinh.

• Có Trách Nhiệm Đối Với Môi Trường:

Đưa xe hơi ra khỏi các con đường vành đai tắc nghẽn loại bỏ được 16,000 tấn khí thải nhà kính mỗi năm, giảm lệ thuộc vào nguồn dầu lửa từ nước ngoài và giảm hiện tượng ấm nóng toàn cầu.

Thực hiện dự án BART Silicon Valley

Dự án BART Silicon Valley sẽ thực hiện theo các giai đoạn. Giai đoạn đầu tiên là Đường Nối Dài Berryessa, dài 10 dặm, có hai nhà ga bắt đầu từ Nhà Ga Warm Springs tương lai tại Fremont và kết thúc tại khu vực Berryessa thuộc phía bắc của San Jose. Dự Án Nối Dài Berryessa nhận được sự tài trợ mạnh mẽ từ Chương Trình Khởi Đầu Mới (New Starts Program) của liên bang. Giai đoạn thiết kế và kỹ thuật đã gần hoàn tất, và việc xây dựng sẽ được bắt đầu vào năm 2012. Các sinh hoạt phát triển dự án BART Silicon Valley sẽ được tiếp tực vào sáu dặm còn lại.

Trợ Giúp Dự Án

- Vào năm 2000, hơn 70% cử tri Quận Santa Clara đã phê chuẩn một đạo luật về giao thông 30 năm, nửa xu tiền thuế bán hàng địa phương, với BART Silicon Valley là dự án ưu tiên.
- Vào năm 2008, hơn 66% cử tri Quận Santa Clara đã chấp thuận một khoản tiền thuế bán hàng thêm tám xu để tài trợ cho chi phí hoạt động và bảo hành hàng năm của BART Silicon Valley một khi ngân quỹ tiểu bang và liên bang đã được bảo đảm.
- Trợ giúp địa phương và vùng từ Nhóm Lãnh Đạo Silicon Valley (Silicon Valley Leadership Group), Phòng Thương Mại San Jose (San Jose Chamber of Commerce), các chính quyền địa phương, và các tổ chức lao động và kinh doanh khác.
- Ủy Ban Vận Chuyển Đô Thị (Metropolitan Transportation Commission), cơ quan quy hoạch và tài trợ giao thông cho chín quận vùng Vịnh San Francisco, đã đưa dự án này thuộc Kế Hoạch Vận Chuyển Vùng (Regional Transportation Plan) hiện tại của cơ quan.
- Đề Nghị Thỏa Thuận Ngân Quỹ Tài Trợ Đầy Đủ (Full Funding Grant Agreement) thuộc Chương Trình Bắt Đầu Mới Liên Bang (Federal New Starts Program) cho giai đoạn đầu tiên của dự án.

Hoat Đông Tiếp Theo

Giai đoạn 1- Dự án Đường Nối Dài Berryessa

•	\$900 triệu quỹ liên bang		Tháng Ba 2012
•	Xây cất		2012-2016
•	Thử Nghiệm Hệ Thống		2016-2017
•	Dịch Vụ Hành Khách		2018*
*	Các dự án xây dựng hiện tại đều bao gồm lịch	trình tặng tốc	, dịch vụ hành khách

Opportunities for Public Participation and Input (continued)

VTA Board Defines Final SEIS/SEIR3 Project (Spring 2016)

What VTA will do:

- Present the findings of the Draft SEIS/SEIR3 to the VTA Board of Directors. The VTA Board will define the Final SEIS/ SEIR3 Project that will be entered into the Federal Transit Administration (FTA) New Starts funding program to seek federal funding.
- Submit application to FTA to enter the New Starts Project Development phase in the funding process.

What the public can do:

- **Attend VTA's BART Silicon Valley Program Working Committee (PWC) meeting in March 2016.
- Provide comments to the VTA Board on the Project in April 2016 to be submitted into the New Starts evaluation process.

Prepare and Circulate Final SEIS/SEIR3 (Spring-Winter 2016)

What VTA will do:

 Prepare responses to comments on the Draft SEIS/SEIR3 for inclusion in the Final SEIS/SEIR3.

• Circulate the Final SEIS/SEIR3 for public review in Winter 2016.

What the public can do:

Review the Final SEIS/SEIR3 during the 30-day public review period and provide comments to the VTA Board of Directors or FTA for them to consider before project approval.

VTA and FTA Approval of SEIS/SEIR3 (Late Winter-Early Spring 2017)

What VTA will do:

 Present the findings of the Final SEIS/SEIR3 to the VTA Board of Directors who will certify the SEIR3, and approve the Project

What FTA will do:

 Consider the project and environmental impacts and consider amending the 2010 Record of Decision (ROD) in early Spring 2017. The 16-mile, 6-station project was evaluated in the 2009 Draft EIS, but FTA issued the ROD for a 10mile, 2-station project. FTA will now consider approving the remaining 6 miles and 4 stations discussed in the 2009 Draft EIS; therefore, a new ROD is not required.

Important Key Dates:

Scoping Meeting 1 February 12, 2015 (5:30 p.m. – 7:30 p.m.)

Santa Clara City Council Chambers 1500 Warburton Avenue, Santa Clara, CA 95050

Scoping Meeting 2

February 17, 2015 (5:30 p.m. – 7:30 p.m.)

VTA Customer Service Center 55-A West Santa Clara Street, San Jose, CA 95113

Scoping Meeting 3

February 19, 2015 (5:30 p.m. – 7:30 p.m.)

School of Arts and Culture at Mexican Heritage Plaza 1700 Alum Rock Avenue, San Jose, CA 95116

Outreach Sessions

VTA's BART Silicon Valley Phase II Extension Project ENVIRONMENTAL PROCESS

This fact sheet includes information related to the environmental analysis for VTA's BART Silicon Valley Phase II Project and summarizes opportunities for the public to gain information, be engaged, and provide valuable feedback.

Phase II Overview

VTA's Bay Area Rapid Transit (BART) Silicon Valley Program is a voter—approved, regional transportation project that is planned to extend BART from southern Fremont in Alameda County through the cities of Milpitas, San Jose, and Santa Clara in Santa Clara County. Once completed, the project will close a significant gap in the regional rail system and provide commuter rail connections to the region's three major metropolitan centers: San Jose. San Francisco, and Oakland.

VTA's BART Silicon Valley Program is being built in phases. VTA's BART Silicon Valley Berryessa Extension Project (Phase I) is currently under construction and is projected to open in late 2017. VTA's BART Silicon Valley Phase II Extension Project (Phase II) will include a 5-mile long subway tunnel through downtown San Jose and will extend the BART system from the future Phase I terminus for approximately six miles. Four stations are proposed for Phase II: Alum Rock, Downtown San Jose, Diridon, and Santa Clara,

VTA received California Environmental Quality Act (CEQA) clearance (required by the state government) in 2004 and in 2007 for the full 16-mile, six-station BART Silicon Valley Program. Following the 2004 and 2007 CEQA clearances, and at the recommendation of the Federal Transit Administration (FTA), VTA decided to build the project in phases. VTA entered into the FTA New Starts grant funding program in 2009 and received National Environmental Policy Act (NEPA) clearance (required by the federal government) in 2010 for Phase I. FTA's New Starts program is the federal

government's primary discretionary financial resource for supporting local major transit infrastructure projects. An FTA New Starts funding agreement for Phase I was executed in 2012.

Phase II of VTA's BART Silicon Valley Program requires an approved Supplemental Environmental Impact Statement/Report (SEIS/ SEIR) to become eligible for federal and state funding. A combined Supplemental EIS/3rd Supplemental EIR (SEIS/SEIR3) will be developed to evaluate and environmentally clear Phase II of VTA's BART Silicon Valley Program.

BART2-ENVIRON 1/30/15

VTA's BART Silicon Valley Phase II Extension Project

Why an SEIS/SEIR3?

NEPA and CEQA require government agencies to identify adverse environmental impacts associated with a project and to avoid, minimize, or mitigate those adverse impacts.

- Preparation of a Supplemental EIS (SEIS) for National Environmental Quality Act (NEPA) is required to receive federal funding, and preparation of a Supplemental EIR (SEIR) for California Environmental Quality Act (CEQA) is required to environmentally clear and receive state funding for the Phase II Project.
- Although state environmental clearances were obtained in 2004 and 2007 for a 16-mile, 6-station project, VTA decided to build the project in phases and, in 2011, environmentally cleared the construction of a 10-mile, 2-station project, now called Phase I.
 The draft federal environmental document that was circulated in 2009 also addressed a 10-mile, 2-station project and a 16-mile,

6-station project. FTA approved the 10-mile, 2-station project in 2010. The remaining 6-mile alignment, including 4-stations did not receive federal environmental clearance. An update for the remaining 6 miles, called Phase II, is necessary under both CEQA and NEPA due to changed background conditions, changed laws and regulations, and minor changes to the project. Therefore, because of these changes, a combined supplemental document (SEIS/SEIR3) will be prepared.

- The combined environmental document will:
- Define the project.
- Identify potential effects of project construction and operation.
- Develop measures to avoid, minimize, or mitigate adverse impacts.
- Disclose project impacts, mitigation, and public comments and responses.

Opportunities for Public Participation and Input

Scoping (Winter 2015)

What it is:

- The first step in an open process for determining the scope of issues to be addressed and for identifying the significant issues related to the proposed project.
- Public scoping period begins on January 30, 2015 and ends on March 2, 2015. VTA will record and include all comments

in the Scoping Report, which will be available to the public following the scoping period.

What VTA will do:

- Develop and present project alternatives and options.
- Conduct public scoping meetings.
- Publicize meetings via mail, email, newspaper advertisements, and media.

Opportunities for Public Participation and Input (continued)

What the public can do:

- Attend public scoping meetings to learn about the project three meetings will be held in February 2015 in the Alum Rock neighborhood, downtown San Jose, and in Santa Clara.
- Provide input on what should be studied in the Draft SEIS/ SEIR3.
- Review and comment on the scope and focus of the environmental analysis via mail, email, or at the scoping meetings.

Draft SEIS/SEIR3 (Spring-Fall 2015)

What VTA will do:

- Prepare technical studies.
- Analyze project impacts and evaluate alternatives and options.
- Draft mitigation measures based on potential impacts and ongoing community input.
- VTA is committed to an ongoing, transparent, community outreach process which includes community update meetings at important project milestones, as well as ongoing outreach to key stakeholder groups in the project region.

What the public can do:

Attend and engage in outreach sessions in spring through fall of 2015 on proposed topics such as economic and community benefits, funding, station planning, transportation connectivity, and construction methods.

Public Review and Comment On Draft SEIS/SEIR3 (Winter-Spring 2016)

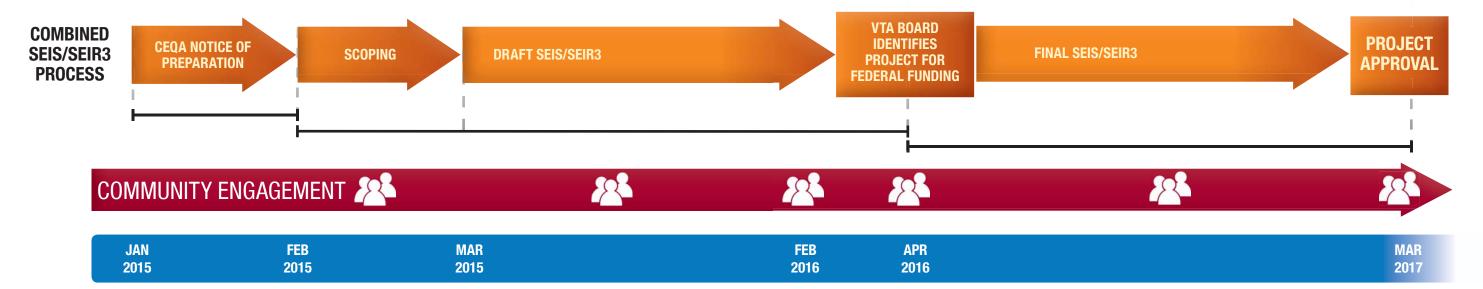

What VTA will do:

- Circulate Draft SEIS/SEIR3.
- Host public hearings to present results of the analysis and receive comments on Draft SEIS/SEIR3.

What the public can do:

- Attend public hearings to provide formal comments about the project as part of the environmental process.
- Review Draft SEIS/SEIR3 during 45 day public review period and provide comments to VTA via mail, email, or at the public hearings.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Advantage A Reporting
Services, LLC

MR. STRUMWASSER: I'm going to ask the first speaker to come up, Harpaul Nahal.

2.5

MR. NAHAL: Good evening. My name is Harpaul Nahal.

My questions are related to any eminent domain or condemnation issues related to this project. I just want to know whether or not there is any specific areas where the VTA has planned to take property and use that for this project. And I want to know where those places would be, if there's a general area or if you guys don't know yet. So that's one of my questions, if there's any condemnation or eminent domain issues involved.

I also want to know if there's going to be added security for these separate BART locations. I know the majority of them will be underground because we have four. But is BART police going to be patrolling these new stations or is that issue going to be raised with the cities or the localities -- the local police department in those areas?

My other question relates to just the overall impact. I know you spoke about the vibration report, and that's going to be forthcoming. But I want to know when initial construction begins. You guys are going to have to dig underground, and I want to know where

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

And that's it. Thanks.

MR. STRUMWASSER: Okay. Thank you very much. The next speaker is Robert Means.

MR. MEANS: Robert Means, 1421 Yellowstone in Milpitas.

And I've got -- I was kind of confused by the fact that there's only two alternatives being considered, no build and this particular proposal. And I was wondering whether there was any room for an alternative plan using alternative technology, such as advanced transit networks. It appears that the \$4.7 billion that is being proposed for this particular technology is going to yield four stations, unless one or more of those is cut. For less than half that price we could get over a hundred stations using the advanced transit network technology. So in terms of service, return on investment, reduction of CO2 emissions, a whole slew of things that the purposes of this project are supposed to address, all of those could be enhanced dramatically by using an alternative technology. So my

basic question is, is there any room in the discussion for an alternate plan?

The second point is that global climate disruption is proceeding rapidly. And we need to move much more quickly than the schedule for this BART extension really allows for. So we really need to move much more quickly.

Thank you.

MR. STRUMWASSER: Thank you very much.

Any other comments out there that you want to put into the record?

Philip Chan.

MR. CHAN: Hi. I understand that San Jose has a fair amount of liquefaction and earth settlement. And my question is, with digging for BART, what is the impact of that and the considerations? And that would be good -- I'd be interested to learn more about how the earth is settling within that area.

Thank you.

MR. STRUMWASSER: Thank you very much.

Other comments?

MR. GONZALEZ-ESTAY: Anybody need a card?

MR. MANCILLAS: Russ Mancillas, local

resident. I just have a concern, if there's been any

25 thought in running a VTA line between the Caltrain

station and the airport and if they would be thinking about something like that at this point since building and process is already going on.

So that's all.

MR. STRUMWASSER: Thank you very much.

Other comments?

MR. GONZALEZ-ESTAY: Anybody else?

MR. FITZWATER: I just want to add that on the VTA web site you can see all of the environmental documents I mentioned. So if you are interested in looking at vibration -- or I know there is a discussion about liquefaction in that document. In those previous documents also. So you can see those. But we will be updating that information because there have been minor changes, and some of that information is several years old. So we will be updating that information, but it is available on the web site.

MR. STRUMWASSER: Well, we want to thank you very much for taking the time out. Again, staff will stay here until 7:30. Anybody with a name tag can help you out.

I want to also remind you that there are multiple ways to submit your comments. We really do want them in by March 2nd. We had verbal comments tonight. You can fill out the comment card and give it

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Services, LLC

to us; you can take it home and mail it in. It's a self-mailer. You can also e-mail at the address up there.

So thank you all very much for coming tonight. We appreciate it. We know you have lots of other things to do, and we appreciate your input and your interest in the project. Thank you.

24

25

For now we're just going to limit speakers to two minutes. It seems like we have plenty of time.

And I just want to remind everybody that all comments will be reported -- recorded.

So I am going to go ahead and call the speakers up to the podium.

Speaker Number 1, Wolfe Roadman.

MR. CEVOROV: Good evening. First of all, let me introduce myself. To you guys familiar with San Jose, I'm actually with the music group Smash Mouth from here.

One thing I really took a look at back there was the downtown station between the two, the western and the eastern. One thing I realized was -- and I talked to one of the staff representatives about was the eastern downtown is more right at the outskirts. And there's actually more area for a station right there, that City Hall. They have, like, places that are opened up and not used.

As part of the western part, supporting light rail and stuff like that from underground, there's

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Services, LLC

going to be lots of closures on light rail in periodic stages, which -- you know, probably have to bus and stuff like that and more of an impact there.

And not to mention also there's one station proposed, called the Fountain Alley station. As you know, right now we're having a huge problem with Fountain Alley. You know what I mean by that. There are some proposed for Fountain Alley.

But, however, I think more being on the eastern edge of the downtown one is more of a bigger option because there's less stuff in that area. It's right across from City Hall. It's more wide open. And it's right there at the outskirts of Fourth Street. Everything begins there, Fourth all the way up to Almaden.

So thank you for your time.

MS. ZAGAZETA: Thank you.

Next speaker, we have Tino Gallo. And the speaker after that will be Larry Ames.

MR. GALLO: Hello. My name is Tino Gallo.

I have a simple question. When the train leaves Didiron station and takes a loop or cuts an elbow, that is going to impact streets in The Alameda. And I just want to know how far that's going to go. Is it going to reach Chipotle or -- you know, how far will

that loop go?

That's my only question. Thank you.

MS. ZAGAZETA: Okay. Thank you.

Larry Ames.

MR. AMES: I just submitted written comments.

I didn't know --

MS. ZAGAZETA: No, that's fine. We appreciate the written comment as well. That's great. Okay.

Scott Knies.

MR. KNIES: It's interesting to be at the beginning of the scoping process. And I'd like to see the scoping have a vision that really kind of goes beyond just what was on that PowerPoint up here. We have the opportunity to really look at the goals and the vision for BART through this process, including the circulation downtown, how it's going to tie into high-speed rail eventually and how the design and planning decisions are going to be made for the project.

There's a lot of detail in the project, from where the stations are going to be located to how the stations are designed to where the vents, where the emergency exits are going to be. All of those details are going to need more attention from the community.

And we'd like to see a downtown working group established that addresses the planning and design details for both the downtown and the Diridon station. Be able to go in greater detail with both the City of San Jose, BART transportation staff and the VTA and BART staff. How these stations are going to be integrated into the community. How they're going to be integrated with the construction. The mitigation of where the stations are going to be dug and where the tunnels are going to be mined and how they're also going to be integrated with the development opportunity sites that are abundant in the downtown and what type of policies we may want to include in the scoping to, again, further the goals and the vision of the BART. Also to make it worthwhile and to have a lot of hands-on with the community as we're nearing transportation -- potential transportation in 2016.

1

21

22

23

24

25

MS. ZAGAZETA: Thank you very much.

The next speaker is Adina.

MS. LEVIN: My name is Adina Levin.

And first of all, I'm glad to see the list of topics for additional community participation. Those were all good topics, and that's going to be really helpful to address those.

And also glad to hear the discussion about

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Services, LLC

6

the EIR, to focus on some things that have changed since some of the earlier variance -- the earlier iterations, when this project was planned.

1

2

3

5

6

7

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And one of the changes that I did not hear mentioned and would like to comment on is that since those early variance, Caltrain electrification has been funded and moving forward. In the earlier variance of the project, when it started to be planned, Caltrain ridership was about a third of what it is now. Electrification wasn't funded and moving forward. so it would be useful to study what the ridership of this project would be if there was an excellent five-minute transfer between Caltrain and BART at Diridon. And also what the ridership would be at Santa Clara if this project, for funding reasons, were phased to end at Diridon and if there were service that an electrified Caltrain could provide, with four trains per hour at Santa Clara. So when this project was in an earlier phase, Caltrain wasn't in a state to be able to provide excellent service to Santa Clara and now can, once electrification happens with this project this year.

So those are the comments, to update the assumptions with electrified Caltrain going to be happening at the same time as this project happens.

Thank you.

2.2

23

24

2.5

MS. ZAGAZETA: Great. Thank you.

The next speaker we have is Gary Cunningham.

MR. CUNNINGHAM: Yeah, I just had a question about connecting the dots, which I think VTA doesn't do very well. I notice you're going to Santa Clara, it looks like -- I don't know what the exact stop is. You're not getting to the San Jose airport. A lot of people are there, you know. You're supposed to take people where they need to go.

Also, at the airport we're putting in a new soccer stadium. Another event, and a lot of people are going to go to that. You're not going to go there.

I go to Portland; I take their light rail to the airport. I go to D.C.; I take the metro to Washington National and soon to Dulles. But for some reason here we don't want to connect our airport to either light rail or BART. And I want a comment on that.

MS. ZAGAZETA: Great. Thank you very much. Are there any other interested individuals in

speaking tonight?

All right. Well, thank you very much. just want some closing -- to say, in closing, just a reminder that there is still ample time to submit

written comments. You have until March 2nd.

We're also having another scoping meeting this Thursday as another chance for you if you want to come and provide some verbal comments. A court reporter will be at that meeting as well, very similar to the structure tonight.

The presentation will be available at VTA's web site. And staff is available to answer any questions you may have, in the back of the room there.

Thank you again for coming.

(Public meeting was concluded at 7:06 p.m.)

MS. ZAGAZETA: All right. Good evening. So
it's about that time, that we get started on the formal
presentation tonight. This is VTA's Silicon Valley
Phase II Extension Project scoping meeting. On behalf
of VTA, I'd like to welcome everybody here tonight. We
all know it's hard to get out here on a Thursday early
evening, so it's great to see pretty much a full house.
VTA really appreciates everybody coming out here and
attending, and we look forward to hearing from you this
evening.

2.5

So VTA did do some pretty extensive noticing. They mailed about 53,000 mailers to residents, business owners and landlords along the project alignment. So, given this extensive effort, we're very interested in seeing how you heard about the meeting tonight. So I'd like to get a show of hands for those people who did receive a mailer invitation in the mail.

Okay. That's quite a bit. Great.

Did you receive an e-mail invitation? Who received an e-mail invitation?

Okay. Couple dozen.

How about -- did you see the invitation on social media?

A show of hands. Great.

Did you get a newspaper ad in the San Jose

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

1	News or Santa Clara Weekly?
2	One back there. Great.
3	UNIDENTIFIED SPEAKER: San Jose State.
4	MS. ZAGAZETA: San Jose State?
5	UNIDENTIFIED SPEAKER: Yeah.
6	MS. ZAGAZETA: Okay.
7	UNIDENTIFIED SPEAKER: I heard about it in
8	one of our classes.
9	MS. ZAGAZETA: Oh, it was announced in a
10	class at San Jose State?
11	UNIDENTIFIED SPEAKER: Yeah.
12	MS. ZAGAZETA: Great. Excellent.
13	Did you hear from your neighborhood
14	association or elected official or a friend?
15	So we got San Jose State. Okay. A few more
16	here. Excellent. Great. Thank you.
17	So, prior to getting started, we'd like to
18	acknowledge that there are some elected officials who
19	are here tonight. We have Santa Clara Supervisor Dave
20	Cortese back there.
21	San Jose City Council member Ash Kalra. Ash.
22	Thank you.
23	Representative for Representative Zoe
24	Lofgrin, Michael Branson.
25	Representative for Representative Nora

Campos, Minh Pham. He's back there. Thank you.

Representative for Santa Clara Supervisor Cindy Chavez, Hope Cahan.

Representative for Senator Jim Beall, Domingo Candelas. Okay.

And we have representative for San Jose Mayor Sam Liccardo, Fred Buzo.

Excellent. All right. Well, we do have VTA staff here tonight that is going to be presenting this information to you of tonight's meeting.

The purpose of tonight's meeting is to provide you with a project overview. It's to provide you with information on the environmental process.

And, most importantly, it is to receive comments from you on the project and the scope of the environmental document.

Our VTA presenter tonight is Leyla Hedayat.

She is VTA's BART Silicon Valley Phase II project

manager. We also have staff Tom Fitzwater, the manager

of environmental programs, and he will be providing you

with an environmental process.

There is a lot of other VTA staff here tonight, and they're wearing the red badges. After the presentation tonight, after you've all had a chance to speak, they will still be available in the back of the

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

room to answer any questions you may have.

2.1

2.2

So what is scoping? Scoping is a 30-day process of determining the focus and scope of an environmental document through public outreach. The start of the scoping process starts with the notice of preparation, and that is submitted to the state clearinghouse. And that is a notice to the public and agencies that a draft environmental report is being prepared, and it starts the initiation of collecting comments.

As I mentioned, the scoping period for this project began on January 30th, and it will end on March 2nd. Three scoping meetings were scheduled. The first meeting was held last Thursday at the City of Santa Clara council chambers. There was a meeting a couple of nights ago on Tuesday night at VTA's customer service center in downtown San Jose. And this is the third and final meeting for the three scoping meetings.

As I mentioned, the intent of the scoping process is to receive comments on the scope of the environmental document. So there are a few ways you can do that. In person, which can be -- which -- verbal comments are accepted during the scoping meetings. So tonight is an opportunity for you to provide comments verbally.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

2.2

If you do not wish to speak tonight and if you just want to write your comment, you can do that. And you can leave it here tonight or you can take it home. There is still ample time to provide comments. You have until March 2nd.

If you do use the blue card, there is an address already on the front of it, and no postage is necessary. If you would like to provide a longer written correspondence, you may do so as well. And you can address it to Tom Fitzwater, to the address in the e-mail listed on the slide.

So I do want to mention that there is a court reporter here tonight, and the court reporter will be recording all comments.

If you wish to speak -- and we really encourage you to do so -- please fill out the blue speaker card and raise your hand, and somebody will walk around and pick that up.

All speakers will be called up in order. So please put your name on the card, and I will call you out by name.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

2.2

2.3

Put your name on the card, and we'll call it out by name.

We also encourage you, if you are not comfortable speaking, you can also write on the top of your card "Please read," and I'd be happy to read that for you.

With that, I'm going to turn the presentation over.

MS. HEDAYAT: Hi. Good evening. Thank you for all coming out tonight. Many familiar faces that we've been seeing over the last couple of months.

My name is Leyla Hedayat. I'm the Phase II
BART project manager for this project. So I'm going to
provide you with a little bit of overview, and then I'm
going to hand it over to Tom that will begin the formal
process.

So what is the environmental project that we're talking about? It's actually a program that has been approved under the state environmental process, what we call CEQA.

And the first phase right now is the Berryessa extension. Many of you may be familiar with that. It is going to be connecting up at the BART Warm

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Springs station. BART is currently constructing that station, and it will be open at the tail end of this year.

2.5

We'll begin at that location. We're constructing right now. And the Berryessa station and the Milpitas stations are two stations along that corridor. It's about ten miles. We're forecasting that to open up in fall of 2017, and we're anticipating about 23,000 riders. So hopefully many of you see the construction activity that is going on right now.

So Phase II. And that's what we're here tonight to discuss. I just want to provide you with an overview and refresh everyone tonight about where we're at. Phase II is a six-mile extension. I'll describe it in a little more detail. It is four stations -- Alum Rock, downtown, Diridon and Santa Clara -- and has a maintenance facility at the end -- at the end of the line. And it's anticipating a 2035 forecast of about 55,000 riders.

So the project purpose: Improve transit service. That's clear. And then, really, improve regional connectivity. We want to sort of ring around the Bay and connect up as best we can and provide connectivity to all different transit modes. We want to increase transit ridership, and we want to support

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

the vitality -- the academic vitality of the county, and we think this project will do that. Improve mobility options and enhance transit service, of course. And then improve air quality. We all know that this project will help do that as well. Of course, support local and regional land use plans.

So we are studying two alternatives in this environmental document. The no-build alternative is considered to be the Berryessa extension project, because that's currently under construction. And by the time we build our project, that will be in place.

The build alternative is a six-mile project that I mentioned that -- the Phase II project. And that's the four-station, six-mile with a maintenance facility. I'll describe that a little more.

So six miles. That's why we're here tonight, to talk about the build alternative. Six-mile extension, four stations. We got the Alum Rock station. That's an underground station. We got the downtown station, which we have two alternatives or options we'll be looking at. And I'll describe that more a little bit later. And then we got a Diridon station, which is going to be underground. And then we have Santa Clara, which is an at-grade station. And the maintenance facility would be located at sort of

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

the border of San Jose and Santa Clara, and that's where all the vehicles will be maintained for the -- for that extension. And, again, as I mentioned before, we're anticipating 55,000 riders.

So I'm just going to describe the alignment a little bit. We get this question asked all the time. Where it is going? Is it going to be underground? You know, what's the alignment?

So if you look at the Berryessa station up on the right, after the Berryessa station we will be dipping down into a tunnel and going over the 101 freeway. And then we have an Alum Rock station, and at that location it's around 28th Street location. It's going to be in a tunnel configuration from that point through downtown. And then to San Jose Diridon station, which is where the Caltrain station is currently. And then it continues in an underground configuration in a tunnel until you get to 880, and after 880 it goes at grade and comes out. And that's where the vehicles will be maintained. And then the Santa Clara station will be at an at-grade facility.

Let me describe the stations in a little more detail. This is the Alum Rock station. Again, to just -- 101 is up at the top of the figure. And then you got 28th Street. And this is where -- again, I

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

mentioned what you'll be doing is you're going to be coming into the station area; you will be entering at street level, and you will be going downstairs to pay and then going down to board the train. So it will be underground. We have multiple entrance locations, and we have a transit traction power substation at this location as well.

2.2

So we've got two options that we're going to evaluate in the environmental document for downtown.

This option is the west option, which we evaluated previously. It's at Market -- falls between Market and approximately Third.

If you look at that big X on the right-hand side, that's what we call a crossover back. So that's where the trains can turn around, and that's used for operations. It's operations. So we're going to have that.

And, again, this is underground. So what you're going to be doing is when you're at the sidewalk level, street level, you're going to be going downstairs, paying for your ticket and then going down to actually board the trains.

And, if you notice, the green symbols are entrance options. And we like to clear and environmentally evaluate multiple options. We may not

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

need all of them, but we like to evaluate them.

2.2

So this the east option. This is a new option that we're going to be evaluating on this document. And this is closer -- if you look down there, beautiful City Hall is on the bottom. And this is really going to be evaluated because we wanted some connectivity to San Jose State and City Hall. We thought that was really important.

And so these stations are very long, but we like to -- again, there are a lot of entrance options, and we think this is a real good station option for connectivity. But we'll be evaluating through the environmental process.

The Diridon station. Again, a tunnel configuration at this location. You would be entering at the street level and going down, paying for your ticket and then boarding the train. We have two entrance options at this location and a bus facility that is going to be integrated. We want as much connectivity at this location as possible.

In the bottom left-hand side, you'll see the Caltrain station. That's the Diridon, the historic Diridon Caltrain station. So there's going to be great connectivity at that location. And then of course at the top, which is sort of configured out where the SAP

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Center is, to orient everyone.

2.1

2.2

2.3

So the Santa Clara station -- and this, again, is at grade. And so what we're going to be evaluating is -- when I say "at grade," we're going to enter it at street level. And then you're going to go down -- and actually -- sorry -- you're going to be entering at street level and also boarding at the platform level at that level. So it's an at-grade configuration.

The blue in the bottom is where our maintenance facility is. It's very large facility, and it's an underlying facility. So that will be at that location.

And if you look on the right, going toward sort of that airport Earthquakes stadium that is being built is opening up. That's down at the bottom.

And then we have two parking option locations for this station. And you will see this on the figures when you walk around. And it says "Parking Development and Public Facility." And our -- our desire and what we would like to do in evaluating this process is to make sure we're clearing enough parking that is necessary for the ridership and the project. But we also want to make sure that we don't preclude development. So if there is good development, transit

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

2.2

know, many of you have heard this -- or many of you may know -- we obviously need to be exploring all sorts of funding. So one of the biggest funding mechanisms for us is the federal funding process. And that's what we're going to be doing. We're not only clearing the environmental -- state environmental process. We're also going to be doing the federal environmental process.

At the top you see the NEPA. NEPA is the federal process. And that's the orange line. And then the middle is the green, which is the new federal funding process. And that's -- if you -- the Berryessa extension that is currently being built, we received \$900 million from the Feds for that project. So we are going to be going back to the Feds and asking for more money for this space.

And the bottom is -- we intend that the next two and a half years, just for the environmental and then continued throughout the project, we're going to be having a lot of community engagement.

So the red box indicates first quarter of 2016. And this is a critical point. The VTA board is

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Services, LLC

So, as I mentioned, community engagement is extremely important to us and also the process. And it's very important that we reach out and we engage the community. We're going to be doing that throughout the whole environmental process.

We're also going to be having a lot of focus outreach sessions. And you may have so many that you might get tired of actually hearing about them.

But we are hoping we can cover a lot of topic areas. The environmental process has so many things we have to evaluate, and people want to know what we're talking about. So we're going to have economic and community benefits funding, station planning, transportation connectivity, walking towards -- we're going to talk about construction method, which is extremely important for everyone to know about, with the complexity of this project being in a tunnel. And we're going to be looking and working with our city partners and community members to figure out what other things we can bring to the community to help inform

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

So I'm going to hand it over to Tom

Fitzwater, and he is going to actually begin the formal report.

MS. ZAGAZETA: I just want to make a quick announcement and acknowledge that representative for Council Member Magdalena Carrasco's office is here, Monica Kutchiner from District 5. Monica. There she is. Thank you.

MS. KUTCHINER: Council member is on her way as well.

MS. ZAGAZETA: Excellent. Thank you.

MR. FITZWATER: The environmental process has been going on for a number of years. And I see some familiar faces that were involved in this project dating back to early 2001, when we had similar scoping meetings for the environmental document that was eventually approved by our VTA board of directors in 2004. So they did approve an EIR, environmental impact report, at that time that addressed a 16-mile extension and a six-station project.

After 2004, design proceeded on that alignment and the station concepts. And so there were some refinements to that early document that were addressed in 2007, where we prepared a supplemental

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

environmental impact report. At that time that also -that document also addressed a 16-mile, six-station
project, and that was approved by our board.

2.

2.0

That, essentially, cleared the state environmental requirements, but we hadn't addressed the Federal Transit Administration requirements for environmental clearance so we could secure federal dollars. So in 2010 the Federal Transit Administration actually issued a record decision on a project which was a ten-mile project that is now under construction today, and that's how we were able to secure \$900 million to build that project, because we needed National Environmental Policy Act clearance.

After that was done, we needed to go back and revisit the state environmental clearance because we previously approved a 16-mile project. And we had to -- we're actually going to have federal dollars because we're approving a ten-mile extension. So that's when the second supplemental EIR was prepared, and that made the document consistent with what the federal agency approved.

So today we're at the point where we're looking at an extension beyond that ten miles, and so we're preparing a joint document which would both satisfy federal -- state and federal environmental

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

clearance requirements.

In terms of why we're preparing an additional document, there have been minor changes in the projects -- in the project. Not so much with the alignment. The alignment has been consistent. But the station site concepts have changed a little bit. Some of the substation facilities have been modified. So we need to address those in the document that we're talking about tonight.

There certainly has been a lot of changes in land use along the alignment, and certainly the cities have adopted general plans that address higher density of development around some of the stations. So we want to address that issue in the document.

There have been changes in laws and regulations -- some state laws, some federal laws -- that we need to address in the document to be consistent and to secure clearance.

And, finally, the Federal Transit

Administration has provided some more flexibility in terms of joint development of some our station sites. So that flexibility allows us some additional options at the station locations.

The scoping meeting tonight is mainly to describe the project, as Leyla has done; talk about the

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

environmental process. This certainly is early on in the process of environmental clearance. This is really the very start of it. It's sort of a long, arduous process to secure state or federal clearance. But you're basically at the very beginning tonight. The scoping process does not result in a decision or selection of alternatives. It's just a process of gathering information.

The environmental document will focus in on addressing the environmental impacts that will occur if the project was to go forward. And where we have environmental impacts that are significant, that's when we look at mitigation measures. So there are a number of mitigation measures that we're incorporating already in our ten-mile extension. And some of those mitigation measures and additional measures will be included in the environmental document that we're addressing tonight.

It also involves public input and comments, and state and federal agencies do get involved in commenting on the environmental document also. And it will provide the decision-makers with one more tool to use in their decision-making process.

So, as I said, we're in the very beginning of this process. We're in the early consultation/scoping

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

time period right now. We will be preparing a draft environmental document that is going to take about a year to prepare. That draft environmental document will be going out for public circulation for 45 days. And each of you can look at that document, write comments to us. We'll be using the comments -- and we'll have similar public hearings to what we have tonight, to allow you to verbalize your comments or submit comments in writing. And that information then will be presented to the VTA board of directors to define a project.

2.

2.2

2.5

And once a project is defined, we will then prepare what's called a final environmental impact report and statement. And that final will document all of your comments and our responses to those comments. And that's another piece of information that the VTA board of directors can use to make a decision on the project. At that time we will need to certify the environmental impact report as being adequate.

We still need federal environmental clearance. And so the Federal Transit Administration will issue what's called a record of decision, and that will get published in the Federal Register.

The environmental document will address a number of comments. It will address a number of

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

topics. And those topics are shown in this PowerPoint slide.

2.2

2.3

2.5

Certainly over the years the major concerns that we've heard have addressed noise and vibration and traffic impacts during operations. And so those have been addressed over the years, but we're actually going to update that information.

We'll also be providing visual simulations for the stations and some of the entrances downtown so you can get an idea of what these facilities will look like in the future.

In terms of construction impacts, we certainly heard from the community and a number of people that they're very concerned about the construction disruption during the building of the stations, certainly the above-ground stations and definitely the underground stations that would be downtown. So that will also be addressed in the environmental document.

Leyla went over the schedule, and here is, again, the timeline. And we are at the very beginning of the scoping period right here. And, as I said, the draft environmental document will take about a year to prepare. And then that will be given -- that will be provided to you to review and provide comments.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

We will define the project. Our board of directors will have an opportunity to define a project that will then be addressed in the final environmental impact report. And we do have to go to the VTA board of directors to secure approval of the project and to certify the environmental document.

2.

2.2

2.3

And, as I said before, the end of the environmental clearance process is a record decision that the Federal Transit Administration issues.

So, with that, I'll turn it back to Audrey.

MS. ZAGAZETA: Great. Thank you.

Okay. Well, that concludes the presentation on the project overview environmental process. So we're now going to open up the floor to receive public comments.

I have about eight speaker cards. A couple of them, folks have requested that I read them out loud. And I would be happy to do that.

Are there any other cards, people who are interested in submitting? You have plenty of time to submit your cards. You can submit it at any time while people are giving their comments.

I just want to remind the commenters that there is a court reporter here that will record all of the comments.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

I just want to say, again, that the purpose of tonight's meeting is to hear from you. So we're very interested in hearing what you have to say. So this is an opportunity to do so.

Also to let you know that the presentation tonight will be posted on VTA's web site and that staff is available afterward to answer any questions that you may have. Thank you.

So, with that, I'll call up the first three speakers. Our first speaker is Danny Garza, followed by Rob Means. And then I'm actually going to read the third speaker's card out loud.

So go ahead and speak into the mic when you're ready.

MR. GARZA: Okay. My name is Danny Garza.

I'm director-at-large for the Plata Arroyo Neighborhood

Association; chapter chair for MAPA, Mexican American

Political Association; board member for the La Raza

Roundtable.

I have three issues, and you've heard them $% \left\{ 1\right\} =\left\{ 1\right\}$

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

all before. My first issue, first and foremost, is student safety at every -- student safety at every crosswalk that BART is going to impact on Julian and Santa Clara. We want to make sure -- and I thank BART for saying that they're -- they mentioned it. But they need to come back to the community and let us know what their plans are for our student safety. When someone is late for work and leaves the BART parking lot, we don't want them running a red light and killing one of our kids.

2.1

2.2

The second thing is Five Wounds Church.

Again, we want the church insured. We do not care about the work. We want Five Wounds Church insured. I don't care if you do it or if the general contractor does it. Because if that church comes down, it will never be replaced. Construction vibration from trucks and equipment will vibrate that church. If you notice, the towers have already been reinforced from Loma Prieta. I want targets -- I want laser targets on the towers, not the base of that church. Because the base isn't going anywhere. The towers are.

And the third thing is security in our neighborhoods. We want -- as long as that station is open, we want personnel in that station. We don't want cameras. Cameras don't stop anybody. We know that.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

BART is already dangerous. People have gotten killed by their own officers. So we need for BART, the sheriffs and the police to let the community know who, what and how they're going to respond to our issues.

Thank you.

MS. ZAGAZETA: All right. Thank you. Thank you. Your two minutes is up.

Okay. Rob.

MR. MEANS: Hi. Excuse me. I'm Rob Means from Milpitas. I got a couple of things to talk about.

One is the return on investment that this \$4.7 billion project is supposed to return.

2.2

And the second thing is that we have an extreme crisis coming up with global warming, global climate crisis happening. So, to me, of all the environmental issues that we should be addressing, we should be looking at reducing our CO2 emissions.

Your estimate of 55,000 people being able to use this is a good step in the right direction. But I suspect that if we had, say, 100 stations instead of just four stations, that we would probably be able to double, at least, that number of users, meaning that's -- we could double the number of people not driving and, therefore, halve the number of CO2 emissions.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Now, in terms of the return on investment, that 4.7 billion that we're estimating this is going to cost -- first off, it seems to be very difficult to get that money together. And I know that there is some speculation about doing another sales tax that, as we know, hurts the poor more than it hurts the wealthier.

2.2

2.3

But I'm suggesting that we use an alternative technology that is much less expensive. And, therefore, instead of just getting four stations, we could get one hundred stations, and we could do it for half the price. So I'm urging you to consider the advanced transit technology -- Pod Cars, as they've been called -- the technology that has been examined for use at the airport to connect between the terminals there and the LRT on First Street and the Caltrain station on the other side of the airport.

So please take those into consideration as my top two priorities.

MS. ZAGAZETA: Okay. Thank you very much.

I'd like to announce that -- could we just hold all the applauding, just -- we really appreciate the enthusiasm tonight. Just out of respect for each other and for the speakers, if we can just keep that to ourselves. I'd like to announce that San Jose Council Member Magdalena Carrasco is here from District 5.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Okay. So, for the third card, I'm going to go ahead and read this out loud.

"Please keep 28th Street/Alum Rock. What about private funding -- selling name of station?

Prefer western option downtown but add an exit to Third Street."

That was for the record.

Okay. Our next speaker is Rick.

MR. UMSTATTD: Hi. My name is Rick Umstattd.

And I moved into this area in 1976. And I lived up

across from the golf course, basically, on Alum Rock

Avenue. And I attended James Lick High School.

And I remember, growing up, just how frustrating it was to get anywhere outside of the immediate area where I lived. My friends and I would ride bikes to Eastridge. We would go to the Trade Zone area, even. But we could not get, like, to Oakland and San Francisco easily. I never went there.

And I just -- I feel really strongly that the 28th Street station is going to have a really big impact on this neighborhood. And especially the people that are growing up, the people that aren't here to speak. I was here when I was that age, and I was frustrated that we couldn't get to BART. My mom would put us all in a station wagon maybe once a year and

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

drive us to the Fremont station. And I thought it was -- I thought it was stupid that we didn't have BART a long time ago.

2.

And I want to thank everyone for everything they're doing to make it happen. Thank you.

MS. ZAGAZETA: Great. Thank you.

I'll go ahead and read the next comment card.

"Will you have BART police officers at stations? Chief concern is security." A second concern is litter and trash. "Maintenance problems already" exist. Secur- -- please put "budget aside for security and maintenance."

Okay. Our next speaker is Davide Vieira, followed by R.E. Van Cleef.

MR. VIEIRA: Good evening. My name is Davide Vieira. I've lived in the area 44 years on the same block, just south of Five Wounds Church. And I share the Five Wounds Village Task Force that created -- helped to create the four village plans that are now part of the City of San Jose general plan for our area.

The EIR should consider distributing VTA/BART parking across the 13-acre site of the Alum Rock station and 28th Street. The EIR should consider VTA public/private joint development, instruct the Five Wounds Village and incorporate shared parking for

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

VTA/BART patrons and those that live, work and visit the Village.

The EIR should consider shared parking as a way to stage VTA/BART parking needs. That is, instead of constructing one parking structure accommodating 1200 vehicles, parking should be added and could be added flexibly until the site is built out.

Thank you.

2.1

MS. ZAGAZETA: Thank you.

MR. VAN CLEEF: I'm Bob Van Cleef. I live right down the street here on -- off of 33rd Street. I've been involved in this process since 2001.

One of the things I'm interested in making sure it gets analyzed is the differential between the tunnel under the freeway and going across the train bridge at surface. It's supposedly not in the plan, but it keeps getting brought up. I want to make sure that when they do that comparison, they look at all the costs involved in that issue, such as adding the second track, such as adding pedestrian crossing to ensure that we still have our trail that is supposed to be going across there, looking at the financial impacts on the adjacent properties and the inability to develop those properties once that train goes through. So I'd like to see a good cost comparison between the train

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Services, LLC

track and the tunnel.

2.5

MS. ZAGAZETA: Thank you.

The next speaker is Akos, followed by David Dickey.

And I just also want to remind you that all of your comments are being recorded and will be included in the scoping report and that VTA staff is here to answer any questions you may have after the presentation.

MR. SZOBOSZLAY: The efficiency of taking BART. The travel time needs to be minimized. And, therefore, I urge that the -- the route between the various stations and the downtown station be reduced in length, because that -- that would reduce the travel time for most people who would take BART.

The second point I would like to make is that I live 1.3 miles from the Santa Clara train station, but I would probably not take BART for these reasons. It would be faster for me just to stay on the 522 bus if I want to go to downtown. If I wanted to go to either Milpitas or Fremont or north of there, I would go north of the airport. I would not want to go to downtown San Jose. It's in the wrong direction. Especially east side San Jose. It's really in the wrong direction. I would go north. So I don't see a

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Services, LLC

reason for the extension to Santa Clara.

Thank you.

2.2

MS. ZAGAZETA: Thank you.

David Dickey.

MR. DICKEY: My name is David Dickey. I live on 21st Street, about a mile from the proposed BART at 28th Street. And I have a few questions related to BART and 28th.

Currently the station at 28th is underground. And, essentially, it's a parking lot. There is access to the station underground. And I would like to find out: How does one actually get underground? There are access points. But assuming there are going to be stairs or elevators, escalators, that sort of thing. What's the actual interface to the parking lot? There's going to be a building of some sort -- but to protect those access points from the weather.

What constraints and prescriptions on future development will those buildings have, since the -- currently we're talking about just a bare parking lot on the site, which we have a village plan, which is much more elaborate. Without having -- without building both concurrently, then you need to build -- you need to design things so that you don't limit future construction.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

And, also, what will VTA be doing to enhance the development of this site during and after the underground construction is complete?

MS. ZAGAZETA: Thank you so much.

Bill Rankin, followed by Charisse.

MR. RANKIN: Hi. I'm Bill Rankin. I'm a trail advocate. And I would like to ask that the EIR consider devoting the abandoned railroad bridge over 101, north of the Five Wounds Village, for use for pedestrians and bicycles.

Thank you.

MS. ZAGAZETA: Thank you.

Charisse. And can I have Chris go ahead and come up after her so we get you lined up there.

MS. LEBRON: Good evening. My name is
Charisse Ma Lebron, director of community development
and health policy with Working Partnerships USA. We're
a community organization that employs resource and
policy advocacy to advance campaigns for echo growth
health community and quality jobs. We also convene the
Transportation Justice Alliance, which represents the
community of transit advocacy and housing folks as well
as Neighborhood Association for Equitable Growth.

In terms of the BART Phase II EIR process, as it unfolds, we would like to see the following

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

questions and issues addressed.

7

3

4

5

6

7

9

10

11

12

13

14

15

16

17

2.0

21

22

23

24

2.5

First, as VTA conducts its ridership studies of the four stations, we would like to see the methodology and the assumptions considered and clearly articulated. This will allow residents to understand the analysis and work to ensure both our community is informed.

Second, we would like to see an analysis of the associate economic impact to the community of BART if 28th is not built as well as the analysis and mitigation measures that will be considered to prevent displacement of community members once it is built.

Lastly, we would like to see performance measures for station alternatives considered; specifically, how each alternative brings VTA closer to meeting its VMT and GHT reduction roles. We would like to continue an ongoing and constructive dialogue of VTA as you move forward to reach an alternative that is preferred by the community. We, of course, share your concerns about the sustainability, increased ridership and reduced environmental impact. But also let's address the goal of transportation equity.

MS. ZAGAZETA: Thank you. Your questions have been recorded, and they will appear in the scoping report as well. Thank you very much.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Chris. State your name for the record, please.

2.

2.2

MR. LEPE: Yes, Chris Lepe with Transform.

Transform is a nonprofit organization here in the Bay

Area that works on creating walkable communities and

greater transportation options.

And so we have a few different questions in regards to the BART extension. One is that -- you know, the cost has doubled for the project, and the sales tax revenues have generated about half of what was projected. So, obviously, that creates some constraints.

So in terms of looking at costs and also performance of the project, we would like to see what the -- essentially, the agency is already looking at doing, which are looking at alternatives but spelling out what the performance of those different alternatives will be and what the cost will be, both from a capital cost as well as an operation and maintenance cost as well, looking at ridership data and so forth.

Also, in regards to impacts, it was mentioned already that there should be an environmental justice analysis considering what happens if the Alum Rock station were to be eliminated -- which we don't

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

support, but -- and also what happens, if the station were to be constructed for a socioeconomic situation in the community, considering displacement and justification.

And, finally, separate but sort of related is the question of funding. And that's really a question of whether sales tax revenue should primarily fund this project, along with the federal funds coming in, or whether other revenue sources might be considered, such as Hotlink revenue such as cap and pay revenue, such as value capture around the station, which is something that the City of San Jose can do at this point.

So thank you.

2.5

MS. ZAGAZETA: Great. Thank you.

We have one other speaker, Ernesto Perez.

MR. PEREZ: Hi. My name is Ernesto Perez.

I'm people active in the community together.

And it's -- one of the options in public service for the people to use is provide better service. Because I want to leave my car at my house. I prefer to use the public service. But right now it's not attractive. So hopefully the business become a refuge. We need to refurbish the buses. Because right now it's not attractive at all for left the car at the house. Because I live in East San Jose by Tully Road.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

And car take me 15 minutes to Montague and San Tomas

Expressway. And for the bus take me two hours or two

and a half. So no one takes the bus in this distance.

So if this become -- be smart to develop the roads

attractive to the people leave the car. Because that's

what we need, in reality, to transport the people.

Thank you.

MS. ZAGAZETA: Thank you.

Okay. Do we have any other speaker cards? We have one more.

Okay. Virginia, please.

MS. SOUSA: Thank you. Good evening, everybody. My name is Virginia Sousa, and thank you all for coming.

I am Portuguese-American. I come from two cultures. I was born here in Oakland, California. I'm Portuguese and American.

But I just want to say that with the elimination of one BART station, if there's talk of the possibility, I want to make sure that we get a BART station for the Five Wounds Church. The reason is because we have a lot of Portuguese in this area. And I believe that someday that BART will be going into possibly Tracy in the Valley, which has a lot of Portuguese over there.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

And, of course, we have philharmonic orchestras -- I think three of them here in the San Jose area. We have one in Newark, California. We got one in San Leandro, I believe. We got tons of them in the Valley.

2.0

2.2

So, with that, it would make it easy for all of us that are Portuguese-American to appreciate our culture by coming down to the Five Wounds, which is the national Portuguese church for the Portuguese here in the United States. It's a beautiful church.

And I myself, I live in Union City. My mom lives here, Virginia M. Sousa. And I live with my sister. And when we get older -- of course, the freeways are dangerous today. I don't want to get onto a freeway later in life, wanting to come down to see the Five Wounds Church, attend mass or go to Little Portugal to have a Portuguese dish or see our culture. I would rather come hop on Union City transit to go to a BART station in Union City and come on down on BART to the Five Wounds and go over to Little Portugal, attend mass at Five Wounds, go to the Holy Spirit Festival during the summer months.

So I think that it would help a lot for our culture. I know in San Francisco they've got Chinatown. Also in Oakland. They've got North Point

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Services, LLC

-- North Beach for the Italians. We Portuguese don't have anything around here. So that would help us a lot, to build up Little Portugal.

And also we have other people -- besides being Portuguese, we have Brazilians. We have people from the African colonies, Macau, the Orient, India. So they also would appreciate to have a place to come down to, Little Portugal, make it easier for them to come and enjoy some of the Portuguese culture.

And that's all I have to say. And thank you very much.

MS. ZAGAZETA: Thank you.

Do we have any other blue comment cards? Are there any other comment cards that you would like me to read?

Thank you. Okay. Joel.

MR. CAMPOS: Hi. My name is Joel Campos, and I just have one question. I would like to know how BART coming to Alum Rock would impact low-income people, especially the low-income renters in this area. Because I know when BART comes in, everything is going to get a lot more expensive. And so please take the low-income renters in this area into consideration and figure out how you're going to mitigate them having to move away because of BART.

REPORTER'S TRANSCRIPT OF PUBLIC COMMENTS

Thank you.

MS. ZAGAZETA: Thank you.

Okay. All right. Well, this concludes the presentation portion. Thank you very much for coming. We really appreciate seeing so many people come out here tonight and give your comments. The presentation will be up on VTA's web site, and staff will be available to answer any questions you may have.

Thank you very much. Have a good night.

(Public meeting was concluded at 7:20 p.m.)

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGION IX

75 Hawthorne Street San Francisco, CA 94105

MAR 0 9 2015

Raymond Sukys U.S. Department of Transportation Federal Transit Administration, Region IX 201 Mission Street, Suite 1650 San Francisco, CA 94105

Subject:

Scoping Comments for the Proposed 3rd Draft Supplemental Environmental Impact Report/Supplemental Environmental Impact Statement for VTA's BART

Silicon Valley - Phase II Extension Project

Dear Mr. Sukys:

The United States Environmental Protection Agency (EPA) has reviewed the Notice of Preparation (NOP) published January 30, 2015, requesting comments on the scope and content of a Supplemental Environmental Impact Report (SEIR) to be prepared by the Santa Clara Valley Transportation Authority (VTA) for the proposed Phase II of the BART Silicon Valley extension. We understand that an SEIS will be also prepared pursuant to NEPA in conjunction with the SEIR. Please consider the attached scoping comments when the combined EIR/EIS is being prepared. EPA provides these comments pursuant to the National Environmental Policy Act (NEPA), Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500-1508) and Section 309 of the Clean Air Act.

EPA appreciates FTA and VTA efforts to address past comments provided by EPA through our past review and comment on previous versions of draft environmental documents, and we appreciate the continued opportunity to provide scoping comments on multimodal aspects of this important Bay Area transit project. We look forward to reviewing the Draft Supplemental EIS and environmental analysis that follows.

If you have any questions, please feel free to contact Zac Appleton, the lead EPA reviewer for this project. Zac can be reached at <u>Appleton.Zac@epa.gov</u> or (415) 972-3321.

Sincerely,

Zac Appleton, NEPA Reviewer Environmental Review Section

Enclosures:

cc:

EPA's Scoping Comments Thomas Fitzwater, VTA David Valenstein, FRA Mark McLoughlin, CA HSR EPA SCOPING COMMENTS FOR THE BART SILICON VALLEY PHASE II SUPPLEMENTAL DRAFT ENVIRONMENTAL IMPACT STATEMENT, MARCH 9, 2015

In addition to the Probable Effects relating to air quality, biological resources and wetlands, water resources, community resources, transportation, and other matters, that FTA and VTA are already committing to discuss, EPA offers the following scoping comments for added focus in the supplemental document.

Environmental Justice

EPA provided comments on the first Draft Environmental Impact Statement (DEIS) for this project in a May 21, 2004 letter. EPA then reviewed the revised March 2009 DEIS and provided comments on April 27, 2009. We rated the revised DEIS as Environmental Concerns — Insufficient Information (EC-2). In our comments on the original and revised DEISs, we expressed concerns that low-income and/or minority communities could be impacted by changes in other transit services due to redirection of funding from local bus services to the BART extension. Our review of the Final Environmental Impact Statement (FEIS) in March 2010 found all of our concerns addressed. EPA notes that the new Supplemental document can capture these past commitments.

Recommendation:

EPA recommends that VTA repeat its commitment in this third Supplemental document, to maintain service levels on other transportation modes when this project becomes operational and to improve BART-to-bus connections in the corridor, focusing services in areas where ridership potential is highest, including low-income communities.

Intermodal Connections

The project proposes to extend the loop of the Bay Area Rapid Transit system from a terminus just south of the Berryessa Station, through San Jose, and continuing northward to Santa Clara. The project will include four stations, Alum Rock, Downtown San Jose, Diridon, and Santa Clara. The proposed Santa Clara BART Station would terminate at grade near the existing Santa Clara Caltrain station, including a "kiss-and-ride" facility, and a maintenance yard. The supplemental document would be an opportunity to discuss how the proposed BART extension will interface with both existing transit systems, like VTA's light rail and Caltrain, as well as future planned transit systems, like the El Camino Real Bus Rapid Transit (BRT) Project which may terminate near the proposed Santa Clara Station, the Santa Clara-Alum Rock BRT Project, and the California High Speed Rail (HSR) which may include a stop at Diridon Station in San Jose.

Recommendations:

EPA recommends that the Supplemental DEIS discuss the intermodal interface of the proposed BART project with the other transit systems in the area, including light rail, bus-rapid transit, commuter rail, and where possible, the California High Speed Rail. The discussion should include features that encourage an improved passenger experience, including intermodal connection distances by foot or wheelchair, wayfinding and timetable signage, and integrated ticketing. The Supplemental DEIS should include additional information on how increased ridership will affect train and station capacity, and how these impacts will be addressed by VTA and BART.

EPA recommends that FTA and VTA highlight the ongoing coordination between FTA, VTA, FRA, and California HSRA to improve the rider experience around these system connections.

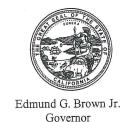

Station Prioritization and Design

EPA is encouraged that VTA and FTA are planning to submit a Supplemental DEIS that includes all four stations originally considered. EPA is aware of public concerns regarding how many stations are fiscally constrained, and EPA encourages VTA and FTA to use the Supplemental DEIS as a means of analyzing the beneficial and adverse impacts related to the number of stations proposed. If funding limitations would result in prioritizing some stations first, there may be impacts to ridership, and therefore to ancillary factors like station design, vehicle parking facilities, and other factors that the Supplemental DEIS could present and analyze.

Recommendation:

EPA recommends that FTA and VTA discuss station prioritization among the four considered in the project if funding limitations would result in limiting or prioritizing station construction. Where ridership may be affected, discuss what modifications to station design will be considered.

Project Title BART Silicon Valley-Phase 1 Berryessa Extension (formerly Silicon Valley Rapid Transit Corridor)

Lead Agency Santa Clara Valley Transportation Authority

Type NOP Notice of Preparation

Description VTA's Bay Area Rapid Transit (BART) Silicon Valley - Phase II Extension Project (Phase II Project)

would be constructed in Santa Clara County. The 6-mile-long Phase II Project would begin at the terminus of the BART Silicon Valley - Phase I Berryessa Extension Project (Phase I Project) (currently under construction and scheduled to be operational in late 2017) south of Mabury Road in the City of San Jose. The Phase II Project would be at grade where it connects to the Phase I Project and then descend into approximately 5-mile-long subway tunnels that continue through downtown San Jose and terminate at grade in the City of Santa Clara near the Santa Clara Caltrain Station (See Figure 1). Four stations are proposed, three in San Jose, the Alum rock, Downtown San Jose, and Diridon Stations, and one in Santa Clara, the Santa Clara Station. Parking structures are proposed at the Alum Rock and Santa Clara Stations; "kiss-and-ride" (passenger drop-off) facilities are proposed at Alum Rock, Diridon, and Santa Clara Stations. The station facilities would include electrical ventilation systems as well as communication equipment. A Maintenance yard is proposed near the Santa Clara

Mr. Thomas W. Fitzwater Santa Clara Valley Transportation Authority 3331 North First Street San Jose, CA 95134-1927

RE: Notice of Preparation - Third Supplemental Environmental Impact Report for the Bay Area Rapid Transit (BART) Silicon Valley Phase II Extension

Dear Mr. Fitzwater,

The California Transportation Commission (Commission), as a Responsible Agency, received the Notice of Preparation that a Third Draft Supplemental Environmental Impact Report will be prepared by the Santa Clara Valley Transportation Authority for the BART Silicon Valley Phase II Extension (project) in Santa Clara County. The commission has no comments with respect to the project's purpose and need, the alternatives to be studied, the impacts to be evaluated, and the evaluation methods used. As the project is programmed in the State Transportation Improvement Program (STIP) and actions under the purview of the Commission are anticipated, notification should be provided to the Commission as a Responsible Agency. Consideration of the environmental impacts of a project are required prior to the commission's allocation of funds for design, right of way or construction activities as well as for new public road connections and route adoptions.

If you have any questions, please contact Teresa Favila at (916) 653-2064.

Sincerely,

WILL KEMPTON

Executive Director

Re: SCH 2015022011 VTA's BART Silicon Valley – Phase II Extension Project

Dear Mr. Fitzwater:

The California Public Utilities Commission (Commission) has jurisdiction over the safety of rail transit systems in California. The California Public Utilities Code requires Commission approval for the construction or alteration of crossings and grants the Commission exclusive power on the design, alteration, and closure of crossings. The Commission's Rail Transit Safety Branch and Rail Crossings and Engineering Branch are in receipt of the Notice of Preparation (NOP) for the proposed BART Silicon Valley – Phase II Extension Project. The Santa Clara Valley Transportation Authority (VTA) is the lead agency.

According to the NOP, VTA proposes to extend BART Silicon Valley from Mabury Road in the City of San Jose to the Santa Clara Caltrain Station in the City of Santa Clara. Phase I consisted of extending the Bay Area Rapid Transit (BART) tracks from the existing Fremont station to a terminus near Mabury Road. Phase II is a further extension to the Santa Clara Caltrain station.

All construction located near the rail track within the project site must comply with the Commission's General Orders (GOs). Details on the Commission's General Orders are located here http://www.cpuc.ca.gov/crossings. These General Orders consist of:

- GO 26-D: Clearances on railroads and street railroads as to side and overhead structures, parallel tracks and crossings
- GO 72-B: Construction & Maintenance Standard types of pavement construction at railroad grade crossings
- GO 88-B: Alterations of railroad crossings
- GO 95: Rules for Overhead Electric Line Construction
- GO 118: Construction, reconstruction and maintenance of walkways and control, of vegetation adjacent to railroad tracks
- GO 143-B: Design, construction and operation of light rail transit systems
- GO 164-D: Regulations governing state safety oversight of rail fixed guideway systems

The following crossings may be impacted by the project:

- Santa Clara Station Pedestrian Underpass, CPUC No. 105E-44.50-BD, Federal DOT No. 922715T
- State Route 880 Overpass, CPUC No. 105E-45.30-A, Federal DOT No. 755080G
- Hedding Street Overpass, CPUC No. 105E-45.60-A, Federal DOT No. 755081N

West Taylor Street Underpass, CPUC No. 105E-45.90-B, Federal DOT No. 755083C

Commission authorization is required prior to modifying an existing highway-rail crossing. The Santa Clara Caltrain Station Pedestrian Underpass extension will require Commission authorization via the GO 88-B process. VTA has already initiated the process and the stakeholders attended a diagnostic meeting on June 24, 2014. Additionally, the State Route 880 Overpass, Hedding Street Overpass, and the West Taylor Street Overpass highway-rail crossings potentially require Commission Authorization for modification of the existing highway-rail crossings depending on the design and location of the proposed BART tracks.

There appears to be two locations where the proposed BART tracks cross existing freight railroad tracks. The two locations are within the Diridon station and immediately north of West Taylor Street in the City of San Jose. Any new crossings consisting of BART tracks over/under railroad tracks may require Commission authorization via the Commission's formal application process. The designs of these crossings will determine whether or not Commission authorization is required to construct the new crossings. For example, BART tracks in sealed tunnels beneath the existing railroad tracks do not require Commission authorization to construct. However, BART tracks on aerial structures over existing railroad tracks will require Commission authorization.

Finally, a System Safety Certification Plan is required by the Commission's Rail Transit Safety Branch.

If you have any questions, please contact myself at 415-703-3722 or by email at felix.ko@cpuc.ca.gov.

Sincerely,

Felix Ko, P.E.

March 4, 2015

FILE # SCLGEN120 SCH# 2015022011

Mr. Thomas W. Fitzwater Manager, Environmental Programs and Resources Management 3331 North 1st Street, Building B-2 Santa Clara Valley Transportation Authority San Jose, CA 95134

Dear Mr. Fitzwater:

Notice of Preparation of a 3rd Draft Supplemental Environmental Impact Report for VTA's BART Silicon Valley – Phase II Extension Project

Thank you for including the California Department of Transportation (Caltrans) in the review process for the project referenced above. We have reviewed the Notice of Preparation (NOP) and have the following comments to offer.

System & Regional Planning

The proposed Diridon Station and Santa Clara Station should be designed to facilitate convenient transfers to other transportation modes, such as Caltrain or San Jose International Airport. Station design should adequately accommodate pedestrian and bicycle access by orientating station access to major pedestrian and bicycle paths (existing and future). For example, the future Alum Rock Station should consider bicyclists and pedestrians coming from the east side of US 101 along McKee Road and E. Santa Clara Street / Alum Rock Avenue. To the west, station design should consider future connectivity to the planned Coyote Creek Trail in VTA's Countywide Bicycle Plan.

Forecasting

VTA should use the Caltran's Guide for the Preparation of Traffic Impact Studies for analyzing impacts to the State Highway System (SHS). An updated traffic forecast should be provided for

Mr. Fitzwater, Santa Clara Valley Transportation Authority March 4, 2015 Page 2

the environmental document including Park-and-Ride (PNR) and Kiss-and-Ride (KNR) trips by station for all proposed new BART stations.

Highway Operations

A traffic study should be conducted for ingress and egress routes for PNR and KNR trips to identify traffic impacts and mitigations. PNR trips are expected to be higher for the Alum Rock Station and the Santa Clara Station where parking structures are proposed. Since US-101/Alum Rock and US-101/McKee interchanges are expected to serve as major access routes to the Alum Rock Station; and similarly I-880/Coleman, I-880/The Alameda, and US-101/De La Cruz interchanges will serve as key access routes to the Santa Clara Station; these facilities should be included in traffic study scope. For the State Highway System, the traffic analysis should include freeway mainlines, on and off-ramps, ramp termini intersections with local streets, and signalized intersections for El Camino Real.

Signal Operations

The environmental document should have a complete signal analysis at all signalized intersections affecting State Highway System. Signal analysis should include existing, existing plus project, and existing plus project plus cumulative conditions, queue lengths for all movements, and turning movements.

Project Construction Activities

The BART Extension Phase II alignment crosses the State Highway System (SHS) at three locations. Construction activities requiring any partial/full freeway closures, or shoulder closures, regardless of time of the day, should be identified and analyzed for construction traffic impacts. Such impacts should be identified in the Supplemental Draft EIR/EIS and mitigated in the Traffic Management Plan (TMP) with detour plans, permitted lane closure hours, enhanced enforcement, public outreach, etc. Construction truck traffic should also be analyzed in the SDEIR if any part of SHS is used as major hauling route for BART construction truck traffic.

Encroachment Permit

Please be advised that any work or traffic control that encroaches onto the State ROW requires an encroachment permit that is issued by Caltrans. To apply, a completed encroachment permit application, environmental documentation, and five (5) sets of plans clearly indicating State ROW must be submitted to the following address: David Salladay, District Office Chief, Office of Permits, California Department of Transportation, District 4, P.O. Box 23660, Oakland, CA 94623-0660. Traffic-related mitigation measures should be incorporated into the construction plans prior to the encroachment permit process. See the website linked below for more information: http://www.dot.ca.gov/hq/traffops/developserv/permits.

Mr. Fitzwater, Santa Clara Valley Transportation Authority March 4, 2015 Page 3

Re:

BART District Scoping Comments on the Notice of Preparation of a 3rd
Supplemental Environmental Impact Report for VTA's BART Silicon Valley –
Phase II Extension Project

Dear Mr. Fitzwater:

The San Francisco Bay Area Rapid Transit District (BART) has reviewed the Notice of Preparation for a 3rd Supplemental Environmental Impact Report (3SEIR) for VTA's BART Silicon Valley – Phase II Extension Project. We are submitting the following comments for your consideration in proceeding with preparation of this document.

Overall Comments - Process

- BART should be identified in the 3rd SEIR and consulted as a Responsible Agency under CEQA.
- In order for VTA to proceed to Phase II project implementation, the BART Board of Directors must accept VTA's project, consider the environmental effects of the project as shown in your EIR and adopt findings on each significant effect as provided in CEQA Guidelines section 15096. In order to support this, VTA must collaborate closely with BART and share as much information as required as early in the process as possible.

Specific Comments

Project Description

- Although VTA will construct the Phase II Extension Project, BART will operate
 and maintain it. The project description must describe a functional project that
 BART can operate and maintain safely, efficiently and cost-effectively.
- A critical component of a functional project is a maintenance and storage facility. Inclusion of a full maintenance and storage facility is an absolute requirement for BART to participate in the implementation of this project. Currently, the proposed site is in Santa Clara, on the site of the former Southern Pacific Newhall Yard. If the Supplemental EIR considers any alternatives to that site, BART would require that they have equivalent functionality, that they be environmentally-cleared with the project, and that any impacts to BART or its operation be fully mitigated.

Transportation

- Impacts to BART's core system which may arise from the proposed extension must be
 documented and any impacts mitigated as part of VTA's project. If VTA's ridership analysis
 relies on project riders boarding at BART stations within the core system, VTA must ensure that
 sufficient access is provided to accommodate the increase from BART's projected core system
 ridership without the project. See additional comments on Core System Impacts.
- To accurately incorporate core system access for VTA project riders, VTA's modeling work
 performed in connection with the EIR must be updated to reflect a baseline calibrated to BART's
 current ridership level and level of crowding, and also must reflect BART's fleet planning
 activities, including the delivery of BART's new fleet over the coming years.

Energy and Power

FTA's Final Environmental Impact Statement for the Silicon Valley Rapid Transit Corridor (2010)
for the extension of BART to San Jose identified potential peak period power distribution
reliability problems in the San Jose area. The 3SEIR should update this analysis and fully
mitigate any shortfalls.

Cumulative Impacts

 The 3SEIR should include a number of projects in Cumulative Impacts as reasonably forseeable future projects. These should include Caltrain electrification and the Caltrain extension to Transbay Terminal, with the accompanying frequency increases planned for that system. The 3SEIR should also include the California High Speed Rail service from San Francisco to San Jose, and then on to Los Angeles and Southern California.

Core System Impacts

• VTA completed its Core System Impact Study in 2003 and its BART SVRT Core Stations Modification Study in 2011. In calendar 2003, BART's actual average weekday ridership was only 299,112, while in calendar 2011, it was 355,039. Since that time, BART's average weekday ridership continued to grow significantly. For calendar 2014, the comparable figure was 411,471. In addition, BART's ridership has become more concentrated in peak commute hours, and the largest ridership gains have occurred at our busiest stations, including Embarcadero and Montgomery. VTA's analysis of core system impacts needs to be updated to calibrate to current and projected conditions, and any new or increased impacts that were not identified in the previous study need to be documented and fully mitigated.

Thank you for the opportunity to comment on this Notice of Preparation. Please call Duncan Watry in BART Planning at (510) 287-4840 if you have any questions.

Sincerely,

Val Menotti

Notice of Preparation (NOP) of a 3rd Draft Supplemental Environmental Impact Report (SEIR) for VTA's BART Silicon Valley - Phase II Extension

Project

Dear Mr. Fitzwater:

Thank you for the opportunity to comment on the NOP of the 3rd Draft SEIR for VTA's BART Silicon Valley – Phase II Extension Project (BART Phase II Project). It is our understanding the BART Phase II Project is a 6-mile heavy rail extension project with four stations. Construction is planned to begin in 2019 and continue for six years.

As you know, the JPB has many active projects along the corridor as well as in the south terminal area that will support the BART extension project. Close coordination during environmental analysis, design and construction will be necessary to ensure the successful advancement of important projects in the south terminal area.

As such, we request your attention on evaluating in the BART Phase II SEIR permanent and temporary impacts to our existing infrastructure and service as well as the following active Caltrain projects:

- CBOSS PTC project, an advanced signal system currently being constructed and targeted for revenue service in 2015.
- Peninsula Corridor Electrification Project (PCEP), an electrified system from the 4th and King to Tamien Station and electric vehicles, targeted for construction starting 2016 and revenue service in 2020-2021.
- South Terminal Phase II project, an additional track between the Caltrain maintenance facility (CEMOF) and San Jose Diridon Station currently in the planning phase with an estimated construction completion date by 2023.
- South Terminal Phase III / Los Gatos Creek Bridge Replacement Project, an additional track between San Jose Diridon station and I-280 and replacement of the Los Gatos Creek Bridge currently being environmentally cleared with an estimated construction completion date by 2023.

1250 San Carlos Ave.- P.O. Box 3006 San Carlos, CA 94070-1306 650.508.6269 Caltrain / High Speed Rail (HSR) blended system, a high-speed rail project providing additive capital investments in the corridor, currently conceptually defined and not yet been environmentally cleared.

The projects above are described in the FEIR which can be found on our website: http://www.caltrain.com/projectsplans/CaltrainModernization/Modernization/PeninsulaCo-rridorElectrificationProject/PCEP_FEIR_2014.html. Please let us know if you'd like to meet for additional information and discussion.

We appreciation your consideration of our comments and we look forward to working with you in advancing your program. I can be reached at cockes@samtrans.com or (650) 508-6207.

Sincerely.

Stacy Cocke

Subject:

Notice of Preparation of 3rd Draft Supplemental Environmental Impact Report for BART

Silicon Valley - Phase II Extension Project

Dear Mr. Fitzwater:

The Santa Clara Valley Water District (District) has reviewed the Notice of Preparation (NOP) of 3rd Draft Supplemental Environmental Impact Report (SEIR) for BART Silicon Valley - Phase II Extension Project received by the District on February 3, 2015.

The proposed project includes crossings of the District's Central Pipeline (Emory Street and Stockton Avenue); Los Gatos Creek; the Guadalupe River; and Lower Silver Creek. In addition, there is a crossing of Coyote Creek that is part of the District's upcoming Mid-Coyote flood protection project, which is currently in final stages of planning with design scheduled for next year and construction in 2019. Crossings of these of District's facilities will require a District permit as per the District's Water Resources Protection Ordinance. Additionally, the VTA will need to obtain necessary land rights for crossings of District fee title property, which require the District's Board of Directors approval, prior to the start of construction and issuance of permits. As such the District is to be considered a responsible agency under CEQA.

The Draft SEIR should include updates as needed regarding impacts to flooding based on FEMA's current flood insurance rate maps.

Please forward a copy of the Draft SEIR, as well as other project documents, as they become available for our review and comments. Reference District File No. 26326 on further correspondence regarding this project. If you have any questions or need further information, you can reach me at (408) 630-2322.

Sincerely,

Colleen Haggerty, P.E.

March 2, 2015

Mr. Tom Fitzwater Environmental Programs and Resources Management, Bldg B-2 Valley Transportation Authority 3331 North First Street San Jose, CA 95134

SUBJECT: ENVIRONMENTAL SCOPING COMMENTS FOR THE BART-SILICON VALLEY PHASE II EXTENSION PROJECT

Dear Mr. Fitzwater:

The City of San José appreciates the opportunity to provide the following comments related to the development of the environmental impact report/environmental impact statement (EIR/EIS) for the BART-Silicon Valley Phase II Extension project.

Project Description

The project description of the EIR/EIS should include the following information:

• <u>Changes from previously approved environmental document(s)</u> - Describe the changes to the project description (as it relates to the Phase II project) from the previously approved 2007 Final Environmental Impact Report (16-mile project) and any analysis or reasoning that support the changes, e.g., elimination of the Western Dental portal location, changes to the Alum Rock Station area, etc.

Construction

- The project description should describe any measures to reduce construction impacts on businesses impacted by construction activities. While VTA policies do not currently support financial contributions to businesses impacted by the construction of the project, more aggressive and targeted measures should be considered to maintain the accessibility and viability of businesses through the construction process. Further, streamlining claims processes and including multi-lingual claims forms should be considered in the construction impact mitigation plan.
- Describe the temporary construction impacts to traffic and circulation, parking, and transit services associated with the construction of the stations and crossover box to include the anticipated duration of the impacts.
- The project description should describe the conceptual construction management plan along the route, including proposed truck routes, staging areas, and worker parking.
 Truck routes will require approval by the City's Department of Transportation.

Mr. Thomas Fitzwater

SUBJECT: BART-SILICON VALLEY PHASE II EXTENSION PROJECT

March 2, 2015

Page 2

- Changes to roadway vehicle capacity resulting from the projects The project description in the EIR/EIS should describe any changes to the roadway network due to the project. Potential changes that should be disclosed in the document include the removal or addition of travel lanes to accommodate the project, new turn lanes, and any new signals required to accommodate traffic flow into the station area "kiss and ride" and parking garages.
- <u>Changes to on-street parking</u> Discuss if on-street parking spaces will be removed in the vicinity of the new BART stations or BART supporting facilities.

Cultural Resources

Analyze potential construction vibration impacts from tunnel and station construction on historically significant structures along the route, particularly the Five Wounds Church and historic buildings along Santa Clara Street in downtown San José.

Consistency with City Land Use Plans and Policies

The Land Use section of the EIR/EIS should discuss how the project is consistent with the City's adopted plans and policies. Adopted plans to which the project should be analyzed include the Five Wounds, Little Portugal, 24th and William Street Urban Village Plans, the Diridon Station Area Plan and the Downtown Strategy 2000. This discussion should indicate how the project will further support or impede the implementation of the plan's goals and objectives on land use, urban design, circulation, parking, and parks and open space.

The EIR/EIS should discuss conformance with policies in the Envision San José 2040 General Plan, especially policies that establish thresholds for determining environmental impacts and policies related to transportation. A list of applicable General Plan Policies is included as an attachment to this letter.

Transportation

- The EIR should use the City's Transportation Level of Service Policy (City Council Policy 5-3) for determining thresholds of significance when evaluating vehicular traffic impacts of the project.
- The 2010 FEIS noted adverse impacts to various segments of the US 101 freeway associated with the BART project that could not be mitigated. However, since the approval of the FEIS, VTA has developed an expresslanes project along the US 101 corridor. The public comment period for the Draft Environmental Impact Study for the expresslanes project was closed as of February 26, 2015. The EIR/EIS should discuss how implementation of the expresslanes project will affect the analysis of freeway the BART Phase II project.
- The analysis should review review the need for the U.S. 101/Mabury Road interchange.
- According to the previous FEIR, the project will commit a "fair share contribution" toward the improvement of several affected roadways (e.g., widening of Montague

Mr. Thomas Fitzwater

SUBJECT: BART-SILICON VALLEY PHASE II EXTENSION PROJECT

March 2, 2015

Page 3

Expressway (Trade Zone Blvd/Montague Expressway). The current EIR/EIS should state that this contribution will remain. Note that designating intersections associated with highway interchanges as "protected" is not within the jurisdiction of the City of San José.

Utilities

- The EIR/EIS should discuss the management of utilities, particularly those that need to be relocated as part of the tunnel, station construction and other supportive infrastructure. Recent experience along Santa Clara Street indicates inaccuracies with utility mapping along the Santa Clara Street corridor. A strategic, advanced approach to working with utility companies to verify both active and abandoned facilities is critical to avoiding and/or minimizing unanticipated service disruptions to the community.
- Please discuss any anticipated service disruptions, estimated duration, and potential impact on the surrounding areas and any mitigation strategies.

In addition to the above described environmental review topics, it is requested VTA also evaluate the following issues in the EIR/EIS:

Access

The project description, land use and/or transportation section of the EIR/EIS should discuss station access, including connectivity with other transit/modes, usability, placemaking, safety, security and maintenance.

- In evaluating station portals, consider the requirements for the size of the portal escalators, stairways and elevators, and supportive infrastructure such as the width of sidewalks, lighting and accessible routes.
- In further defining the project, evaluate strategies for improving access to and from stations by transit/shuttle, foot and bike, including coordination with other transit/rail agencies, land use strategies, and enhanced bike and pedestrian facilities.
- Evaluate the impact of alternative parking scenarios (including phased, shared and/or reduced parking) on GHG emissions, ridership, access, and project cost. Factor in the City's adopted Diridon Station Area Plan and the associated parking analyses in evaluating alternative parking scenarios.
- Evaluate strategies for maximizing access by disadvantaged persons and/or communities.
- Because all BART users are pedestrians as they enter the system, various station configurations and portal locations should be assessed for pedestrian comfort, enjoyment, safety and security and, in turn, the functionality of the pedestrian environment both internal and external to the system.
- Assess the impact of various station configurations on security and maintenance needs (for example, elevators, length of passageways, stairway/escalators, sightlines, and materials).

Mr. Thomas Fitzwater

Station Configurations

• Alum Rock Station

Analyze designs, configurations, and operational improvements to maximize connectivity between BART and other transit and multimodal services. These services including VTA Bus, Bus Rapid Transit (including the potential to move the BRT Station currently under construction at 24th Street to 28th Street and Santa Clara), secure bike lockers/racks, and bike/pedestrian facilities, particularly surrounding streets, the Five Wounds Rail to Trail project and Coyote Creek Trail. Include an operational analysis of how the proposed circulation pattern for station and parking garage access will address pedestrian and bicyclist safety in the vicinity. Several schools exist in the vicinity of the station with children walking and biking through the station area. Also, discuss how the revised station footprint, "kiss and ride" drop off area, and parking garage will be consistent with the Five Wounds Urban Village Plan. This EIR/EIS should evaluate the parking garage location analyzed in previous environmental documents and included in the Five Wounds Urban Village Plan.

Downtown San Jose Station

- Analyze station portal locations included in previous environmental studies, including options for the adaptive reuse of the Western Dental building and assess other portal options given their proximity to existing and potential major destinations/origins.
 This alternative location can be studied as one of the project alternatives analyzed in the EIR/EIS.
- With respect to the Western Dental building, please discuss potential impacts to the
 historic character of the structure, as this structure is a candidate city landmark and is
 a contributing structure to the Downtown San José Commercial District, a National
 Registered Historic District (see the City of San José Historic Resources Inventory).
- Analyze designs, configurations, and operational improvements to maximize connectivity between BART and other transit and multimodal services, including Light Rail (LR), VTA Buses, BRT, Regional Buses, DASH, BikeShare, secure bike lockers/racks and downtown bike facilities.

Diridon Station

- Analyze designs, configurations, and operational improvements to maximize connectivity between BART and other transit and multimodal services at Diridon Station. This includes current transit options (VTA Light Rail, VTA Buses, Regional Buses, DASH, Bay Area BikeShare, secure bike lockers/racks, bike facilities, Caltrain, ACE, Capitol Corridor, Amtrak) and planned ones (an electrified Caltrain, improved ACE & Capitol Corridor services, High Speed Rail, Automated People Mover (APM) or Transit Network (ATN) Airport Connection). Specifically, the document should analyze options for a platform-to-platform transfer between BART, Caltrain, light rail (and other rail) and assess the potential ridership on a connector between the airport and Diridon.
- Factor in the City's adopted Diridon Station Area Plan and the associated parking analyses in evaluating alternative parking scenarios.

Mr. Thomas Fitzwater
SUBJECT: BART-SILICON VALLEY PHASE II EXTENSION PROJECT
March 2, 2015
Page 5

The City of San José appreciates the opportunity to review and comment on the project, however, we reserve the right to provide further comments based on changes to the currently described project. If you have questions concerning our comments, please contact John Davidson of the Department of Planning, Building and Code Enforcement at (408) 535-7895.

Sincerely,

Harry Freitas, Director

Planning, Building and Code Enforcement

Attachment: List of Envision San José 2040 General Plan Policies that apply to the BART Phase II project.

ATTACHMENT 1

Envision San José 2040 General Plan Policies that apply to the BART Silicon Valley – Phase II Extension Project

1. Aesthetics:

Policy CD-1.1: Require the highest standards of architectural and site design, and apply strong design controls for all development projects, both public and private, for the enhancement and development of community character and for the proper transition between areas with different types of land uses.

Policy CD-1.8: Create an attractive street presence with pedestrian-scaled building and land-scaping elements that provide an engaging, safe, and diverse walking environment. Encourage compact, urban design, including use of smaller building footprints, to promote pedestrian activity throughout the City.

Policy CD-1.13: Use design review to encourage creative, high-quality, innovative, and distinctive architecture that helps to create unique, vibrant places that are both desirable urban places to live, work, and play and that lead to competitive advantages over other regions.

2. Air Quality:

Policy MS-10.1: Assess projected air emissions from new development in conformance with the Bay Area Air Quality Management District (BAAQMD) CEQA Guidelines and relative to state and federal standards. Identify and implement feasible air emission reduction measures.

Policy MS-10.2: Consider the cumulative air quality impacts from proposed developments for proposed land use designation changes and new development, consistent with the region's Clean Air Plan and State law.

Policy MS-11.1: Require completion of air quality modeling for sensitive land uses such as new residential developments that are located near sources of pollution such as freeways and industrial uses. Require new residential development projects and projects categorized as sensitive receptors to incorporate effective mitigation into project designs or be located an adequate distance from sources of toxic air contaminants (TACs) to avoid significant risks to health and safety.

Policy MS-11.5: Encourage the use of pollution absorbing trees and vegetation in buffer areas between substantial sources of TACs and sensitive land uses.

Policy MS-13.1: Include dust, particulate matter, and construction equipment exhaust control measures as conditions of approval for subdivision maps, site development and planned development permits, grading permits, and demolition permits. At minimum, conditions shall

conform to construction mitigation measures recommended in the current BAAQMD CEQA Guidelines for the relevant project size and type.

3. Biological Resources:

Policy MS-21.4: Encourage the maintenance of mature trees, especially natives, on public and private property as an integral part of the community forest. Prior to allowing the removal of any mature tree, pursue all reasonable measures to preserve it.

Policy MS-21.5: As part of the development review process, preserve protected trees (as defined by the Municipal Code), and other significant trees. Avoid any adverse affect on the health and longevity of protected or other significant trees through appropriate design measures and construction practices. Special priority should be given to the preservation of native oaks and native sycamores. When tree preservation is not feasible, include appropriate tree replacement, both in number and spread of canopy.

Policy ER-4.1: Preserve and restore, to the greatest extent feasible, habitat areas that support special-status species. Avoid development in such habitats unless no feasible alternatives exist and mitigation is provided of equivalent value.

Policy ER-5.1: Avoid implementing activities that result in the loss of active native birds' nests, including both direct loss and indirect loss through abandonment, of native birds. Avoidance of activities that could result in impacts to nests during the breeding season or maintenance of buffers between such activities and active nests would avoid such impacts.

4. Cultural Resources:

Policy ER-10.1: For proposed development sites that have been identified as archaeologically or paleontologically sensitive, require investigation during the planning process in order to determine whether potentially significant archeological or paleontological information may be affected by the project and then require, if needed, that appropriate mitigation measures be incorporated into the project design.

Policy ER-10.2: Recognizing that Native American human remains may be encountered at unexpected locations, impose a requirement on all development permits and tentative subdivision maps that upon their discovery during construction, development activity will cease until professional archaeological examination confirms whether the burial is human. If the remains are determined to be Native American, applicable state laws shall be enforced.

Policy ER-10.3: Ensure that City, State, and Federal historic preservation laws, regulations, and codes are enforced, including laws related to archaeological and paleontological resources, to ensure the adequate protection of historic and pre-historic resources.

Policy LU-14.5: Continue and strengthen enforcement programs, such as those addressing vacant buildings, to promote the maintenance and survival of all classes of the city's historic and cultural resources.

5. Geology and Soils:

Policy EC-3.1: Design all new or remodeled habitable structures in accordance with the most recent California Building Code and California Fire Code as amended locally and adopted by the City of San José, including provisions regarding lateral forces.

Policy EC-3.2: Within seismic hazard zones identified under the Alquist-Priolo Fault Zoning Act, California Seismic Hazards Mapping Act and/or by the City of San José, complete geotechnical and geological investigations and approve development proposals only when the severity of seismic hazards have been evaluated and appropriate mitigation measures are provided as reviewed and approved by the City of San José Geologist. State guidelines for evaluating and mitigating seismic hazards and the City-adopted California Building Code will be followed.

Policy EC-4.1: Design and build all new or remodeled habitable structures in accordance with the most recent California Building Code and municipal code requirements as amended and adopted by the City of San José, including provisions for expansive soil, and grading and storm water controls.

Policy EC-4.2: Approve development in areas subject to soils and geologic hazards, including unengineered fill and weak soils and landslide-prone areas, only when the severity of hazards have been evaluated and if shown to be required, appropriate mitigation measures are provided. New development proposed within areas of geologic hazards shall not be endangered by, nor contribute to, the hazardous conditions on the site or on adjoining properties. The City of San José Geologist will review and approve geotechnical and geological investigation reports for projects within these areas as part of the project approval process.

Policy EC-4.4: Require all new development to conform to the City of San José's Geologic Hazard Ordinance.

Policy EC-4.5: Ensure that any development activity that requires grading does not impact adjacent properties, local creeks and storm drainage systems by designing and building the site to drain properly and minimize erosion. An Erosion Control Plan is required for all private development projects that have a soil disturbance of one acre or more, are adjacent to a creek/river, and/or are located in hillside areas. Erosion Control Plans are also required for any grading occurring between October 15 and April 15.

Policy EC-4.7: Consistent with the San José Geologic Hazard Ordinance, prepare geotechnical and geological investigation reports for projects in areas of known concern to address the implications of irrigated landscaping to slope stability and to determine if hazards can be adequately mitigated.

6. Greenhouse Gas Emissions:

Greenhouse Gas Reduction Strategy: Refer to Appendix 8 of the *Envision San Jose 2040 General Plan*, the City's Greenhouse Gas Reduction Strategy.

7. Hazards and Hazardous Materials:

- *Policy MS-13.2:* Construction and/or demolition projects that have the potential to disturb asbestos (from soil or building material) shall comply with all the requirements of the California Air Resources Board's air toxics control measures (ATCMs) for Construction, Grading, Quarrying, and Surface Mining Operations.
- *Policy EC-6.6:* Address through environmental review for all proposals for new residential, park and recreation, school, day care, hospital, church or other uses that would place a sensitive population in close proximity to sites on which hazardous materials are or are likely to be located, the likelihood of an accidental release, the risks posed to human health and for sensitive populations, and mitigation measures, if needed, to protect human health.
- *Policy EC-7.1:* For development and redevelopment projects, require evaluation of the proposed site's historical and present uses to determine if any potential environmental conditions exist that could adversely impact the community or environment.
- Policy EC-7.2: Identify existing soil, soil vapor, groundwater and indoor air contamination and mitigation for identified human health and environmental hazards to future users and provide as part of the environmental review process for all development and redevelopment projects. Mitigation measures for soil, soil vapor and groundwater contamination shall be designed to avoid adverse human health or environmental risk, in conformance with regional, state and federal laws, regulations, guidelines and standards.
- *Policy EC-7.4*: On redevelopment sites, determine the presence of hazardous building materials during the environmental review process or prior to project approval. Mitigation and remediation of hazardous building materials, such as lead-paint and asbestos-containing materials, shall be implemented in accordance with state and federal laws and regulations.
- *Policy EC-7.5:* On development and redevelopment sites, require all sources of imported fill to have adequate documentation that it is clean and free of contamination and/ or acceptable for the proposed land use considering appropriate environmental screening levels for contaminants. Disposal of groundwater from excavations on construction sites shall comply with local, regional, and state requirements.
- Action EC-7.10: Require review and approval of grading, erosion control and dust control plans prior to issuance of a grading permit by the Director of Public Works on sites with known soil contamination. Construction operations shall be conducted to limit the creation and dispersion of dust and sediment runoff.
- Action EC-7.11: Require sampling for residual agricultural chemicals, based on the history of land use, on sites to be used for any new development or redevelopment to account for worker

and community safety during construction. Mitigation to meet appropriate end use such as residential or commercial/industrial shall be provided.

8. Hydrology and Water Quality:

- *Policy ER-8.1:* Manage stormwater runoff in compliance with the City's Post-Construction Urban Runoff (6-29) and Hydromodification Management (8-14) Policies.
- *Policy ER-8.3*: Ensure that private development in San José includes adequate measures to treat stormwater runoff.
- *Policy ER-8.4:* Assess the potential for surface water and groundwater contamination and require appropriate preventative measures when new development is proposed in areas where storm runoff will be directed into creeks upstream from groundwater recharge facilities.
- *Policy ER-8.5:* Ensure that all development projects in San José maximize opportunities to filter, infiltrate, store and reuse or evaporate stormwater runoff onsite.
- *Policy ER-9.2:* In consultation with the SCVWD restrict or carefully regulate public and private development in upland areas to prevent uncontrolled runoff that could impact the health and stability of streams.
- *Policy EC-4.1:* Design and build all new or remodeled habitable structures in accordance with the most recent California Building Code and municipal code requirements as amended and adopted by the City of San José, including provisions for expansive soil, and grading and storm water controls.
- *Policy EC-5.7:* Allow new urban development only when mitigation measures are incorporated into the project design to ensure that new urban runoff does not increase flood risks elsewhere.
- Action EC-5.16: Implement the Post-Construction Urban Runoff Management requirements of the City's Municipal NPDES Permit to reduce urban runoff from project sites.
- *Policy IN-3.9:* Require developers to prepare drainage plans that define needed drainage improvements for proposed developments per City standards.

9. Land Use and Planning:

- *Policy LU-1.1:* Encourage Walking. Create safe, attractive, and accessible pedestrian connections between developments and to adjacent public streets to minimize vehicular miles traveled.
- *Policy LU-1.2:* Create safe, attractive, and accessible pedestrian connections between developments and to adjacent public streets to minimize vehicular miles traveled.
- *Policy LU-6.1:* Prohibit conversion of lands designated for light and heavy industrial uses to non-industrial uses. Prohibit lands designated for industrial uses and mixed industrial-commercial uses to be converted to non-employment uses. Lands that have been acquired by the

City for public parks, public trails, or public open space may be re-designated from industrial or mixed-industrial lands to non-employment uses. Within the Five Wounds BART Station and 24th Street Neighborhood Urban Village areas, phased land use changes, tied to the completion of the planned BART station, may include the conversion of lands designated for Light Industrial, Heavy Industrial or other employment uses to non-employment use provided that the Urban Village areas maintain capacity for the overall total number of existing and planned jobs.

- *Policy LU-6.2:* Prohibit encroachment of incompatible uses into industrial lands, and prohibit non-industrial uses which would result in the imposition of additional operational restrictions and/or mitigation requirements on industrial users due to land use incompatibility issues.
- *Policy LU-6.3:* When new uses are proposed in proximity to existing industrial uses, incorporate measures within the new use to minimize its negative impacts on existing nearby land uses and to promote the health and safety of individuals at the new development site.
- *Policy LU-6.4:* Encourage the development of new industrial areas and the redevelopment of existing older or marginal industrial areas with new industrial uses, particularly in locations which facilitate efficient commute patterns. Use available public financing to provide necessary infrastructure improvements as one means of encouraging this economic development and revitalization.
- *Policy LU-6.7:* Encourage supportive and compatible commercial and office uses in industrial areas designated for those uses. In areas reserved for light and heavy industrial uses, only limited auxiliary and incidental commercial uses, such as small eating establishments, may be permitted when such uses are of a scale and design providing support only to the needs of businesses and their employees in the immediate industrial area.
- *Policy LU-6.8:* Reserve industrial areas for industrial and compatible support uses, while recognizing that industrial uses come in a variety of types and forms. Allow non-industrial uses which are only incidental to and totally compatible with primary industrial uses in exclusively industrial areas. Consider allowing supportive, non-industrial activities, such as retail sales of materials manufactured or stored on site.
- *Policy LU-9.1:* Create a pedestrian-friendly environment by connecting new residential development with safe, convenient, accessible, and pleasant pedestrian facilities. Provide such connections between new development, its adjoining neighborhood, transit access points, schools, parks, and nearby commercial areas. Consistent with Transportation Policy TR-2.11, prohibit the development of new cul-de-sacs, unless it is the only feasible means of providing access to a property or properties, or gated communities, that do not provide through- and publicly-accessible bicycle and pedestrian connections.
- *Policy LU-9.5:* Require that new residential development be designed to protect residents from potential conflicts with adjacent land uses.
- *Policy LU-9.7:* Ensure that new residential development does not impact the viability of adjacent employment uses that are consistent with the *Envision General Plan* Land Use / Transportation Diagram.

Policy LU-9.17: Limit residential development in established neighborhoods that are not identified growth areas to projects that conform to the site's Land Use / Transportation Diagram designation and meet Urban Design policies in this Plan.

10. Noise:

Policy EC-1.1: Locate new development in areas where noise levels are appropriate for the proposed uses. Consider federal, state and City noise standards and guidelines as a part of new development review. Applicable standards and guidelines for land uses in San José include:

Interior Noise Levels

• The City's standard for interior noise levels in residences, hotels, motels, residential care facilities, and hospitals is 45 dBA DNL. Include appropriate site and building design, building construction and noise attenuation techniques in new development to meet this standard. For sites with exterior noise levels of 60 dBA DNL or more, an acoustical analysis following protocols in the City-adopted California Building Code is required to demonstrate that development projects can meet this standard. The acoustical analysis shall base required noise attenuation techniques on expected *Envision General Plan* traffic volumes to ensure land use compatibility and General Plan consistency over the life of this plan.

Exterior Noise Levels

- The City's acceptable exterior noise level objective is 60 dBA DNL or less for residential and most institutional land uses (Table EC-1). The acceptable exterior noise level objective is established for the City, except in the environs of the San José International Airport and the Downtown, as described below:
 - For single family residential uses, use a standard of 60 dBA DNL for exterior noise in private usable outdoor activity areas, such as backyards.

Table EC-1 Land Use Compatibility Guidelines for Community Noise in San José						
Land Use Category	Exterior DNL Value in Decibels					
Land Ose Category	55	60	65	70	75	80
Residential, Hotels and Motels, Hospitals and Residential Care ¹						
Outdoor Sports and Recreation, Neighborhood Parks and Playgrounds						
3. Schools, Libraries, Museums, Meeting Halls, and Churches						
4. Office Buildings, Business Commercial, and Professional Offices		•				
5. Sports Arena, Outdoor Spectator Sports						
6. Public and Quasi-Public						

Table EC-1 Land Use Compatibility Guidelines for Community Noise in San José **Exterior DNL Value in Decibels Land Use Category** 55 70 80 65 75 Auditoriums, Concert Halls, and Amphitheaters ¹Noise mitigation to reduce interior noise levels pursuant to Policy EC-1.1 is required. **Normally Acceptable:** Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements. **Conditionally Acceptable:** Specified land use may be permitted only after detailed analysis of the noise reduction requirements and noise mitigation features included in the design. **Unacceptable:** New construction or development should generally not be undertaken because mitigation is usually not feasible to comply with noise element policies. Development will only be considered when technically feasible mitigation is identified that is also compatible with relevant design guidelines.

Policy EC-1.2: Minimize the noise impacts of new development on land uses sensitive to increased noise levels (Categories 1, 2, 3 and 6) by limiting noise generation and by requiring use of noise attenuation measures such as acoustical enclosures and sound barriers, where feasible. The City considers significant noise impacts to occur if a project would:

- Cause the DNL at noise sensitive receptors to increase by five dBA DNL or more where the noise levels would remain "Normally Acceptable"; or
- Cause the DNL at noise sensitive receptors to increase by three dBA DNL or more where noise levels would equal or exceed the "Normally Acceptable" level.

Policy EC-1.3: Mitigate noise generation of new non-residential land uses to 55 dBA DNL at the property line when located adjacent to existing or planned noise sensitive residential and public/quasi-public land uses.

Policy EC-1.7: Require construction operations within San José to use best available noise suppression devices and techniques and limit construction hours near residential uses per the City's Municipal Code. The City considers significant construction noise impacts to occur if a project located within 500 feet of residential uses or 200 feet of commercial or office uses would:

• Involve substantial noise generating activities (such as building demolition, grading, excavation, pile driving, use of impact equipment, or building framing) continuing for more than 12 months.

For such large or complex projects, a construction noise logistics plan that specifies hours of construction, noise and vibration minimization measures, posting or notification of construction schedules, and designation of a noise disturbance coordinator who would respond to neighborhood complaints will be required to be in place prior to the start of construction and

implemented during construction to reduce noise impacts on neighboring residents and other uses.

Policy EC-2.3: Require new development to minimize vibration impacts to adjacent uses during demolition and construction. For sensitive historic structures, a vibration limit of 0.08 in/sec PPV will be used to minimize the potential for cosmetic damage to a building. A vibration limit of 0.20 in/sec PPV will be used to minimize the potential for cosmetic damage at buildings of normal conventional construction.

11. Public Services:

Policy FS-5.6: When reviewing major land use or policy changes, consider the availability of police and fire protection, parks and recreation and library services to the affected area as well as the potential impacts of the project on existing service levels.

Policy FS-5.7: Encourage school districts and residential developers to engage in early discussions regarding the nature and scope of proposed projects and possible fiscal impacts and mitigation measures early in the project planning stage, preferably immediately preceding or following land acquisition.

Policy PR-1.1: Provide 3.5 acres per 1,000 population of neighborhood/community serving parkland through a combination of 1.5 acres of public park and 2.0 acres of recreational school grounds open to the public per 1,000 San José residents.

Policy PR-1.2: Provide 7.5 acres per 1,000 population of citywide/regional park and open space lands through a combination of facilities provided by the City of San José and other public land agencies.

Policy PR-1.3: Provide 500 square feet per 1,000 population of community center space.

Policy ES-3.8: Use the Land Use / Transportation Diagram to promote a mix of land uses that increase visibility, activity and access throughout the day and to separate land uses that foster unsafe conditions.

Policy ES-3.11: Ensure that adequate water supplies are available for fire-suppression throughout the City. Require development to construct and include all fire suppression infrastructure and equipment needed for their projects.

12. Recreation:

Policy PR-1.1: Provide 3.5 acres per 1,000 population of neighborhood/community serving parkland through a combination of 1.5 acres of public park and 2.0 acres of recreational school grounds open to the public per 1,000 San José residents.

Policy PR-1.2: Provide 7.5 acres per 1,000 population of citywide/regional park and open space lands through a combination of facilities provided by the City of San José and other public land agencies.

Policy PR-1.3: Provide 500 square feet per 1,000 population of community center space.

Policy PR-2.5: Spend, as appropriate, PDO/PIO fees for community serving elements (such as soccer fields, dog parks, sport fields, community gardens, community centers, etc.) within a 3-mile radius of the residential development that generates the PDO/PIO funds.

13. Transportation/Traffic:

Policy CD-2.10: Recognize that finite land area exists for development and that density supports retail vitality and transit ridership. Use land use regulations to require compact, low-impact development that efficiently uses land planned for growth, especially for residential development which tends to have a long life-span. Strongly discourage small-lot and single-family detached residential product types in Growth Areas.

Policy CD-3.3: Within new development, create and maintain a pedestrian-friendly environment by connecting the internal components with safe, convenient, accessible, and pleasant pedestrian facilities and by requiring pedestrian connections between building entrances, other site features, and adjacent public streets.

Policy CD-3.6: Encourage a street grid with lengths of 600 feet or less to facilitate walking and biking. Use design techniques such as multiple building entrances and pedestrian paseos to improve pedestrian and bicycle connections.

Policy TR-5.3: The minimum overall roadway performance during peak travel periods should be level of service "D" except for designated areas. How this policy is applied and exceptions to this policy are listed in the following bullets:

- Vehicular Traffic Mitigation Measures. Review development proposals for their impacts
 on the level of service and require appropriate mitigation measures if development of
 the project has the potential to reduce the level of service to "E" or worse. These
 mitigation measures typically involve street improvements. Mitigation measures for
 vehicular traffic should not compromise or minimize community livability by
 removing mature street trees, significantly reducing front or side yards, or creating
 other adverse neighborhood impacts.
- Area Development Policy. An "area development policy" may be adopted by the City Council to establish special traffic level of service standards for a specific geographic area which identifies development impacts and mitigation measures. These policies may take other names or forms to accomplish the same purpose. Area development policies may be first considered only during the General Plan Annual Review and Amendment Process; however, the hearing on an area development policy may be continued after the Annual Review has been completed and the area development policy may thereafter be adopted or amended at a public meeting at any time during the year.
- Small Projects. Small projects may be defined and exempted from traffic analysis per the City's transportation policies.

• Special Strategy Areas. In recognition of the unique characteristics and particular goals of Special Strategy Areas, intersections identified as Protected Intersections within these areas, may be exempt from traffic mitigation requirements. Special Strategy Areas are identified in the City's adopted General Plan and include Urban Villages, Transit Station Areas, and Specific Plan Areas.

Policy TR-9.1: Enhance, expand and maintain facilities for walking and bicycling, particularly to connect with and ensure access to transit and to provide a safe and complete alternative transportation network that facilitates non-automobile trips.

14. Utilities and Service Systems:

Policy MS-3.2: Promote use of green building technology or techniques that can help reduce the depletion of the City's potable water supply, as building codes permit. For example, promote the use of captured rainwater, graywater, or recycled water as the preferred source for non-potable water needs such as irrigation and building cooling, consistent with Building Codes or other regulations.

Policy MS-3.3: Promote the use of drought tolerant plants and landscaping materials for non-residential and residential uses.

Action EC-5.16: Implement the Post-Construction Urban Runoff Management requirements of the City's Municipal NPDES Permit to reduce urban runoff from project sites.

Subject: Phase 2

Date: Sunday, February 01, 2015 8:42:36 AM

I write in favor of the proposed extension, including the Five Wounds Station and hopefully a future station at Mineta San Jose International Airport.

I would also hope that there would be a Phase 3, taking BART as far as Palo Alto, so that it could eventually meet up with BART from the north,

should San Mateo County ever come to its senses. At least we can pray.

Thank you.

Msgr. Francis V. Cilia San Jose From: <u>Barbara Gundy</u>

Subject: Attn Tim Fitzwater - Bart Phase 2 - hope it happens

Date: Monday, February 02, 2015 2:11:41 PM

Attn: Tim Fitzwater

I approve and hope this Bart Phase 2 extension will happen. It is worth the cost. I would love to go to SF via Bart from Diridon.

Thank you, Barbara Gundy 809 Auzerais Ave, Unit 127 San Jose, CA 95126 From: Lee Phillips

Subject: environmental impacts near Caltrain/Cahill neighborhood

Date: Tuesday, February 03, 2015 1:07:24 PM

Hello,

My main concern with this Phase 2 Bart project near the Caltrain station are the following:

- 1. Increased air pollution from the rail. I was hoping for electrification however I am unsure if this is the case.
- 2. Containment of the noise and disruption to residents limited to only business hours.

Thank you, Lee Phillips From: Kris Kooi

Subject:BART Silicon Valley Phase II ExtensionDate:Wednesday, February 04, 2015 7:08:53 PM

Dear Mr. Fitzwater,

I am writing today to voice my absolute support for VTA's BART Silicon Valley Phase II Extension. I have lived near the Santa Clara Caltrain Station for two years now, and I find it remarkable how difficult it is to go to the East Bay on public transportation. I do not drive, so public transportation is often my only means of travel. I would welcome the option of taking BART, and I hope this project is able to proceed quickly.

Best wishes, Kristopher Kooi From: Bonnie

Subject: Bart

Date: Friday, February 13, 2015 10:57:55 AM

I have lived in Sans Jose a long time and it seems again we are being short changed, we are receiving the BART to no where! Why, why is this not going into San Jose Airport. Please lets not be influenced by politics and money finally lets do something for San Jose residents. I love Bart and ride subway systems all over the world but they have to go somewhere to be used. Right now this leg will take me no where I go. This is kind of like the train between the Bay Area and Los Angeles which is useless as you have to ride a bus for part of the trip.

By the time the people in the upper Bay Area buy and use political insiders I could be a hundred years old by then before Bart actually gets me to SFO.

Subject: VTA's BART Silicon Valley Phase II

Date: Friday, February 13, 2015 4:38:50 PM

Dear Valley Transportation Authority,

I am a resident of Sunnyvale and work in Downtown San Jose. I 100% support this initiative. The only thing I would request for this project -- is there a way we can "fast track" the approvals and implementation of such a critical and needed project? I am fearful that while the Extension is vital; it will be held up in meetings and reviews to take what some might call an eternity.

Subject: BART Silicon Valley Extension Phase 2 SEIS/SEIR3 comments

Date: Sunday, February 15, 2015 9:32:05 AM

Good day:

This email is in response to VTA's call-for-comments regarding the BART Silicon Valley Extension Phase 2 SEIS/SEIR3 scoping process, as discussed in three public meetings during February. Please add these comments to the formal record.

I oppose the "Build Alternative" as presented by VTA. There is no attempt to eliminate waste and "gold plating" of the BART extension by reducing the scope to eliminate duplicate facilities. Specifically, a revised "build alternative" needs to be added to the study that eliminates the duplicative and wasteful section between the San Jose and Santa Clara Caltrain stations. The BART segment from the San Jose to Santa Clara Caltrain stations would duplicate the existing Caltrain line, to a station that has only 900 riders. This is extremely wasteful and sends the wrong message to voters who will be asked to approve yet another sales tax increase in 2016. This is extremely insulting considering recent voter approval of two BART tax increases, a vehicle registration fee, high speed rail, and statewide infrastructure bonds. Regarding the endless tax/fee increases, when is enough enough?

Construction is disruptive and damaging to the environment. Therefore it needs to be minimized when there is existing transportation capacity in the route in question. Between the Santa Clara and San Jose Caltrain stations, the following services currently operate: Caltrain, ACE, Capitol trains, VTA 22 and 522 bus routes, the latter soon to be upgraded to Bus Rapid Transit. Therefore, building another expensive transit system between those two points would waste valuable public funds and cause damage to the environment from the emissions of the construction equipment and the additional emissions of vehicles forced into inconvenient detours around the construction sites, plus the emissions from the generation of electric power for the BART trains. Why add emissions to the existing bus and rail service? Demand for transit service between San Jose and Santa Clara can be met with the existing and proposed transit services between those two points, without a costly BART extension.

BART to Santa Clara is not needed. VTA needs to eliminate waste and bloat from its existing transportation projects before returning to the voters in 2016 with yet another tax increase.

Sincerely,

Steve Ly

From: Fadi Saba
To: bartphase2eis-eir
Subject: Diridon BART statio

Date: Tuesday, February 17, 2015 4:25:23 PM

Hello,

Please consider this to be official input on the proposed BART station near the Diridon Transit Center.

I'm excited by the prospect of BART coming to Downtown San Jose. It should have happened decades ago. I would like to discuss three of the 4 proposed stations: all in San Jose.

Five Wounds: this station is important for the community east of Downtown. It will be an important link for East San Jose to other parts of the Bay Area. It will help, along with Berryessa, in facilitating people's commutes to and fro work.

Downtown station: both options, east and west, are fine in general. But only the 'east' option actually has station enterences on Santa Clara Street. It is vitally important to have the main station enterences on the main street. The 'west' option is a bit better in its location (though not station enterence) because it's still close to SJSU and City Hall on one side and close to downtown's center on the other.

And finallly, Diridon: I notice that the line veers to the south of Santa Clara Street in order to be close to Diridon station. That is a nice intent. However, I would venture to say that the station line should be directly under Santa Clara Street here as well. Enterences could be right on the main street. For a 'seemless' experience when transfering from Caltrain to BART, then have a tunnel connecting the Caltrain station to the BART station. I worry that BART will make a lot of rumbling sounds reducing the quality of life for those who live in the immediate area; whereas if left along the main roadway, such rumblings will be left to a minimum.

Should you have any questions or comments, please do not hesitate to contact me at this email address.

Thank you,

Fadi Saba 61 Wilson Avenue San Jose, CA. 95126 From: Lyn C

Hello

I'm unable to attend the local meeting on Lunar New Year as it's a important holiday, though I have been disturbed by the talk that the BART phase II extension would be cancelled.

I believe it's being titled "The Future No-Build" option. I believe just this mailer received is confusing as is but I assume it is addressing the idea that some propose that the Santa Clara Bart Extension gets cut down to one station serving the entire population of 1.7 million people.

This is an insulting proposal to the largest county of the Bay Area, and the 5th most populous county in the entire state of California. According to the BART Wikipedia page, "Nineteen stations are in Alameda County, eleven are in Contra Costa, [...]eight are in San Francisco [and] six stations are in San Mateo County."

Yet Santa Clara Valley may only get one? It's ridiculous as is that we are at best getting five stations when compared to the other counties served, when you consider our land and population size is so great. We deserve quality public transit. We are a prosperous county full of packed highways that are need of relief.

A single station would flood the Berryessa area with extra traffic, forcing west and south valley residents to commute a long distance just to get to a BART train. I can't even imagine how there will be enough parking to accommodate the vehicles that may fill that station's lot. This would be a nightmare for most residents that would need this BART extension to be completed as initially promised to us.

We didn't vote on one station, we voted for a solid solution to connect our current public transit options to the fully proposed BART extension. This is a huge problem with our current VTA options, that they just don't work for most residents.

To promise the tax payers and voters this extension and then half ass it is immoral. There shouldn't even be a question as to whether it will happen. If other Bay Area counties can have BART stations, we should be treated no different.

I also find it ridiculous that if I can't attend my local meeting, that I will not be informed of the reasons to not build, whether they be budget or other. This sort of information should be truly public with as many ways to access information as possible. If there are other options to be fully informed, it should be noted in the newsletter I received.

I will be truly disturbed and disappointed in any public official that is responsible for allowing this extension to be cancelled. This is not tolerable. We deserve public projects that make residents lives better.

Sincerely, Jocelyn Chiu From: Kay Gutknecht

Subject: Environmental Impact comments

Date: Tuesday, February 17, 2015 6:45:47 PM

I would like to ensure the environmental impact report covers the following two areas that continue to be of primary concern to the Alameda Park neighborhood, and that we are kept apprised of progress as firm construction dates are set and work begins to undermine our living space:

- 1. Construction impact and ongoing noise and vibration impact of the underground tunnel from the Diridon Station that will run under our neighborhood.
- 2. The noise from the ventilation equipment circulating air into the underground tunnel running through our neighborhood.

As we already suffer from airport and Caltrain noise, any additional impact seems an undue burden for one single neighborhood to bear, and I would like to understand how we will be protected and compensated.

If you have questions, please do not hesitate to contact me at 408-483-8474.

 BART Phase 2 Comments

Date: Wednesday, February 18, 2015 12:50:00 PM

Dear Mr Fitzwater:

We attended the public comment meeting on the BART Phase 2 project Tuesday night in Downtown San Jose, and we would like to add a comment. We are strongly in favor of BART going all of the way to Mineta San Jose International Airport (SJC). Linking the airport to the regional transit system via BART would be a major benefit for the local community and the region, and the opportunity to plan for this link should not be missed. We understand that there is a VTA bus link between Santa Clara Caltrain and SJC that will serve this purpose, but a bus link is not the ideal choice. The popularity of the recently opened BART link to Oakland International Airport is evidence of how well such a link to SJC would be received.

We understand that getting approval for the proposed four-station route will be a major undertaking and that adding a fifth station would be extremely difficult at this time. But at the very least, we ask that design and engineering of the Santa Clara end-of-the-line be done to accommodate a "Phase 3" extension to a new end-of-the-line station at SJC in the future.

 BART Phase 2 Comments

Date: Wednesday, February 18, 2015 2:08:14 PM

Dear Mr Fitzwater:

I attended the public comment meeting on the BART Phase 2 project Tuesday night in Downtown San Jose, and I would like to add two comments.

- I suggest that the proposed BART station at Diridon be designed and built to allow an underground transit plaza where both BART and VTA Light Rail stations can be. This would, of course, involve moving the existing Diridon LR station to the underground portion of its tracks. It would be very advantageous to have the BART and LR stations in very lose proximity, creating a transit plaza much like the Embarcadero Transit Center in San Francisco, where BART and MUNI Light Rail share a plaza.
- I prefer the West Alternative location for the proposed Downtown BART station, simply because it creates a much shorter transfer distance between BART and Light Rail. The East Alternative location could result in a three-block walk between the two.

Attachments: Bus Service Level.png

Given the track record of BART-SJX Phase 1 (bus service levels down close to 20% since the start of Phase 1 in 2000),

10 10 10 how will Phase 2 affect bus service levels in Santa Clara County?

- 1. Bus service levels were not to drop as a result of BART-SJX per MTC dictates.
- 2. Bus service levels were to increase as called for in the tax measure which also is funding BART.
- 3. Bus service levels need to increase as the population and tax revenues do.
- 4. BART will bring more transit ridership to Santa Clara County but will there be less public transit?

Subject: public comments on the scope of the environmental analysis for the BART extension

Date: Friday, February 20, 2015 1:10:03 PM

Attachments: BART-PRT-comments.pdf

Hi Folks,

Here is an excerpt from the attached comments:

Rapidly accelerating global climate disruption requires major changes quickly. Waiting a decade or more to use 50-year old technology to serve a small fraction of our population is like responding to an oncoming train by freezing in its path. Reversing global warming requires new thinking and bold action. As one of the wealthiest, most technologically-advanced areas in the world, Silicon Valley can lead the effort to create transit that works for our spread-out suburban cities, and promotes transportation equity.

--

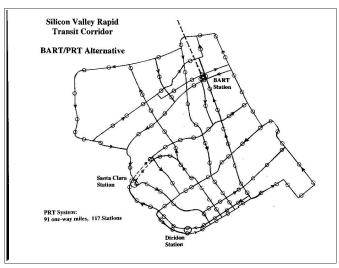

Rob Means, Secretary Sunnyhills Neighborhood Association P. O. Box 360581, Milpitas, CA 95036-0581 408-262-0420, SNA@electric-bikes.com www.SunnyhillsNeighborhood.org

\$4B for 4 BART stations OR \$2B for 100 ATN stations?

The \$4000M (million) price tag of burrowing a tunnel under San Jose for BART is too costly financially, and draws resources away from other transit options. The projected 55,000 passengers/day service level in 2045 is too small relative to the need for transit. And the construction schedule ensures that global climate disruption will overwhelm us before it's built. So, if given only two choices – build it or not – I would vote for "not" because the return on investment (ROI) is too low.

I urge you to consider another possibility for connecting the BART Berryessa station with the Caltrain station. Rather than spend roughly \$4700M for a 4-station BART extension and service yard, only spend about \$1500M for an Automated Transit Network (ATN). At \$15M/mile (which includes elevated guideway, off-line stations, cabs, and computer control), we could build a 100-station ATN that serves the public far better and provides quick, non-stop service between stations.

In 2001, during the public comment period on the BART extension, an ATN alternative to the

BART Burrow was proposed. Shown at http://www.electric-bikes.com/prt/bart-prt.html, it outlined 91 miles of ATN guideway with 117 stations. That proposed network covers the Golden Triangle and downtown San Jose. Now, we can plan a network that matches our current needs.

Based on the chart below, over 100 networked stations operating 24/7 with quiet, non-stop travel would benefit our sprawling area more than a 4-station BART corridor extension. Using VTA's own Project Purpose list, the two options are compared. This scoping process would be served by VTA staff creating their own comparison chart and sharing it with the VTA Board.

Purpose	BART	ATN
Improve public transit service	Low/Medium	High
Enhance regional connectivity	Medium	High
Increase transit ridership	Low/Medium	High
Support transportation solutions that will maintain the economic vitality and continuing development of Silicon Valley	Low	High
Improve mobility options	Medium	High
Enhance level and quality of transit service to areas of existing and planned affordable housing	Medium	High
Improve regional air quality	Low	High
Support local and regional land use plans	Medium	High

Omitted from this VTA-generated list of purposes is any reference to ROI or comparison with other transit technologies. Also missing is any reference to the present and growing danger of our global climate crisis, and the need to act quickly and boldly to avoid huge and costly problems. If Zero-Based Budgeting were applied to this BART extension, would it survive?

In 2001, BART promoters rejected the concept of bridging the gap between an eastside BART station and Caltrain using ATN. They responded that the need for a transfer "would result in longer travel times and inconveniences to the rider that would not be consistent with the project's purpose to 'maximize transit usage and ridership' nor would it facilitate regional connectivity." I assert that 100 stations will, in fact, be consistent with VTA's purposes. And transfers are not a problem for transit users in San Francisco who enjoy frequently scheduled transit. In suburban areas, however, transferring users generally must wait for the next vehicle.

However, unlike traditional transit options, ATN cabs are waiting for you 90% of the time, and available within 5 minutes the other 10%. This service level is accomplished with computer control, and by adding enough cabs and stations to satisfy demand. If congestion occurs, add more infrastructure. ATN hardware

costs less than 10% of BART hardware and is much easier to route and build as needed.

That scalability and flexibility of ATN dramatically reduces the risk of using the technology. In just 5 years we could be operating a \$200M starter network that connects BART to Caltrain. If we like that system, then we could grow the network as appropriate.

Rapidly accelerating global climate disruption requires major responses quickly. Waiting a decade or more to use 50-year old technology to serve a small fraction of our population is like responding to an oncoming train by freezing in its path. Reversing global warming requires new thinking and bold action. As one of the wealthiest, most technologically-advanced areas in the world, Silicon Valley can lead the effort to create transit that works for our spread-out suburban cities, and promotes transportation equity. Doing so will dramatically improve our mobility options and reduce our extremely high per-capita carbon emissions.

As I see it, the BART extension is not desirable because the ROI of ridership to capital investment is too low, the financial and climate crisis risks are too high, and the opportunity costs of saving \$2B and creating an effective transit system are too high.

Vote "no" on the BART extension and "yes" on an ATN connection.

You can help jump-start advanced transit by supporting a pilot project in Milpitas (see http://sunnyhillsneighborhood.org/crossing.html). Many of the questions and concerns of elected officials and VTA staff will be answered once this \$8M project is operational.

Mr. Tom Fitzwater Environmental Programs and Resources Management, Bldg B-2 Valley Transportation Authority 3331 North First Street San Jose, CA 95134

UTA ENVIRONMENTAL 2015MARO4 AMOS:13

Dear Mr. Fitzwater:

The San Jose/Santa Clara League of Women Voters appreciates the opportunity to comment on the scoping of the Environmental Impact Report for the VTA BART Silicon Valley Phase II Extension Project. Our comments focus on the 28th Street Station and its relationship to the development of the San Jose Downtown urban core and address the environmental topics of Air Quality and Greenhouse Emissions, Transportation, and Socioeconomics that should be included in the scoping.

Air Quality and Greenhouse Gas Emissions

The Bay Area Air Quality Management District has set a high priority on reduction of Greenhouse Gas Emissions, the major component of deterioration of air quality in the Bay Area. A key component of this strategy is the development of Urban Villages, high density, mixed-use development oriented to available transit facilities to reduce the dependence on automobile travel. Thus, the Five Wounds Urban Village/28th Street BART Station in the adopted San Jose Envision 2040 General Plan carries significance at the regional level and the site-specific implementation strategies in the General Plan.

Support for San Jose Downtown Core

A downtown San Jose BART station east of Diridon that provides a seamless connection to VTA Light Rail appears to be a crucial factor for ridership, especially from the east, and for economic development of the urban core.

Socioeconomics

There is evidence from completed Transit-Oriented Development projects throughout the Bay Area region that access to a BART station carries not only measurable benefits such as increased access to job opportunities and public services but also immeasurable benefits of

walkability and community engagement. Thus, a socioeconomic evaluation of the affected BART station areas would be an essential element.

Thank you for your consideration of our comments, and we look forward to participating with you throughout the evaluation.

Sincerely,

Cecilie Schulze, President

Cocilie Schufe

Subject: BART Silicon Valley Phase 2

Date: Tuesday, February 24, 2015 10:45:56 AM

Dear Mr. Fitzwater,

I attended the BART to SV Phase 2 meeting last week. I am very enthused about the project, voted for it in 2000 and again in 2008, but wanted to express some concerns/ideas regarding the extension:

1. <u>BART Diridon Station</u>: This has never been in any proposal I have seen, but I would like to encourage VTA to consider building an underground passage way from the present underground passageway at the Diridon Station to the future BART Diridon Station. At the present time, when Caltrain arrives at the station about 20% of the passengers take the underground pedestrian passageway to reach the Winchester light rail line and 80% make their way into the station to reach the parking lots, the bus bays, and/or the front of the station for a ride/taxi.

A dedicated underground passageway from the present Diridon pedestrian passageway to future BART Diridon would direct passengers making a transfer to BART easier, in less time, and also alleviate the crowding that already exists when trains arrive and most of passengers funnel into the Diridon Terminal. Hopefully, the present VTA light rail tunnel under Diridon is deep enough so a pedestrian passageway is a possibility.

- 2. <u>Parking Structures</u>: I don't recall a parking structure being part of the BART Diridon Station plan. This is something that will need to be built for this location to serve all transit agencies as well as events in downtown San Jose. Can it be a joint effort of VTA, The JPB, ACE, Capitol Corridor, Amtrak, and the City of San Jose? AND I would hope construction of any parking structure at Diridon as well as all parking structures in BART SV Phase 1 and BART SV Phase 2 will be built in such a way that additional parking floors can be easily added in the future without having to rebuild/reinforce the original structure; these parking structures will fill quickly and additional parking will be necessary a few years later. . . for example, look at the size of the parking structure at BART's Dublin/Pleasanton Station.
- 3. <u>BART Downtown SJ:</u> Regardless of building option 1 or option 2 for the BART Downtown Station, neither option shows a BART entrance adjacent to the light rail/bus stop on First Street and Santa Clara. The nearest entrance to BART will be on Fountain Alley which more easily serves the light rail/bus stop on Second Street and Santa Clara. This is NOT "a biggie" . . . I just thought it odd that the BART entrance favored the Second Street light rail station in both cases regardless of where the BART Downtown Station will be built.

If BART Downtown is built so it begins at Second Street and extends to Fourth Street, my understanding is light rail tracks will not have to be supported or have

service interrupted vs. if the BART station is built under the First and Second Street light rail tracks. If money could be saved by not having to deal with light rail tracks on First and Second Streets, could this money be used to build the underground pedestrian passageway from the Diridon Station to the BART Diridon Station as mentioned above in item 1?

OK . . that's it. Thanks for reading.

Subject:Scoping Topic for BART expansionDate:Thursday, February 26, 2015 8:49:21 AM

Hello,

I am a San Jose resident and have a comment on the upcoming BART stations in the South Bay. These stations are intended to operate as regional transit nodes, so I hope to see strong bike infrastructure in the immediate vicinity of each station. In addition, on-site bike lockers and expanded bike lanes along cycling arteries leading to the BART stations will boost the ease and safety of multi-modal transit in the South Bay.

Thanks for your consideration.

Attn: Tom Fitzwater VTA Environmental Programs & Resources Management, Building B2 3331 North First Street San Jose, CA 95134

Subject: BART Phase II Environmental Scoping

1. General

- 1.1. Consider design interfaces to all other transit options with a focus on reducing duplication; BART, Caltrain, Light Rail, bus routes and future high speed rail.
- 1.2. Consider the value of the maintenance facility vs the cost to build and a review of alternative locations.
- 1.3. Consider the traffic impact of the opening of the Berryessa BART station, prior to the building of the Maybury Road interchange at 101.
 - 1.3.1. Impact on interchange at 101 & McKee
 - 1.3.2. Impact on McKee between 101 & 680
 - 1.3.3. Impact on N. King Road at Silver Creek
 - 1.3.4. Impact on Berryessa between BART station and 680

2. 28th Street / Alum Rock Station

- 2.1. Reconsider the baseline costs for utilizing the rail crossing at 101, ensuring that it includes;
 - 2.1.1. Expanding bridge width for double tracking
 - 2.1.2. Expanding bridge width for pedestrian and bicycle utilization
- 2.2. Consider the impact on development/value capture opportunities related to using the rail bridge route vs the tunnel option at 101.
- 2.3. Consider the impact of using the rail bridge crossing route on the East/West Court neighborhood
- 2.4. Consider the neighborhood traffic impact related vehicle access to Southeast Santa Clara County for Berryessa station riders if;
 - 2.4.1. 28th street is not built (no build option)
 - 2.4.2. 28th street station built with direct 101 access off the existing southbound frontage road
- 2.5. Consider the impact of vibration and noise on the historic Five Wounds church
- 2.6. Consider the impact of vibration and noise on the school adjacent to Five Wounds church
- 2.7. Consider traffic impact on the regional pedestrian trail network.
- 2.8. Consider separate traffic impact studies for Julian and Santa Clara.
- 2.9. Consider other potential site uses when assessing the need for on site parking.
- 2.10. The Final EIR (2004), Section 4.9, clearly shows that Environmental Justice must be considered. Consider the Environmental Justice implications of not including the 28th street station.
- 2.11. Phase II Responses to Community Questions and Comments Set 1 ¹

Question: The 28th Street Station was expected to attract riders from South County and other areas south and east of Interstate 280/680.

Where are those riders expected to go? How will their cars be accommodated? To what extent will ridership of the entire system be lowered by the elimination of a station with easy freeway access and parking structure? How will the lowered overall rider-

¹ See: Phase II Responses to Community Questions and Comments Set 1

ship affect the scoring with the FTA program?

Answer: The concept for the 28th Street station includes limited parking supply due to neighborhood traffic concerns. The remaining potential demand would mostly be accommodated at the Berryessa Station. Berryessa Station is able to provide sufficient parking. Detailed assessment of parking options and ridership will be part of the environmental analysis.

Consider enlarging the parking at the 28th street station to handle all the traffic from the South and to prevent parking overflow into the adjacent neighborhood areas. Given the current morning overload of the 101 offramp to McKee Road and the fact that the proposed Maybury interchange project has not yet passed an environmental review and has no funding, please review previous decisions.

3. Downtown Station

- 3.1. Consider the impact on light rail service of choosing the western option for the downtown station and determine how to mitigate operational impact to the light rail system.
- 3.2. Consider an extended, non-cut & cover station for the downtown, to include entrances at both the city hall / university area and the convention center / entertainment district.
 - 3.2.1. Eliminate disruption that would be caused by digging up light rail tracks and/or one of the main streets
 - 3.2.2. Being easily accessible for a wider number of riders
 - 3.2.3. Opening of access to BART for the two largest population areas of downtown.
- 3.3. Consider the depth of the existing timber pile foundations that are supporting the Coyote Creek bridge under Santa Clara Street near 19th street and VTA's 2007 decision to deviate to the north of the bridge at that location.¹
- 3.4. Consider and clarify impact on bus services in this area during construction.

4. Santa Clara Station

- 4.1. Consider building this as a phase three option.
- 4.2. Consider the impact on ridership demand at the Santa Clara station after the Caltrain to BART connection is achieved at the Diridon station. Compare that ridership demand to the cost of providing BART terminal in Santa Clara.
- 4.3. Consider the impact on ridership demand after Caltrain has been electrified. Compare that ridership demand to the cost of providing BART terminal in Santa Clara.
- 4.4. Consider the cost of the Diridon to Newhall connection for a train storage facility and compare it to cost of upgrading existing BART facilities in Hayward to handle these expanded requirements.
 - 4.4.1. At a recent BART Board workshop, they seemed to give the impression that the Hayward maintenance facility was has the potential to be able to handle all the maintenance requirements, if the Newhall facility is not built.²
- 4.5. Consider the noise & vibration impacts related to the tunnel exit approaching to the Santa Clara station, given all the new and proposed housing in that area.

Thank you for your time and consideration.

Subject: [spam] VTA BART Phase II SEIS/SEIR scoping questions

Date: Friday, February 27, 2015 5:24:45 PM

Below please find my scoping questions and comments for the VTA BART Silicon Valley Phase II Extension Project SEIS/SEIR:

- 1. The EIR should consider distributing VTA BART parking across the 13-acre site of the Alum Rock Station @ 28th Street. The EIR should consider VTA public-private joint development to construct the Five Wounds Village and incorporate shared parking for VTA BART patrons and those who live, work, and visit the village. The EIR should consider shared parking as a way to stage VTA BART parking needs; that is, instead of constructing one parking structure accommodating 1,200 vehicles, parking could be added flexibly until the site is built-out.
- 2. The EIR should consider locating the subway entrances and exits of the Alum Rock Station @ 28th Street symbiotically with the Five Wounds Village, and especially with the town square feature of the village that is planned over the station box. Entrances and exits are envisioned to be built in a way such that VTA BART patrons traverse the town square on their way to or from other modes of transportation; i.e. mass transit, kiss-and-ride area, bicycle lockers, Five Wounds Trail, or parking garage(s).
- 3. The EIR should consider how VTA might use the triangular property that it owns bounded by the former UPRR right-of-way, Lower Silver Creek, and Hwy 101, across the right-of-way from the Kellogg Factory. The EIR should consider at a minimum these scenarios:
 - Develop the land using a high-rise, high-density mixed-use model that could incorporate office, commercial, and residential uses.
 - Develop the land as a BART maintenance and storage facility instead of building a facility for those purposes in Santa Clara.
- 4. The EIR should consider the impact and necessity of constructing a BRT station at 28th Street to interface with the Alum Rock Station @ 28th Street.
- 5. The EIR should consider the impacts of vehicular traffic generated by BART patrons through the established neighborhoods around the Alum Rock Station @ 28th Street. The EIR should propose traffic mitigation scenarios that would minimize impacts to the neighborhoods.
- 6. The EIR should consider how to best move BART commuters from Hwy 101 to parking garages at the Alum Rock Station @ 28th Street. Scenarios that could be considered should include:
 - Routing commuters to and from Hwy 101 using East Julian Street.
 - Routing commuters to and from Hwy 101 using dedicated ramps that would directly connect to the parking garage(s).

- 7. The EIR should consider how to mitigate the impacts of constructing the Alum Rock Station @ 28th Street in terms of noise, vibration, dust, hazardous materials, and all other negative construction impacts on Five Wounds Church and Cristo Rey San José Jesuit High School. Special care must be taken so that the structural integrity of Five Wounds Church is not jeopardized by construction. The EIR should consider specific construction methods that will minimize the negative impacts of construction on Five Wounds Church.
- 8. The EIR should consider the future of the historic railroad trestle over Lower Silver Creek. The EIR should consider how the trestle and the railroad bridge over Hwy 101 will be incorporated into the future Five Wounds Trail that will connect existing trails south of Hwy 280 to the future Lower Silver Creek Trail and other trails north and east of the Alum Rock Station @ 28th Street.

San Jose, CA 95134

RE: Comments Regarding Scoping for BART Silicon Valley Phase II Extension Project

Dear Mr. Fitzwater:

PURPOSE

On behalf of San Jose Arena Management, the purpose of this letter is to identify issues that we believe need to be addressed in the SEIS/SEIR3 for the BART Silicon Valley Phase II Extension Project. Our organization has had keen interest in this project for at least 13 years, and we have submitted the following prior comment letters:

- a) Letter dated March 28, 2002, from Ken Sweezey to Lisa Ives with comments on the scoping process for the original environmental analyses.
- b) Letter dated May 14, 2004, from Jim Goddard to Tom Fitzwater with comments on the Draft Environmental Impact Report for the Silicon Valley Rapid Transit Corridor Project.
- c) Letter dated May 8, 2009, from Jim Goddard to Tom Fitzwater with comments on the Draft Environmental Impact Statement for the Silicon Valley Rapid Transit Corridor Project.

Though many changes have occurred since those letters were submitted, our basic interests remain much the same. We are excited about potential benefits the BART Extension Project can provide for customers attending events at the SAP Center. The planned Diridon Station, together with the broad geographic coverage of the BART system, will significantly improve access for the SAP Center. At the same time, we are concerned about potential negative environmental impacts the project could cause regarding traffic and parking operations for the SAP Center, both upon completion of the project and during construction. If such significant negative impacts occur without mitigation, attendance at our events may sharply decline, which in turn would threaten the fundamental viability of our business. Just as importantly, NEPA analysis focuses on harm in the

fundamental viability of our business. Just as importantly, NEPA analysis focuses on harm in the urban environment and the impact the Project can have on the quality of life in the urban environment. Toward that end, NEPA requires analysis of the impacts of congestion, noise, safety and the impacts on air quality caused by traffic on the quality of life in the urban environment.

We have identified the following six specific issues that we believe the SEIS/SEIR3 needs to address in order to adequately perform its function of determining the potential significant environmental issues that need to be analyzed, identifying areas of controversy, and providing the decision makers with the information they need to make an informed decision:

- Issue A Potential traffic and parking impacts in the Diridon Station area under cumulative conditions
- Issue B– Potential for traffic congestion during the hour of 6:00 to 7:00 p.m.
- Issue C- Potential loss of parking spaces for SAP Center customers due to parking by BART customers
- Issue D- Potential loss of parking spaces for SAP Center customers during construction and plans for replacement parking
- Issue E- Potential negative impacts during construction on access to parking facilities used by SAP Center customers
- Issue F- Potential conflicts during construction between BART Project and new development in the Diridon area

For each of the above six issues, an explanation is provided regarding why this issue is significant, has not been covered by a prior environmental review and impacts the quality of urban life, and therefore needs to be analyzed in the SEIS/SEIR3.

ISSUE A – POTENTIAL TRAFFIC AND PARKING IMPACTS IN THE DIRIDON STATION AREA UNDER CUMULATIVE CONDITIONS

The Diridon Station area is undergoing dynamic and substantial change. Further, major changes have occurred to the pertinent plans and projects since the prior environmental clearances were obtained. For example, environmental clearances recently have been obtained for three major projects affecting the Diridon area:

- Major league baseball stadium
- Diridon Station Area Plan
- Caltrain Modernization Project

Further, work is continuing to develop the Caltrain/HSR Blended System, with this project planned for implementation in 2029.

We believe potential traffic and parking impacts in the Diridon Station area need to be carefully analyzed under cumulative conditions, because the potential for significant negative impacts is much greater when these projects are considered together, than when they are addressed separately. The possible cumulative environmental effects on the urban environment include significant congestion, adverse air impacts, noise, and safety.

ISSUE B – POTENTIAL FOR TRAFFIC CONGESTION DURING THE HOUR OF 6:00 TO 7:00 P.M.

The hour of 6:00 to 7:00 p.m. is the typical peak hour for motorists arriving for weekday evening events at SAP Center. Recognizing the importance of effective traffic operations for SAP Center customers driving to events, the City has analyzed traffic operations during this hour for multiple projects in the Diridon area, including the Diridon Station Area Plan. It is important to determine whether vehicular trips generated by the BART Diridon Station during this hour will cause traffic congestion on any nearby roadways or intersections. The potential overload of traffic during this hour would result in congestion, decreased air quality and safety problems. Accordingly, the issue requires specific study in the SEIR/SEIR3. These issues have not been adequately studied elsewhere.

ISSUE C – POTENTIAL LOSS OF PARKING SPACES FOR SAP CENTER CUSTOMERS DUE TO PARKING BY BART CUSTOMERS

The SAP Center is heavily reliant on off-site parking spaces to fully meet the parking needs of its customers. To that end, an Agreement has been established with the City of San Jose, whereby the City has assured that at least 3,175 off-site spaces will be available for SAP Center customers within 1/3 mile of the SAP Center and 6,350 spaces will be available within ½ mile. This Agreement constitutes a de-facto land use plan developed by the City of San Jose that any BART activity should be consistent with. Any significant parking by BART customers in off-site parking facilities now available for SAP Center could cause a parking shortage for SAP Center customers and a breach of the City's parking commitments for the SAP Center. Such a parking shortage, if it occurs, likely would cause significant safety, noise, and air quality problems due to motorists circulating among unfamiliar streets looking for parking spaces and due to pedestrians rushing from more remote parking spaces to SAP Center.

Fundamental questions that need to be answered for this issue include:

- What is the expected parking demand for the BART Diridon Station, including peak weekday daytime demand and demand at 6:00 p.m. on weekdays?
- How will this BART parking demand be accommodated?

 To what extent will parking for BART customers impact parking spaces available for SAP Center customers?

ISSUE D – POTENTIAL LOSS OF PARKING SPACES FOR SAP CENTER CUSTOMERS DURING CONSTRUCTION AND PLANS FOR REPLACEMENT PARKING

Staging areas needed for construction of the Diridon Station likely will displace up to 635 parking spaces south of West Santa Clara Street between Autumn Street and the railroad tracks. Such a loss of parking spaces would have severe negative impacts as described under preceding Issue C, and thus this issue needs to be addressed in the SEIS/SEIR3. To avoid a significant loss of parking spaces for SAP Center customers during construction and the associated negative impacts, we believe that during each stage of construction for the Diridon Station, the number of parking spaces lost needs to be determined, and that a mitigation plan needs to be developed to provide the same number of suitably convenient replacement spaces.

ISSUE E – POTENTIAL NEGATIVE IMPACTS DURING CONSTRUCTION ON ACCESS TO PARKING FACILITIES USED BY SAP CENTER CUSTOMERS

A system of streets and driveways now is available to provide effective ingress and egress for parking facilities that serve SAP Center customers. At any point during construction of the BART Diridon Station, will any streets or driveways be closed that would hinder ingress or egress for SAP Center customers? If so, what alternatives or mitigation measures will be implemented to avoid significant negative impacts?

ISSUE F – POTENTIAL CONFLICTS DURING CONSTRUCTION BETWEEN BART PROJECT AND NEW DEVELOPMENT IN THE DIRIDON AREA

The Diridon Station Area Plan anticipates extensive new development in the area south of Santa Clara Street in the next 10 years. A critical premise for these projections is that the BART Diridon Station box will be constructed early enough within this 10 year period for new development to occur above the station box. How will BART construction plans be coordinated with Diridon development plans to avoid conflicts between these projects?

CONCLUSIONS

Based on the above comments, we respectfully request that all six issues addressed in this letter be thoroughly analyzed during the process to prepare the SEIS/SEIR3 for the BART Silicon Valley

Phase II Extension Project. We appreciate your consideration of this request and look forward to further participation in the process to prepare this SEIS/SEIR3.

Sincerely,

Subject: Scoping Comments

Date: Sunday, March 01, 2015 1:36:50 PM

Mr. Fitzwater:

I am submitting these scoping comments on behalf of the Friends of BART Alum Rock @ 28th Street.

The EIR should consider how many more jobs will be accessible to low-income residents of the Alum Rock and East-of-Downtown areas within a 45-minute transit commute by the construction of a station at Alum Rock and 28th Street.

The EIR should consider the cost per rider of a station at Alum Rock/28th Street versus the cost per rider of a station in Santa Clara (plus the cost of extension to Santa Clara).

The EIR should consider that the ridership estimate for a Santa Clara station maybe be inflated, given access to CalTrain.

The EIR should consider alternatives to a billion dollar maintenance facility.

The EIR should consider value capture as a potential funding source.

The EIR should consider potential ridership coming to Little Portugal and the Church of Five Wounds as a destination.

The EIR should consider ridership from people who walk or bike to the Alum Rock/28th Street station when the Three Creeks and Five Wounds Trails are completed (both are in the current general plan for the City of San Jose).

Thank you for your consideration.

Subject: Public comment re BART extension

Date: Monday, March 02, 2015 2:59:43 PM

Attn.: Tom Fitzwater VTA Environmental Programs & Resources Management, Building B-2 3331 North First Street San Jose, CA 95134

Dear Sir:

I suggest and request that the original proposal, which is BART to Santa Clara, be modified as follows:

- 1) The most direct line between Great Mall and downtown San Jose should be used, with an intermediate station placed about half way, for these reasons:
 - The most efficient rail system is where the train lines are straight. Detours always add to travel time the main criteria whether a person will use transit and they add to operational costs and capital costs. The tragedy of publicly-owned public transit is that new rail lines are zig-zagged and detours are placed for political reasons. Politicians want a station put in their neighborhood. High Speed Rail got detoured to the Mojave desert because land was bought cheaply for a future new city around a station. But the rail system becomes inefficient for the majority of users, including those going from San Jose to LA, or San Jose to East Bay.
 - People living in the East Side would not want to transfer from a bus for a short BART ride to downtown.
 - People in East Side wanting to go to Milpitas or work in industry already have the light rail line which will be extended further south along Capital Ave.
- 2) Eliminate the extension beyond Diridon Station. I live 1.3 miles form the Santa Clara train station. If I go to downtown San Jose, it would not make sense for me to get off the #522 bus and transfer to BART for the short ride into downtown. If I go to Milpitas or further north, I would go north of the airport. I would not want to make a detour to downtown San Jose or East Side, San Jose. It's in the wrong direction. The reason that BART was originally proposed for Santa Clara (and also Millbrae) was entirely political to have BART replace Caltrain by building a parallel starter line quickly. Consider that BART has now abandoned their brand new rail line that once ran between Milbrae and SFO, due to lack of patrons. This may also happen at Santa Clara station. BART to Santa Clara would only make sense if (1) the line is extended along El Camino to Palo Alto and (2) the technology of BART invented in the 1950s and 60s would still be worth using in the future for a completely new rail line.
- 3) The Great Mall rail yard should be used for BART. I heard repeatedly that the rail yard at Santa Clara is needed for the BART extension, but I never heard VTA give any mention of the rail yard that extends between Great Mall and Calaveras Blvd. It is bigger than the one at Santa Clara, and is mostly unused due to closure of the automobile plant that became Great Mall. (The Tesla automobile plant in

Fremont has its own rail yard that is even bigger, and is also very under-utilized.) The track count for the Santa Clara rail yard is 8 and for Great Mall is 24 tracks in parallel.

Sincerely,

Subject: West Parking Option on the Alameda - BAD LOCATION

Date: Monday, March 02, 2015 3:25:25 PM

To whom this concerns:

I just heard about this parking structure last week and can't believe that whoever planned this thought it was a good location compared to the EAST Parking Option on Coleman Avenue. Coleman Avenue allows greater access from the Freeway either directly off of Highway 880 or Highway 101 coming from De La Cruz as well as greater access to the San Jose Airport. To get to the WEST Parking Option from Highway 880 you have to take the Alameda and travel at least a mile or more, along a rather narrow and curvy road (compared to Coleman Ave), near **single-family neighborhoods** to the west. The neighborhood to the west would be **severely impacted** by cars cutting through the neighborhoods to gain access to The Alameda and the parking structure from Layfeyette/Scott and Steven Creek Blvd. The EAST Parking Option on Coleman is a much better suited to handle the steady flow of traffic that would be using the parking for BART. Please do not build the WEST Parking Structure, when the EAST Parking Structure makes better sense!

Subject: Scoping comment

Date: Monday, March 02, 2015 3:08:52 PM

Hello:

For more than 15 years, BayRail Alliance has expressed concerns and opposition to this project. We believe that VTA's obsession to extend BART not only has delayed and forgo other transit projects contained in the 2000 Measure A (Caltrain electrification, East San Jose light rail), but threatened basic bus service in Santa Clara County. For many years, VTA has not been truthful in presenting a realistic plan to fund BART.

We also believe the proposed technology and alignment are not appropriate for the corridor. Unlike standard gauge tracks, legacy BART technology does not allow the tracks to be used by other trains that are already operating in Santa Clara County. The alignment also skips the San Jose Airport and the North First Street area slated for higher density developments. Our alternative, Caltrain Metro East (http://www.bayrailalliance.org/caltrain metro east) addresses the problem. Even if the legacy BART technology is chosen for the CME alignment, we believe that would cost less and perform better.

The cost of tunneling has risen dramatically during the last 15 years. We believe that any alternative should reduce or have no tunneling to lower cost. The recent experience in Downtown San Francisco with the Central Subway construction also indicate that there will be significant traffic and business impact associated with construction. Businesses and residents are negatively impacted in the Warms Springs/Milpitas area because of long term road closures caused by BART construction. Communities suffer when they choose not to carefully review the projects because they are considered politically popular.

We would like VTA to study the following:

- Variant of the Caltrain Metro East alignment, either with a BART spur or standard gauge (LRT or Caltrain/HSR) connecting San Jose Diridon, SJC, North 1st Street, and Milpitas.
- Variant of the CME alignment with a station (alternative to San Jose Diridon) located adjacent to Highway 87.
- Light Rail on Santa Clara Street/Alum Rock Ave with spur to Berryessa BART.
- Dedicated bus ramps from 101 and Santa Clara Street along the rail ROW to Berryessa BART to provide enhanced BRT service.

Many rail systems in the United States and around the world operate rail lines that physically cannot inter-operate, but from the customers' perspective is a single system due to seamless transfer and common ticketing. BART is also expanding beyond its legacy system with e-BART and recently opened OAC with alternative technologies, but continues to offer seamless transfer and common ticketing. Light Rail and Caltrain/HSR technology in one sense is not BART because it is not a legacy BART, but if it were to provide seamless transfer and common ticketing, it can be BART. The definition for what is considered BART should be widened. Not only this would result in a better project, but a necessity to improve transit connectivity and usage on a broader scale since Caltrain and VTA Light Rail already covers a significant portion of the county.

We believe that planning and approval for any BART extension beyond Berryessa should be done after the opening of the Berryessa extension. Recent history shows there are discrepancies between projected ridership and actual ridership. By waiting until the Berryessa Station opens, we can better gauge actual reactions from commuters and plan according to actual data.

Andy Chow President BayRail Alliance

Mr. Tom Fitzwater Environmental Programs and Resources Management, Bldg B-2 Valley Transportation Authority 3331 North First Street San Jose, CA 95134

UTA ENVIRONMENTAL

2015MAR02 pm04:24

Dear Mr. Fitzwater:

I am writing to provide comments for the scoping of the Environmental Impact Report of the VTA BART Silicon Valley Phase II Extension Project. My comments focus on the area surrounding the proposed 28th street station.

- The EIR should consider renaming this station to Five Wounds so that all users better understand the location of this station, as it will not be on Alum Rock Avenue, nor 28th street or even Santa Clara Street.
- The EIR should consider use of all the area south from Julian to Five Wounds Lane, and from the 101 west through the UPRR right of way as the development site, whether for parking or for other BART related development (see the Five Wounds village plan.)
- The EIR should consider joint development of the ground level (and above) so that the station access does not restrict the development of the site for use other than parking.
- The EIR should consider future development of the 28th street station ground (and above) for a transit oriented community such as the Five Wounds village plan adopted by the city of San Jose and incorporated into their General Plan
- The EIR should consider the impact of multiple parking facilities (perhaps developed over time) versus a single parking lot at this location. Additionally, should consider multilevel parking versus single level parking at this location.
- The EIR should consider BART related use of the VTA owned parcel across the UPRR ROW from the Eggo plant. One possible use is as a maintenance facility, rather than the Newhall site in Santa Clara. Together with the land across the 101, between Mabury Road and the eastern underground portal, perhaps overnight storage of BART trains is possible here rather than at Newhall.
- The EIR should consider methods to mitigate the impact of traffic exiting from 101 to access BART at both 28^{th} street and Berryessa stations on the neighborhoods around 28^{th} street station.
- The EIR should consider methods of enhancing the use of alternative transportation to reach the station at 28th street (i.e. walking, biking, etc.)

- The EIR should consider how to improve the pedestrian access to the 28th street station, especially from across 101 on Julian/McKee and Santa Clara/Alum Rock.
- The EIR should consider the option of an elevating BART through San Jose rather than tunneling.
- The EIR should consider stopping the BART at the Diridon station rather than continuing on to a Santa Clara Newhall facility.
- The EIR should consider the use of DMUs for the segment from the Diridon station to a Santa Clara station (and beyond in both directions, perhaps Blossom Hill to Alviso via Levi's Stadium.)
- The EIR should consider the impact of adding a BRT stop at 28^{th} & Santa Clara, enabling closer connection with BART via this transportation mode.
- The EIR should consider the development possibilities of the UPRR ROW north of Julian, through to Berryessa. This should include the Five Wounds trail development along this route as well as additional development.
- The EIR should consider the possibility of not using cut-and-cover for the development of the the under ground stations. This may reduce the disruption of neighboring activities for the duration of station construction.
- The EIR should address the environmental impact of construction and operation of BART on Silver Creek as it is in the path of the trains. This should include the impact on the wildlife which uses this waterway as a feeding and resting place, especially during migratory seasons.
- The EIR should consider ways to preserve and maintain the historic trestle railroad bridge over Silver Creek, north of Julian
- The EIR should consider mitigation of impacts on the Anne Darling school, especially during construction, but during operation as well. This is just one block from the proposed eastern underground portal.

Thank you for considering my comments during this process. I look forward to continued involvement in the process of bringing BART to San Jose.

Sincerely,

David Dickey

Subject: Phase II EIS-EIR questions and comments

Date: Monday, March 02, 2015 1:23:00 PM

- The EIR should consider that any above-ground development in which VTA is a party at the Alum Rock Station @ 28th Street must follow the City of San José approved Five Wounds Village Plan.
- 2. The EIR should consider incorporating City of San José right-of-way in and around the Alum Rock Station @ 28th Street into plans for the BART station area. The current street and sidewalk configuration may not lend itself to optimal design and construction of the BART station area and Five Wounds Village. This comment specifically addresses the right-of-way of Five Wounds Lane, N. 30th Street, and E. St. James Street east of N. 28th Street.

Subject: BART Silicon Valley Phase II EIR/EIS Scoping comment

Date: Monday, March 02, 2015 3:16:30 PM

I'd like to be sure that the EIR/EIS considers changes in the segment between the proposed Santa Clara and Diridon BART stations that have taken place since the proposed BART route and station sites were initially studied many years ago. Specifically, with upcoming Caltrain electrification and Caltrain's corresponding planned service increase to Santa Clara station, does it still make sense to make the investment to run BART all the way to Santa Clara, or would it be more costeffective to end the line earlier with Diridon being the last station? What are the tradeoffs involved?

Thank you for your consideration.

Subject: BART Phase 2 EIS-EIR comments

Date: Monday, March 02, 2015 4:50:03 PM

Attn: Tom Fitzwater

VTA Environmental Programs & Resources Management, Building B-2

3331 North First Street San Jose, CA 95134

Dear Mr. Fitzwater, VTA staff and board,

The many decades long vision of a ring of rail around San Francisco Bay is on its way to being fulfilled with the next phase of BART to Silicon Valley.

The project was originally funded in a ballot measure in 2000. Many things have changed in the last 15 years since the project was first conceived, and even in the last few years since the environmental documents were last refreshed. The environmental review process needs to study project options that are relevant in today's world, and analyze the benefits and impacts based on current conditions and expected trends.

Here are comments on changes that have occurred in the project context, and set of questions to address in the environmental review process.

San Jose General Plan - Urban Villages

Since the plan was first conceived, San Jose conducted a major update of its General Plan, Envision 2040 that was adopted in 2011. The General Plan included ambitious goals to evolve the sprawling city, focusing jobs and housing growth in "Urban Villages", and greatly reducing the share of driving.

- San Jose has recently completed a plan for the Diridon Station Area, which depends on service by BART and Caltrain to achieve its transportation goals.
- The Alum Rock area was the focus of the city's first Urban Village plans, created in a process that was strongly supported by local residents.

The Alum Rock station would serve a lower-income neighborhood. GIS analysis indicates that a station at Alum Rock would provide access to more than double the jobs within a 45 or 60 minute commute for East San Jose residents near the station, greatly increasing economic opportunity for residents.

For an interactive view of the GIS analysis regarding the opportunities provided by the Alum Rock station, see: http://cloud.ianrees.net/traveltime/bartsjx

Caltrain ridership increase and electrification.

Since the BART-Silicon Valley was funded in 2000, Caltrain ridership has well over doubled. The introduction of the Baby Bullet in 2004, which made the train faster than driving, helped drive a rapid and continuing increase in ridership. Average weekday ridership so far in FY 2015 has been nearly 60,000.

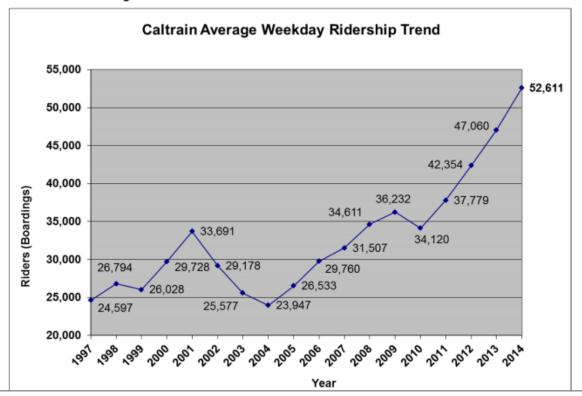

Figure 1: CALTRAIN ANNUAL WEEKDAY RIDERSHIP TREND

Caltrain electrification has been funded with contributions from local, regional, and state sources and the project is scheduled to be complete in 2020/2021, before BART will reach San Jose.

Caltrain electrification is expected to result in even faster, more frequent service, including increased service to the currently lightly-served Santa Clara station, and Caltrain will be better able to support close schedule connections with BART service at Diridon.

Even with the current Caltrain schedule, a massive investment in a BART station in Santa Clara will provide minimal additional access to jobs in Santa Clara job centers, over the access provided by Caltrain today.

California High Speed Rail.

Since the BART Silicon Valley plan was conceived and last studied, the California High Speed Rail project has been funded; the first segment has broken ground; and a plan for a "blended system" with Caltrain has been adopted to serve San Jose to San Francisco.

With High Speed Rail added into the mix, the Diridon Station will be even more of a major regional transit hub. Connections to San Jose International Airport, which were considered from the Santa Clara station years ago, may be better suited for Diridon.

Platform compatibility between High Speed Rail and Caltrain, may create opportunities for designs for the Diridon Station that provide better transit connections, and have more economic development value for the city.

Transbay and the Downtown Extension

The Transbay Terminal is under construction in San Francisco, and is planned to serve Caltrain and High Speed Rail. The Downtown Extension project to connect Caltrain from its current stopping point at 4th and King to the Transbay terminal is not yet fully funded, but a funding plan includes contributions from High Speed Rail and major new buildings that are currently being build around the station. When complete, the Downtown Extension will provide a one-seat ride between San Francisco's financial district and downtown San Jose.

Questions for environmental review

Given all of these changes, here are questions to review for the Environmental Impact Report:

- 1. Assume it is possible to create a 5-minute transfer from BART to Caltrain at Diridon. What will be the difference in ridership, if those riders are provided a one seat ride to Santa Clara, rather than if they need to make a 5 minute transfer at Diridon.
- 2. What would the impact be on Santa Clara station ridership, assuming that Caltrain can provide four trains per hour at peak, and the BART Santa Clara station is deferred.
- 3. How many more jobs are accessible to low-income residents in the Alum Rock area, within a 45 minute and 60 minute transit commute, if a station is added at Alum Rock.
- 4. The cumulative section of the EIR should include the Downtown Extension to Transbay. For a passenger starting at Diridon station, how long will it take for them to get to Montgomery BART station at a peak travel time if they head "left" via Caltrain, or "right" via BART
- 5. Study alternative locations for train storage and maintenance and train reversal for the BART Silicon Valley extension if the Santa Clara extension is not built in this phase
- 6. If the Santa Clara extension will not be built in this phase, study alternative locations for an additional station that do not duplicate existing backbone rail service.
- 7. With platform compatibility between Caltrain and High Speed Rail, it may be possible to create a more compact, cost-effective station that leaves more land for economic development. Is it possible to add additional transit facilities or buildings above the BART terminus?
- 8. The City of San Jose has initiated a study evaluating alternatives to provide a connection from Diridon Station to San Jose International Airport. In a cumulative scenario including high speed rail, compare the airport connection ridership between SJC and Diridon, and ridership between SJC and Santa Clara.

Thank you very much for moving this project forward, and for considering the benefits and impacts based on current information and plans about transportation and land use in the project corridor.

Thanks,

Adina Levin

Subject: BART Silicon Valley Extension Phase II comment

Date: Monday, March 02, 2015 10:37:31 AM

Mr. Fitzwater,

I wanted to express my continued support for the construction of the BART extension that would continue from the currently under construction Berryessa station though central San José to a terminus at Santa Clara.

I have one question/concern—I would like to know what possibility there is for any of the proposed parking structures to be built underground, instead of having them use up valuable developable land above ground.

If it is not possible (logistically or financially) to place the parking underground, what will VTA and BART be doing to make sure that the parking structures are situated in a way such that the area facing city streets will be utilized for retail, office, or residential uses? I hope that parking is considered an ancillary use that should be hidden away so it doesn't disrupt a quality future streetscape.

Thank you, Geoffrey Hatchard 153 S. 23rd Street San José, CA 95116 hatchard@gmail.com From: <u>Jaime Fearer</u>
To: <u>bartphase2eis-eir</u>

Subject: BART Phase 2 Scoping Comments

Date: Monday, March 02, 2015 11:00:47 AM

Mr. Fitzwater,

I wanted to express my continued support for the BART Silicon Valley Phase II Extension Project. In response to the scoping meeting I attended on February 19, 2015, I have the following comments:

- It is imperative that all four (4) of the originally proposed Phase II stations be included in the updated SEIS/SEIR3 Alum Rock, Downtown San Jose, Diridon, and Santa Clara are vital connections for a more complete, sustainable rail transit network in the South Bay and across the Bay Area at large.
- Be sure to consider pedestrian and bicyclist connects at all stations; without them, we will lose the opportunity to create significant mode-shift out of single-occupancy cars, and we will face the burden of costly retrofit in later years.
- Additionally, consider connections for our seniors and people with disabilities.
 Of course ADA requirements will be a part of the process, and I would like to
 see VTA go beyond the minimum as we look to a not-too-distant future where
 our senior population triples while at the same time desires to age in place and
 remain independent. Accessible transit is key to healthy, intergenerational
 communities.
- For the downtown station, the eastern alignment appears to make the most sense in terms of activity nodes it is directly adjacent to City Hall, and would connect easily with a direct walk to San Jose State University.
- In thinking toward the future, please consider underground parking structures at the stations. By doing so, we will better ensure the success of true Transit-Oriented-Development by not using the land for parking, and instead providing the opportunity for mixed-uses.
- Continue to be cognizant of rising housing costs and the real potential for displacement along and near the future BART corridor, and how the community and the city can work together to mitigate the negative consequences. Please provide current analyses and future projections of housing and commercial costs. Please also take into account that the market will not necessarily wait for the rail to be built, and that real estate speculation along the corridor is likely to start years in advance of construction or its completion, and that we must be working on this now.

I thank you for your time and dedication to the planning process.

Sincerely, Jaime Fearer

Subject: Alum Rock, Santa Clara, and SJC Airport stations

Date: Monday, March 02, 2015 2:09:43 PM

VTA needs to better study stations in three locations - the proposed Alum Rock station, the proposed Santa Clara station (next to the Downtown of that city and the University), and at the San Jose Airport.

First off, I am appalled that the initial plans for this Phase 2 did not include a station at Alum Rock, when the city of San Jose has recently planned an Urban Village there that is dependent on the BART station to make it work. So this study definitely needs to be updated to reflect what is currently known about the Alum Rock station area (not just what was known about it in the year 2000).

Also, I have to question where the terminus for this Phase 2 will be located, for several reasons.

- It duplicates a segment of CalTrain that will be much better utilized due to recent developments, such as electrification of CalTrain, than was known in the year 2000. These developments will make the already-existing CalTrain line more appealing than the new, but expensive, BART line for this segment.
- A direct link between Diridon and the San Jose International Airport has become much more talked about recently and more recognized as a necessary thing to meet future travel needs. I see no reason why San Francisco can have such a link, via BART, but San Jose cannot. This link will be much easier to provide if the Santa Clara (city) station is not built. In fact, one more thing this study needs to provide, but doesn't, is a comparison between the number of people who would use the Santa Clara (city) BART station vs. the number of people who would use a station at one of the Terminals of the San Jose International Airport if BART went there directly from Diridon.

So, as you can see, there are many ways that this study needs to be updated, and several of these revolve around the issue of what was known in the year 2000 vs. what is known now, in the year 2015.

Staff of Mayor Sam Liccardo, City of San Jose

Via Email

Mr. Fitzwater, General Manager Fernandez, and other interested persons:

Greetings from the Newhall Neighborhood Association, a community organization dedicated to building community and encouraging responsible development in the western gateway to central San José. Our approximately 3,000 residents inhabit the geographic area bounded by Coleman Ave, Interstate 880, Park Ave, and the City of Santa Clara border. The Caltrain corridor, future VTA BART corridor, and California Highway 82 are central to our community.

We write today with several scoping questions and statements related to the VTA BART Silicon Valley Extension, Phase II. To facilitate your reply, we use bullet points rather than a continuous narrative.

Requests:

- We request the study of alternative tunnel opening locations as the trains leave downtown San Jose toward Santa Clara and approach the Newhall Yard. We request a study of a tunnel location south/east of I-880 to avoid I-880 bridge footings and residences along Campbell Avenue.
- We request a study of less costly alternatives to creating a maintenance facility at Newhall Yard and tunneling approximately 1.5 miles from Diridon to Newhall Yard.
- We request a study of alternative locations between Warm Springs and Diridon stations to store 100-200 BART cars.
- We request a study of the feasibility of doing all South Bay maintenance at the Hayward facility and the ability to build the complete passenger service at a lower total construction budget than would be required to also build the proposed maintenance yard in the Newhall site. How many years would it take to justify the incremental capital cost of building a Newhall Yard maintenance facility?
- We request a study of the cost of deadheading from an Alum Rock storage facility to the Diridon station, compared to the cost of tunneling from Diridon to Santa Clara.

- We request a study of the cost of a sound absorbing barrier between the Newhall Yard tunnel opening and the residences along Campbell Avenue. As an example, the cost of conducting all operations, including washing and any other loud operations, in a completely enclosed environment
- We request a study of the disposition of the Newhall Yard property to developers who might have interest in intensifying development along the Coleman Ave corridor (residential, commercial, or mixed use).
- We request a study of an underground alternative that runs from Diridon Station directly to San Jose International Airport.
- We request a study of vehicle (VTA buses, trucks, and autos) circulation for both the West and East Santa Clara Parking Structures.
- We request a study separating bus and non-bus Santa Clara station access points. How will VTA bus route operations (run/trip time, vehicle accident frequency, pedestrian/bus patron safety etc) and automobile access time improve if the east side served primarily automobile traffic (east side parking structure, kiss n ride and potential future bus route) and the west side served primarily as the bus access point (ECR BRT, 22, 522, 10, 60, 81 and potential future route and kiss and ride).
- We request a study of the Santa Clara station revenue generation for a west parking structure and east parking structure. What will be the revenue generation for each parking structure from the sports stadium at 1123 Coleman Ave? The parking at the stadium will be \$20-30 per vehicle per event.
- We request a study of the travel time from I-880, US101, and CA-82 to the west and east parking structures. How will a four lane profile on CA-82 near I-880 affect travel time? How will the new Coleman Interchange and 6-lane profile on Coleman Ave affect travel time? How will the one lane circuitous "ramp" through the De La Cruz interchange affect access from US-101 and CA-82?
- We request a study of the effect of a Santa Clara station west parking lot, with its 500+ automobile trips inbound and 500+ outbound trips, on the region's (lead by VTA) attempt to create a successful transit oriented "Grand Boulevard" from San Jose to San Francisco?

Questions:

- If a maintenance facility must be built in Santa Clara, what is the bare minimum that can be accomplished in that facility, noting that residential uses are within a few tens of feet to a few hundred feet? What mitigations can be implemented to minimize the work done between 5pm and 9am, and also specifically to minimize noise-causing work between 5pm and 9am?
- What will be the hours of the day when loudspeakers and other amplified sound (including train horns) would be audible in and around the Newhall Yard site and Santa Clara station?
- What kind of train movement could be expected from the scale of facility proposed for the Newhall Yard? When would the earliest trains operate? When would the latest trains operate? How many at various times of day, including movements for Yard work and repositioning?
- What consideration in regard to Newhall Yard noise and hours of operation will you give future Santa Clara residences and businesses in light of the Santa Clara 2035 plan to create a large high density downtown centered around the Santa Clara (Caltrain and BART) station?
- How will VTA and the City of San Jose manage parking for the Avaya Stadium Events?

- How will VTA and the City of San Jose manage parking for the Coleman Ave recreational soccer fields project currently under construction?
- How will the west side of the Santa Clara station VTA bus routes (ECR BRT, 22, 522, 10, 60, 81 and future routes) be affected within, near and adjacent to the west side of the Santa Clara Station when there are 500+ daily inbound and 500+ daily outbound vehicles converging on Benton and Railroad Ave, the BART and Caltrain station vehicle access points.
- How will future east side of Santa Clara station VTA bus routes (currently the 10 and 304 routes traverse Coleman Ave) be affected within, near and adjacent to the east side of the Santa Clara Station when there are 500+ daily inbound and 500+ daily outbound vehicles converging on the yet to be built access road off Coleman Ave.

We look forward to your feedback regarding this important project.

Sincerely,

John Urban

Subject: Attn: Tom Fitzwater: BART Phase II comments

Date: Monday, March 02, 2015 2:51:15 PM

Attn: Tom Fitzwater:

Below you will find my comments on the Phase II BART Silicon Valley project.

- An eight-level parking structure at Diridon sounds unnecessarily large. VTA should coordinate with the high speed rail authority and Caltrain to design an integrated structure that meets existing and foreseen needs for *all* Diridon tenant operators, not just BART. VTA should avoid a repeat of the Millbrae parking situation, which features segregated BART and Caltrain parking and excessive over-provisioning of BART parking capacity.
- Instead of turning BART service north at Diridon and duplicating existing rail service, VTA should study a westward Stevens Creek Boulevard alignment for service to Santana Row, Harker, Cupertino High School, *Apple*, and De Anza College, with a future option to extend this new rail right-of-way along existing Vasona / Foothill Expressway right-of-way.
- Duplicate Caltrain and BART service along the several mile segment between Santa Clara station and Diridon is wasteful, especially in light of Caltrain's impending electrification. It's a waste of scarce transit capital dollars to build two electric railroads next to each other. It would be much cheaper to use some of these funds for capital to support all-day 15 minute Caltrain service and coordinate a convenient transfer at Diridon; this would be more convenient for passengers traveling to points north of Santa Clara.

Thank you,

Peter Johnston

Subject:SVBX Phase II SEIR scoping commentsDate:Monday, March 02, 2015 1:03:53 AMAttachments:SVBX Phase II SEIR scoping comments.pdf

Dear Mr. Fitzwater,

Please find attached my SEIR coping comments.

Sincerely,

Roland Lebrun

Tom Fitzwater
VTA Environmental Programs & Resources Management,
Building B2,
3331 North First Street, San Jose,
CA 95134
BARTPhase2EIS-EIR@vta.org

Dear Mr. Fitzwater,

Thank you for the opportunity to comment on the Silicon Valley BART Extension (SVBX) Phase II SEIR as follows:

1. Stations

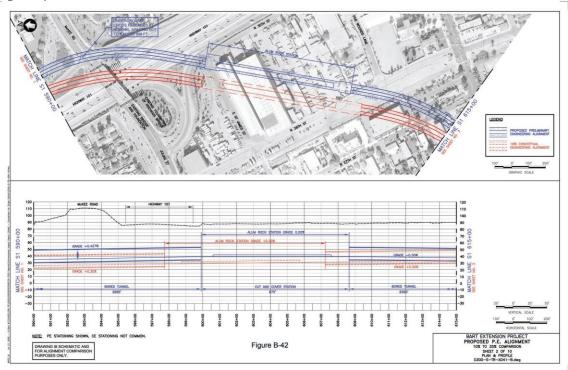

1.1 Alum Rock

1.1.1 23rd Street alignment

- The 23rd Street alignment should be dropped from the SEIR

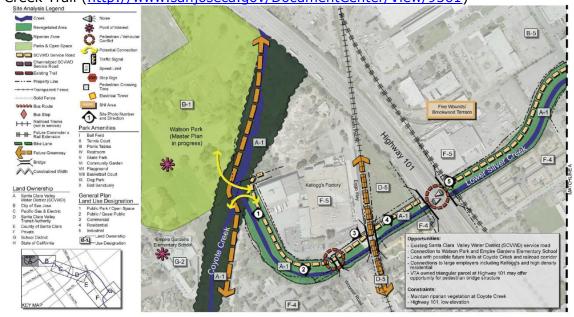

1.1.2 28th Street diagonal alignment

The SEIR should consider the environmentally cleared village plan for the 28th Street BART station starting with the tunnel portal on Las Plumas and the tunnel under Highway 101.

1.1.2 28th Street alignment using UPRR bridge over 101 Should the SEIR retain the 28th Street alternative, the following impacts should be analyzed and mitigated:

- Loss of north/south bike/ped access across Highway 101 on former UPRR bridge
- Permanent loss of Lower Silver Creek historic trestle
- Break in SCVWD right of way along Lower Silver Creek
- Conflict with the December 2007 environmental clearance for the Lower Silver Creek Trail (http://www.sanjoseca.gov/DocumentCenter/View/9361)

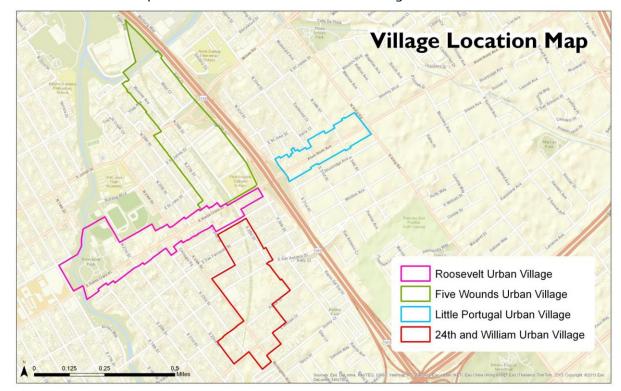

- Biological impacts on Lower Silver Creek
- Permanent loss of access (landlocking) of VTA triangular parcel on Eggo Way (northern most tip of 5-wounds Village Master Plan) and **potentially significant loss of value capture** (subject to re-/upzoning).

Lake Merritt Apartments

- Significant impacts on the Rocketship school on Wooster Avenue
- Significant loss of value capture north of East Julian Street
- Significant construction impacts on McKee Road (cut & cover underpass)
- Potential tunnel impacts on 24th and William Urban Village

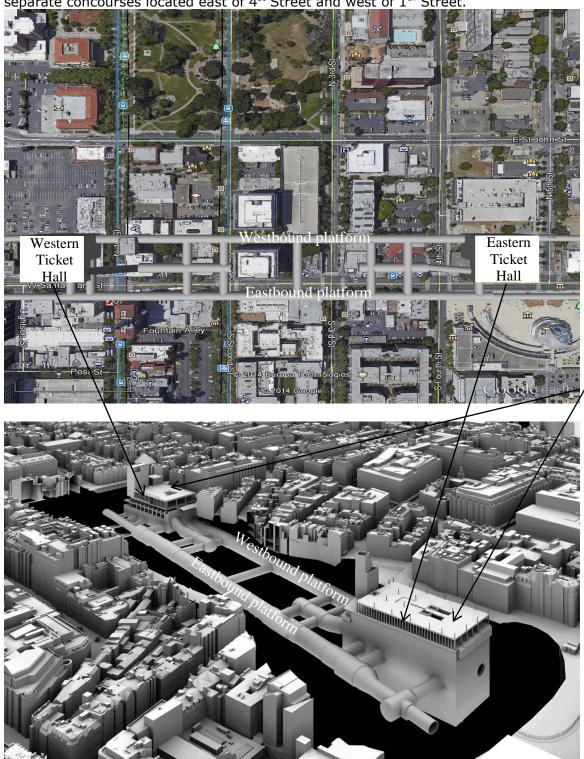

The SEIR should consider silent and vibration-free construction methods in the vicinity of the 5-wounds church: https://www.youtube.com/watch?v=M5FqzeV_bC0.

The SEIR should consider building a multi-story parking structure above the southbound 101 on/off ramps @ McKee.

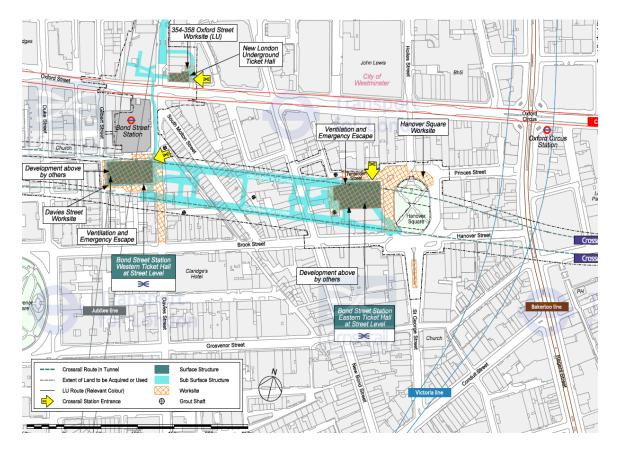

The SEIR should consider multiple parking structures at different levels with entrances designed to keep traffic originating from McKee and East Santa Clara away from the village core.

1.2 Downtown

The SEIR should consider a mined Downtown station alternative designed to mitigate construction impacts on East Santa Clara and to enhance connectivity between BART and VTA light rail and buses, City Hall, the MLK library and San Jose State via separate concourses located east of 4st Street and west of 1th Street.

P3 opportunities (additional stories)

The SEIR should fully consider the economic and socio-economic impacts of a downtown cut & cover station under East Santa Clara.

The SEIR should not consider adding any additional parking in the immediate vicinity of the Downtown BART station and should analyze traffic impacts accordingly.

The SEIR should consider deterrents to discourage BART riders from driving to the Downtown station as well as incentives to use public transit alternatives or drive to other BART stations.

1.3 Diridon

1.3.1 Capacity

- The SEIR should consider a complete redesign of the Diridon BART station box with central tracks and separate eastbound and westbound platforms designed to preempt future congestion requiring capacity enhancements at a later date (current estimate at Montgomery and Embarcadero stations: \$900M).

1.3.2 Multimodal Transit Integration

- The SEIR should evaluate and quantify the benefits of seamless transfers between transit modes by considering an alternate design that would slide the BART station box under the railway station throat thereby integrating the BART concourse with the northern concourse of the future underground HSR station.
- The SEIR should consider relocating the Diridon VTA light rail to the east (front) of the railway station, preferably at the same level as the BART concourse, thereby contributing to the light rail efficiency program by consolidating the existing Diridon and San Fernando stations into a single station.

Redesigned station throat

Additional (fourth) track

Relocated light rail station

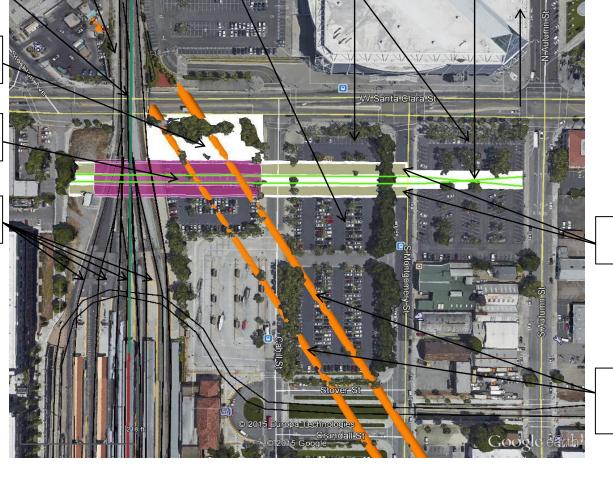

Potential bus station locations

Relocated Stockton crossover

HSR North Concourse

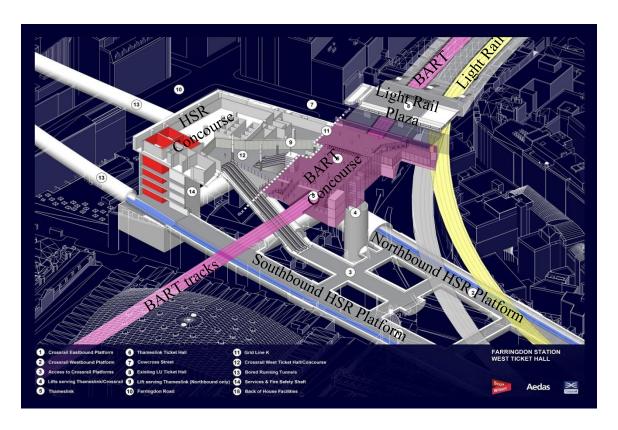

BART Concourse

Extended platforms

BART platforms

HSR platform tunnels

BART concourse

LA Union Masterplan (Grimshaw/Gruen architects)

The SEIR should consider every opportunity to mitigate or eliminate construction impacts on the activities at the SAP Arena.

1.4 Newhall Heavy Maintenance Facility

- The SEIR should consider a phased implementation alternative whereby the Newhall Yard and tunnels would be built in a later phase as and when funding becomes available.
- The SEIR should consider relocating the Stockton crossover east of the relocated Diridon station box (see relocated station box diagram in section 1.3.2 above).
- The SEIR should consider relocating the heavy maintenance facility and storage tracks to Phase 2 of the Hayward Maintenance Complex (HMC) and rezoning the land between the Union Pacific tracks and Coleman Highline for retail and high-density Transit-Oriented Development (TOD).
- The SEIR should consider the impacts of a heavy maintenance facility in the vicinity of the San Jose Earthquakes Stadium, including noise, pollution, vibrations, environmental impacts and the negative effects on adjacent property values including the impact on property and sales tax revenues and the potential for a Transit Benefit Assessment District (TBAD) around the Santa Clara station.
- The SEIR should also consider the cumulative impacts on the potential value capture and TOD potential of the Caltrain Centralized Equipment Maintenance & Operations Facility (CEMOF) after it is relocated and vacated by Caltrain.

1.5 Santa Clara Station

- The SEIR should consider a phased implementation alternative whereby the Santa Clara station would be built in a separate phase.
- The SEIR should consider leaving sufficient space for an additional track for the Capitol Corridor double-tracking project (and a northbound platform accessible via the Santa Clara pedestrian underpass extension) between the UPRR tracks and the future Santa Clara BART station.

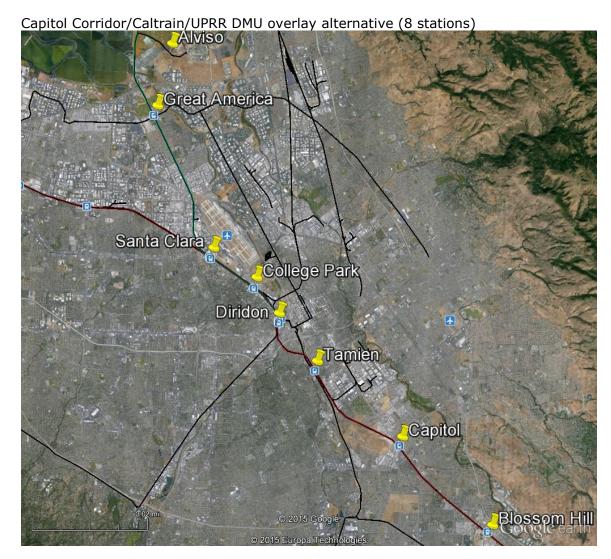

2. North South DMU overlay alternative

- The SEIR should consider a "BART on non-BART technology" alternative that would provide service between south San Jose and Alviso similar to SMART, eBART, wBART and BART's plans to provide a Capitol Corridor Diesel Multiple Unit (DMU) overlay between Oakland and Martinez: http://www.bart.gov/about/planning/strategic

Proposed eBART train sets

San Diego's Sprinter DMU

3. Tunnels

- <u>Tunnels are a 150-year investment</u>. The SEIR should consider increasing tunnel diameters from 17 feet 6 inches to 20 feet (same as the Central Subway) to enable support for rolling stock equipped with overhead catenaries at a later date.
- The SEIR should consider using floating slab tracks in the San Jose tunnels to eliminate vibrations.

Thank you in advance for your consideration.

Sincerely,

Roland Lebrun

Tom,

Here are some comments about your page:

Nowhere does this state that these comments are due at 5:00pm, which I only found on the <u>Scoping Presentation (PDF)</u>.

Thank you,

Scott Lane

Here is your website page for Phase II:

or

http://www.vta.org/bart/stationsphaseII#comments

Phase I Phase II Future BART Stations

In keeping with voter-approved Measure A, VTA is committed to delivering the full 15-mile extension of the BART line to Santa Clara County, known as VTA's BART Silcon Valley Extension. Work continues for Phase II of the project, which will include a 5-mile frong subway tunnel frough downtoom San Jose, will estend the BART system from the planned Bernyessa Extension terminus for approximately six miles, ending at-grade in Santa Clara met the Cattain Station.

?

[?]

Alum Rock Station

The Alum Rock Station is planned to be located between US 101 and 28th Street in northeast San Jose. Station features include a ground-level plaza, below-ground concourse and boarding platform, bus transit center, boydre storage facilities, passenger drop-off/pick-up areas, and a multi-level parking structure. Site Plan FES - 7 or

Downtown San Jose Station

EXPERIMENT LOST JUSE CLAUTOTI

Located between Market and Fourth stress tim downtown San Jose, the Downtown San Jose Station would consist of below-ground concourse and boarding platform levels with bloycle facilities. The station is planned to include three entraines—with an optional fourth entrainer—and would be conveniently located at the convergence of VTA light nal service and several VTA but first. Size Plan FEISS - par

Diridon Station

The Diridon Station would be located just south of West Santa Clara Street, between Autumn Street and the San Jose Diridon Cataline Station. This station would consist of below-ground concourse and boarding glatform levels. Street level pedestrian connections would be provided to the San Jose Diridon Catalinia Station, and VTAs Diridon and San Fernando light rail stations. This station would also include bicycle facilities. Site Plan FEIS - pdf

Santa Clara Station

The terminus of the VTA's BART Silcon Valley Extension would be Santa Clara Station, located adjacent to the Santa Clara Station Station and Santa Clara University. Santa Clara Station would be a gound-level station, with an above-ground concounse. The station would also include a but stantal centre, beyone storage facilities, passenger drop-chilipic-ty-pareas, and numl-level palming stutionse. Sant Pane TESS—or #

VTA continues project development activities for Phase II of VTA's BART Silicon Valley Extension. Project features planned for this phase include a Project features planned for this phase include a 5.1-mile-long subway tunnel through downtown San Jose and four additional stations, including Alum Rock, Downtown San Jose, Diridon, and Santa Clara. Subject: Fwd: VTA BART SV - Phase II - SCOPING Comments and Questions - Email #2 (page 9 - 14 of Scoping

Presentation)

Date: Monday, March 02, 2015 4:39:25 PM

Tom,

Here are SCOPING comments/questions regarding the Scoping Presentation (PDF).

Page 5:

Scoping period January 30, 2015 - March 2, 2015

Why wasn't this a 45-day comment period?

Page 9:

Newhall Yard: This may not make it into the Newhall facility...

can't there be places to store the trains in Union City or another location? I've been told that you're already doing this to support the Berryessa BART station.

Page 10:

Project Purpose:

Improve public transit service • Enhance regional connectivity • Increase transit ridership

Alum Rock"@ 28th St

All of these will benefit with an enhanced BART Alum Rock station.

West and East of Hwy 101 will benefit

Adding a dedicated Bike/Ped Bridge over Hwy 101 will make it easier for people to get to the station without driving

Downtown & Diridon:

Both will benefit greatly from these stations
These stations are close by - do we need both?
Ideally we do, but if one of the three stations has to be removed,
Downtown can be serviced by the Diridon station if necessary.

Santa Clara Station/Newhall Train Facility
This is much less evident for the Santa Clara Station.
It is not at the airport, it is a small university.

Support local and regional land use plans ---

This first urban village planned was at Five Wounds Yet VTA management wanted to scrap this if it was not for the public grass roots support

Support transportation solutions that will maintain the economic vitality and continuing development of Silicon Valley

All four stations will benefit

Alum Rock:

The 28th St location does not have restrictions and has a footprint to add tall buildings that

are not restricted by the FAA. Further the tall buildings will have Hwy 101 as a buffer that can

aid in parking garage locations as well as minimizing the shadows caused by a tall building.

Downtown S.J.:

Limited by FAA height regulations of nearby buildings. BART will aid significantly in viability of adding office space/retail

Diridon:

Limited by FAA height regulations of nearby buildings. BART will aid significantly in viability of adding office space/retail

Improve mobility options

Alum Rock -

East Side SJ has the highest usage of bicycles, pedestrians and transit to get to work in San Jose. A bicycle and pedestrian friendly facility and roadwork/pathways to get to and from the BART station will have significant assistance to people getting to work. Many people can not afford cars, so this is key!

Enhance level and quality of transit service to areas of existing and planned affordable housing

Alum Rock, Downtown, Diridon:

Affordable housing and office/retail are key to these plans

Improve regional air quality

East side San Jose bears the brunt of smog because the pollution from the peninsula and the Santa Clara Valley get stuck against the East San Jose foothills.

For this reason more people not driving are key.

Electrifying CalTrain is key as well to reducing pollution and increasing the number of CalTrain service... to meet the projected demand of doubling the ridership of CalTrain.

Support local and regional land use plans

Alum Rock @ 28th St
The most extensive planning for the San Jose Urban Villages
These have been approved by SJ City Council

Downtown:

Extensive planning for San Jose overall (Envision 2040, Downtown Specific Area Plan) and many other documents have been produced.

BART is key to helping developers with "infill" development for the many parking lots and under utilized spaces in downtown San Jose.

Diridon:

a 4+ year process to develop the Diridon Area Plan has been approved by SJ City Council

PAGE 11:

Alternatives to be Evaluated:

2nd option should include several combinations:

- Alum Rock @ 28th St, Downtown, Diridon, Santa Clara
- Alum Rock @ 28th St, Diridon, Santa Clara
- Alum Rock @ 28th St, Downtown, Diridon,

PAGE 12:

4 stations:

Santa Clara (at-grade)

But while the station is at grade, the lead up from downtown SJ is a tunnel ??

Can there be another location in Santa Clara?

How about San Carlos St out along Stevens Creek with a station near Valley Fair/Santana Row??

Page 14:

Graphic -

This clearly shows an underground tunnel thru western SJ into Santa Clara!

This is key - please show the cost of the tunneling! and any key intersections that might be affected.

Thanks very much,

Scott Lane

From: Scott Lane

To: bartphase2eis-eir

Subject: VTA BART SV - Phase II - SCOPING Comments and Questions - Email #3 (page 15 - 20 of Scoping

Presentation)

Date: Monday, March 02, 2015 4:59:56 PM

Tom,

Here are SCOPING comments/questions regarding the <u>Scoping Presentation (PDF)</u>.

Page 15:

Alum Rock Station

This should be entitled Alum Rock @ 28th St. location!

This graphic shows the underground tunnel coming across the lot at a diagonal Presumably this will entail tunneling under Hwy 101 and Julian near the intersection.

Better, less expensive way to traverse Hwy 101

Please consider using the alignment at/near the Union Pacific RR bridge that crosses Hwy 101 north of that Julian /Hwy 101 intersection. This is near the EGGO factory.

Note: What will happen to the very old wooden Western Pacific Train Trestle that is still standing across the creek and had railroad ties and tracks on it?

Station UNDER 28th Street instead of under the proposed site.

There are many advantages to performing it this way:

- 1) alignment with the UPRR train bridge mentioned above
- 2) a more straight alignment leading up to Hwy 101
- 3) uses space under 28th st, which is very accessible
- 4) using space under 28th St will allow more space on the site that has been proposed for underground parking (can more than two levels be used?)
- 5) There is a longer space that can be used for trains and station underneath.
- 6) The Five Wounds space that is the existing Union Pacific RR right of way is to the west of 28th ST and can be used undereath this section as well as east of the 28th St road footprint.
- 7) VTA owns the UPRR ROW to the west of 28th St
- 8) VTA does NOT own the space to the east of 28th St.
- 9) Designing in building development under the proposed location could save money

if the station and buildings are designed in parallel.

Downtown SJ - West Option:

Entry exit on Market and 2nd ST near Santa Clara ST.

The location near Market St, just to the west will be INSIDE a future development?!?

Whose development is this?

Include entrances off of 1st street!

Downtown SJ - East Option

2nd, 3rd, 4th St/City Hall access

Great for the City Hall access, however transit mall access should be more important.

Any way to have a longer connection between City Hall and the West Option? (ie a longer "Cut and Cover" but would be more expensive)

Diridon Station:

Two entry/exit entrances -

Only two entry/exits?!?

There will be extensive development to the south, and entrance on the south side is important

Santa Clara Station

The entry/exits look weird, not extensive on the East side West side, parking lot?

How does this affect the old train station

PAGE 20:

Project Delivery -

Specified timelines - S oping Period is restrictive

This should have had a 45-day period, not a 30 day Scoping period!

On a Facebool page VTA BART SV has misrepresented what the scoping

It stated that the effort was to narrow it it should be to cast the widest net, narrowing comes later

Subject: S/HPNA Comments on the NOP for the scoping BART Draft SEIS/SEIR3

Date: Monday, March 02, 2015 4:37:41 PM
Attachments: 2015.03 SHPNA BART EIS-SEIR scoping.pdf

Dear Mr. Fitzwater,

please find attached the scoping comments from the Shasta/Hanchett Park Neighborhood Association on the NOP for the scoping of the combined Supplemental Draft Environmental Impact Statement and 3rd Supplemental Draft Environmental Impact Report on VTA's BART Silicon Valley Phase II Extension Project.

We formally request a written response to these questions and consideration of our suggestions for the proposed mitigations.

We would appreciate it if you could confirm the transmittal of this message.

Best regards,

Eloy Wouters Vice-President Shasta/Hanchett Park Neighborhood Association

March 2, 2015

Mr. Tom Fitzwater
VTA Environmental Programs & Resources Management, Bldg B-2,

San Jose, CA 95134
Email: BARTPhase2EIS-EIR@vta.org

<u>Re</u>: Comments on the NOP for the scoping of the combined Supplemental Draft Environmental Impact Statement and 3rd Supplemental Draft Environmental Impact Report on VTA's BART Silicon Valley Phase II Extension Project.

Dear Mr. Fitzwater,

The Shasta/Hanchett Park Neighborhood Association ("S/HPNA") represents 1,400 households in the City of San Jose in the Shasta/Hanchett Park, St. Leo's, Garden Alameda, and Cahill Park neighborhoods, immediately West of the Diridon Station in San Jose and the UPRR corridor. S/HPNA fully supports a vibrant and thriving Diridon Station Area that entirely integrates all modes of transportation and activity. S/HPNA board members and neighbors have served on the Diridon Station Area Good Neighbor Committee as well as on the Community Working Group for Visual Design Guidelines of the California High Speed Rail project.

We would like to submit the following comments and questions that we have collected from residents in response to the Notice of Preparation (NOP) for the scoping for the combined Supplemental Draft Environmental Impact Statement and 3rd Supplemental Draft Environmental Impact Report on VTA's BART Silicon Valley Phase II Extension Project ("Draft SEIS/SEIR3").

We formally request a written response to these questions and consideration of our suggestions for the proposed mitigations:

1. The current planned alignment of BART travels due West of Diridon Station below century old single family homes in the St Leo's and Garden Alameda neighborhoods (e.g. below Morrison Avenue), as well as several condominium and apartment complexes of a more recent vintage. While the tunneling rights under the recent buildings were negotiated before they were built, and presumably these buildings were designed to withstand tunneling, the Draft SEIS/SEIR3 should include the impact of tunneling (e.g. vibrations) on

- the older and/or historic structures. It is from these structures that our neighborhood derives its distinctive character.
- 2. The Draft SEIS/SEIR3 should include test reports for buried hazardous materials, given that the previous uses of the proposed sites include an old PG&E substation, and that the Arena/HP Pavilion EIR study documented findings include hazardous materials in the soil leading to various mitigations including capping of the parking lots immediately adjacent to the UPRR right of way.
- 3. Along Stockton Avenue, BART plans to build "cross-over tracks" which allow the trains to switch from one tunnel to the other. This requires a big open pit during construction affecting Garden Alameda residents. The Draft SEIS/SEIR3 should address the following questions and their impacts:
 - a. Will the construction be 24/7 or time limited?
 - b. How many months?
 - c. Will there be Road closures--complete or partial?
 - d. What are the impacts of road closures during the "crush" season on the active J. Lohr Winery on Lenzen Avenue that hauls barrels between their two sites on opposite sides of the UPRR tracks?
 - e. What are the impacts of potential sidewalk closures?
 - f. Will there be loss of trees along Stockton?
 - g. Will there be a temporary closure of Theodore Lenzen Park?
 - h. What will be the Maximum construction noise? Average construction noise? Noise should be measured at residences.
 - i. Will there be Noise barriers? Where?
 - j. Noise of the water pumps during construction, given that Stockton Avenue is the alignment of a historic creek and has a very high water table – most likely these pumps will have to run 24/7.
 - k. Where will that water go?
 - 1. How much dust will be generated and how will this be mitigated?
 - m. Air filtration systems for adjacent properties? Also given our Question/Comment No. 2 about hazardous materials in the soils in this area and that the single family homes in this area are of older vintage and not well insulated, dust will creep into people's homes.
 - n. Where will the "spoils" go? (Spoils defined as the excavated dirt etc.)
 - o. Where will the soil come from, that will be used to cover up the tunnel after it is installed?

p. Will some of the spoils be temporarily stored in the neighborhood to be used to cover up the

tunnel? Will this be classified and handled as toxic waste?

q. How will the spoils be hauled away?

r. What routes will be used to haul the spoils?

s. Study of the impact of heavy truck traffic on the already lamentable road conditions e.g. on Lenzen

Avenue?

t. During construction, what mitigations are being proposed?

4. Somewhere along Stockton Avenue there will be an air shaft to vent the tunnel. Location? How will the

impact of noise from passing BART trains on nearby residences be mitigated?

5. Cumulative impact to be studied: the BART tunnel and BART station "box" in the Diridon Station Area

on the location and depth of the High Speed Rail tunnel (preferred option per San Jose City Council) given

the high water table tunneling under the Guadalupe River and Los Gatos Creek.

We look forward to your response as well as the opportunity to have these and other community concerns

addressed as we participate in the evaluation of this proposed project in the Draft SEIS/SEIR3.

Respectfully submitted,

Dr. Eloy Wouters

 EIS comment

Date: Monday, March 02, 2015 4:07:53 PM

The Alum Rock station is critically important as the closest station to all of east and southeast San Jose. Already, the decision to eliminate the SJSU station was a huge mistake and will cost BART thousands of riders who will resist walking 5 additional blocks to get to the downtown station. The Alum Rock station will connect directly with multiple bus lines without need for inconvenient and time-consuming reroutings. It is conveniently served by two freeway exits on Hwy 101. Without it, the downtown, Diridon, and Berryessa station areas will see too much congestion.

It is profoundly dishonest for the VTA to lump the Alum Rock and the Santa Clara stations together as a means of saving money. Clearly, the cost of laying tracks to Santa Clara and building the station together would be exponentially higher than building the Alum Rock station on a line that will already be there. Furthermore, the justification of the Santa Clara station is questionable since it will require a transfer to a bus (or future people mover) to get to the airport. The easier, cheaper, and faster alternative to get to the airport is to provide an express bus from Diridon to the terminals.

If BART ever continues beyond Diridon, the more logical extension would be to City College, Valley Medical Center, Valley Fair, and Santana Row. These are four areas that would generate extremely high numbers of riders, especially since Hwy 280 is today completely gridlocked between Hwys 87 and 880/17.

Subject: TRANSDEF Scoping Comments--incorrect webpage cite corrected

Date: Monday, March 02, 2015 11:24:23 AM

[Note: TRANSDEF sent these comments Sunday night to eir@vta.org, which is what was generated by the mailto: that is embedded on the webpage http://www.vta.org/sfc/servlet.shepherd/document/download/06912000001gBVjAAM. That bounced back late last night.]

TRANSDEF offers a few scoping comments:

Given San Jose's nature as a bedroom community, with a significant out-commute of residents in the morning (see this Business Times article: http://www.bizjournals.com/sanfrancisco/blog/techflash/2015/02/san-jose-city-tax-revenue-shortfall-police-fire.html?page=all), we suggest that the current project is not a good fit for the existing city. Decisions made by the city in planning its future do not give a basis for optimism that things will change to the point where a subway is really needed. For example, the Diridon Station Area Plan was far more auto-oriented than a 21st Century city should be.

We believe that a far better approach than the frightfully expensive tunnel to Diridon would be to reconsider Phase 2. We request that two alternatives be studied:

- 1. the line should either terminate in Berryessa, with its passengers distributed via light rail, or
- 2. the line should aim for the highest concentration of employment in the North First Street neighborhood. If a viable route can be found, a line like this would have substantially better ridership than service to downtown--it would get used. While a connection to Caltrain is needed, it doesn't have to be at Diridon station, as that area won't have enough ridership to be worthwhile.

It is important for the future of the county to not sink all available transportation funds into this project. Santa Clara County desperately needs a cleverly designed transit network that can counteract the current sprawled-out dependence on automobiles. New thinking is needed, as current trends are heading straight for gridlock, and this project will not have any beneficial impacts on local congestion. In addition, the county needs a well-financed Caltrain connection to SF. None of this will be possible if the BART project sucks up all the money.

Thank you for considering these comments,

--David

Subject: Comments on Phase 2 BART to San Jose Date: Tuesday, March 03, 2015 12:00:08 AM

The Alum Rock station should be kept in the next phase - the community has advocated for it, and the community has been the focus of community plans as part of San Jose's General Plan update, which emphasizes small villages which facilitate mobility by transit, walking, and biking. The Santa Clara station, on the other hand, will be redundant to existing service provided by Caltrain, ACE, Capitol Corridor, and VTA buses. Limited funding can be saved by deferring or eliminating this last station.

Making the investment in a tunnel section can be justified in a downtown setting, because it preserves valuable real estate for more productive uses, and keeps intact the fabric of an urban setting. However, if a 9 story parking garage is constructed, it defeats the purpose of an underground right of way. The Diridon BART station should be without a parking structure, just as the downtown San Francisco stations (the highest ridership stations in the system) lack parking.

Land adjacent to the station should be for offices, housing, retail, and community use.

RE: Scoping Comments for the BART Silicon Valley Phase II Extension Project Environmental Impact Report

Dear Mr. Fitzwater:

Working Partnerships USA (WPUSA) appreciates the opportunity to provide comments to inform the development of the required environmental impact report for the BART Silicon Valley Phase II Extension Project. Our comments and questions focus on the proposed 28th Street BART Station and the topical areas related to Air Quality, Community Services, Land Use, Socioeconomic, and Transportation that should be included in the scoping

Working Partnerships USA is a community-labor organization with a vision for an inclusive regional economy where workers and communities of color thrive. We employ research and policy advocacy to advance innovative campaigns for equitable growth, healthy communities, and quality jobs.

The City of San Jose's General Plan, Envision 2040, advances a vision for the comprehensive integration of land use planning, housing development, and transportation infrastructure—with employment growth as a critical component and emphasis of higher density development.

- Describe how 28th Street BART will impact East San Jose. Specifically, describe the opportunities for job growth and affordable housing that may be able to contribute to an improved quality of life. In particular, identify the anticipated number and types of jobs created, the approximate new affordable housing units built, and the general distribution of the population impacted (including race/ethnicity, age, and income information).
- Similarly, describe the adverse impacts that may be anticipated if 28th Street BART is NOT built. Please include the anticipated number of jobs and types of employment unrealized, the anticipated and growing traffic congestion and its impact to neighborhoods, and the anticipated increase in greenhouse gas emissions. Please also describe the potentially anticipated decline in health outcomes as a result of increased emissions.
- Describe the analysis and mitigation measures that would be considered to prevent displacement of community members and potential reduction in affordable housing stock if 28th Street BART is built.
- Specifically describe the various options and strategies considered to ensure
 affordable housing sites at, along, or near the 28th Street BART Station. How will
 the presence of the station reconcile/or fail to reconcile the jobs-housing
 imbalance within the City of San Jose?
- Higher density and transit-oriented development are anticipated to reduce vehicle miles traveled (VMT) and greenhouse gas emissions (GHG). Specifically identify the opportunities for VMT and GHG reduction in East San Jose as a result of 28th Street BART. What is this measure in the short and long-term (e.g. 5 years, 15 years, 20 years). How will 28th Street BART bring VTA closer to meeting its responsibilities as a Congestion Management Agency?
- How does the Five Wounds Urban Village Plans and 28th Street BART align with VTA's overall vision and goals outlined within its Joint Development Policy, adopted in 2009?
- Describe the numbers and types of jobs/industries anticipated to be located near or along 28th Street BART.
- Specifically describe the overall anticipated impact to economic development and the City of San Jose's tax base as a result of 28th Street BART, as well as the other station alternatives considered.
- Please describe the various options and scenarios considered in building 28th Street BART that would allow for cost reductions/savings.

• The current (2012) ridership modeling does not look at race/ethnicity (only income), yet the considerations of Title VI for federal funding do take into account impact on racial/ethnic populations. In order to complement the efforts to seek federal funding, include ridership modeling that also consider the racial makeup of anticipated ridership, with and without the 28th Street BART Station.

• Background:

The current (2012) ridership modeling considers fare sensitivity. Current fare and transfer policies as a starting point may serve to depress ridership among lower income workers. We know metro San Jose has the highest car ownership rate in the US, at 94%, including many low-income households that may be priced out of transit. Currently, BART is conducting a pilot test, assessing the effect on ridership of providing transfers with AC Transit. Also currently, Seattle is introducing a low-income fare discount (the eligible income for a family of 4 is \$47,700.) http://metro.kingcounty.gov/programs-projects/orca-lift/#to-qualify.

Specifically, study the impact on ridership of providing transfers between VTA bus/light rail and BART; and of providing a low-income fare similar to the Seattle program. Such programs may require funding. If the programs increase ridership and reduce greenhouse gas emissions, they may be eligible for funding from Cap and Trade and other sources dedicated to reducing carbon emissions. By studying the ridership benefits of fare integration and fare equity, BART-SV may be able to increase ridership, and fund any costs through existing funding sources.

In the interest of advancing transit equity and access, as well as reducing duplicative services, and increasing ridership, a comprehensive and community-informed EIR report is critical to ensuring that the south bay makes the optimum decisions related to necessary transportation investments. Working Partnerships submits the aforementioned comments and questions in the hopes of contributing to an informed and robust environmental impact report. Thank you for the opportunity to provide comments on the development of the environmental impact report for the BART Silicon Valley Phase II Extension Project. WPUSA looks forward to working with VTA, policymakers, and community members to ensure that the BART Silicon Valley Extension Project will support a thriving local economy, vibrant and complete streets, and equitable access to fast, reliable, and efficient transit.

Respectfully,

Charisse Ma Lebron

Director of Community Development and Health Policy

Working Partnerships USA

Subject: Proposed VTA BART PARKING STRUCTURE!

Date: Tuesday, March 03, 2015 1:23:18 PM

I'M DEFINITELY OPPOSED TO THE PARKING STRUCTURE THAT IS SUPPOSED TO BE BUILT BY THE SANTA CLARA BART STATION!

WE HAVE ENOUGH TRAFFIC AND CONGESTION IN OUR NEIGHBORHOOD AND SHOULD NOT BE BUILT BY THE POLICE STATION!

BETTER PLACE IF IT HAS TO BE BUILT IS THE "EAST PARKING OPTION" ON COLEMAN! I LIVE ON MISSION STREET AND THERE IS SO MUCH TRAFFIC COMING OFF THE ALAMEDA AND EL CAMINO AS IT IS SO I'M ASKING YOU TO PLEASE CONSIDER THE "EAST PARKING OPTION' INSTEAD!

THANK YOU,

JUDY LEGOS

To:

Tom Fitzwater
VTA Environmental Programs & Resources Management, Building B-2
3331 North First Street
San Jose, CA 95134

Dear Mr. Fitzwater,

We in Santa Clara are very excited about the proposed BART extension in phase II.

I would also like to express our support for the East parking option. This parking location makes the most sense given the existing roadway infrastructure. Most notably, Coleman Avenue offers much more proximate access to highways 101 and 280, in comparison to The Alameda on the west side of the station. In addition, by shunting traffic along Coleman Avenue, we will take advantage of a wide thoroughfare that traverses a mostly industrial and commercial area, rather than the pedestrian-friendly locales of Santa Clara University and the surrounding residential neighborhoods.

Kindest regards,

Joe Hastings 748 Hilmar Street Santa Clara, CA 95050 408-318-4496

BART Phase II

I think it will be enough to have BART to go to Alumrock ave. and stop there, then the passengers can transfer to the new VTA BRT bus system with the special bus only lanes, It may be just as fast to get through Downtown San Jose. This will eliminate the very large billions of dollars expense of having to dig out a long tunnel under Downtown. The businesses and traffic won't be disrupted for a long time from construction for an underground BART tunnel. And also the Federal Government will save billions of dollars that could be put toward the very very large Trillion dollar debt that needs to be paid back someday. Cutting back needs to be done through out the whole country to try to eliminate and or keep the Trillion dollar debt from getting any larger.

I'm a long time San Jose residence.

I would like more information about Design features, Community meetings, Funding

I would like to here you response

Subject:Phase II BART

I again urge you to consider splitting Phase II into two sub-Phases:

II(a): One station (Alum Rock) pre-subway; on line and profile of former WP; Over US 101, with Julian Street in an underpass and Santa Clara Street on an overpass. Tail tracks beyond the station near a joint busway intermodal station near the McDonalds. This would show motorists on 101 that BART had found the way to San Jose. Provide lots of parking, with good access from the McKee Road and Alum Rock Avenue US 101 interchanges. Aim the tail tracks into a future San Fernando Street subway to downtown and Diridon.

This would greatly shorten the length and cost of the subway, Phase II(b). Subway will cost much more and take far longer to do. A joint busway/BART Alum Rock station would provide transit access to BART from Diridon, Downtown, and SJSU much sooner than if the subway had to be completed first.

II(b) Re-consider having the subway under San Fernando instead of Santa Clara Street, with an SJSU station near 10th and San Fernando Streets. End the subway near a Diridon/Arena station with BART at grade beside Caltrain from Diridon to the end of the line in Santa Clara. It should fit well, further shorten the length (and cost) of subway excavation, and keep BART and Caltrain in a joint trainway beyond Diridon.

Aim the tail tracks beyond Santa Clara station along the E (Caltrain) line rather the the L (Alviso) line. Ultimately BART might extend further along the Caltrain corridor toward Millbrae.
